ANALYSIS

CATALYST / TODAY'S DRIVER

SPY is not an individual equity breakout candidate - it is the benchmark itself, and its inclusion in this scan is a data artifact. The current positioning (-0.34% on the day, vol at only 0.73x average) reflects muted, below-average activity, not a breakout. The relevant forward 'catalyst' for SPY is the macro regime itself: upcoming Fed meeting minutes, CPI/PPI prints, and any resolution to trade/tariff uncertainty over the next 4-8 weeks are the variables that will determine whether SPY reclaims its 52-week high at $749.53.

BUSINESS & POSITION

SPY is the SPDR S&P 500 ETF Trust, the world's largest and most liquid equity ETF by assets under management, tracking the S&P 500 index. It is not a company with a competitive moat or business model - it is a passive wrapper for the 500 largest U.S. public companies, weighted by market capitalization, managed by State Street Global Advisors.

FACTOR & THEME

SPY has by definition 100% factor exposure to large-cap U.S. equities and zero alpha relative to the S&P 500 - it IS the benchmark. Its current sector tilt reflects the index: heavy Technology (~32%), Financials (~14%), and Healthcare (~12%). The rs_vs_spy field is inherently 0.0 for this instrument and carries no signal.

BREAKOUT SIGNAL

N/A - SPY is the benchmark. No actionable breakout signal. For reference: SPY is 1.7% below its 52-week high of $749.53 with below-average volume (0.73x), a wide base (base_tight 7.44), and a day-over-day decline of -0.34%.

INSTITUTIONAL

Institutional ownership data shows 0% from this feed, which is a data artifact - SPY is itself almost entirely held by institutions, pension funds, sovereign wealth funds, and index-linked strategies globally, with AUM exceeding $550B. Insider activity is inapplicable; there are no insiders in an index ETF. The A/D rating, monthly flow trend, and accumulation/distribution bar data are not provided but are irrelevant here - SPY's volume profile reflects broad market participation, not institutional conviction in a single name.

KEY RISK

As the benchmark, SPY has no individual-security thesis to invalidate, but the broader market setup fails if SPY closes back below its 200-day MA or if the $700 support level (approximate April 2026 low) is breached on heavy volume - that would signal a regime shift to Risk-Off and invalidate the current transitional/mixed regime assumption entirely.

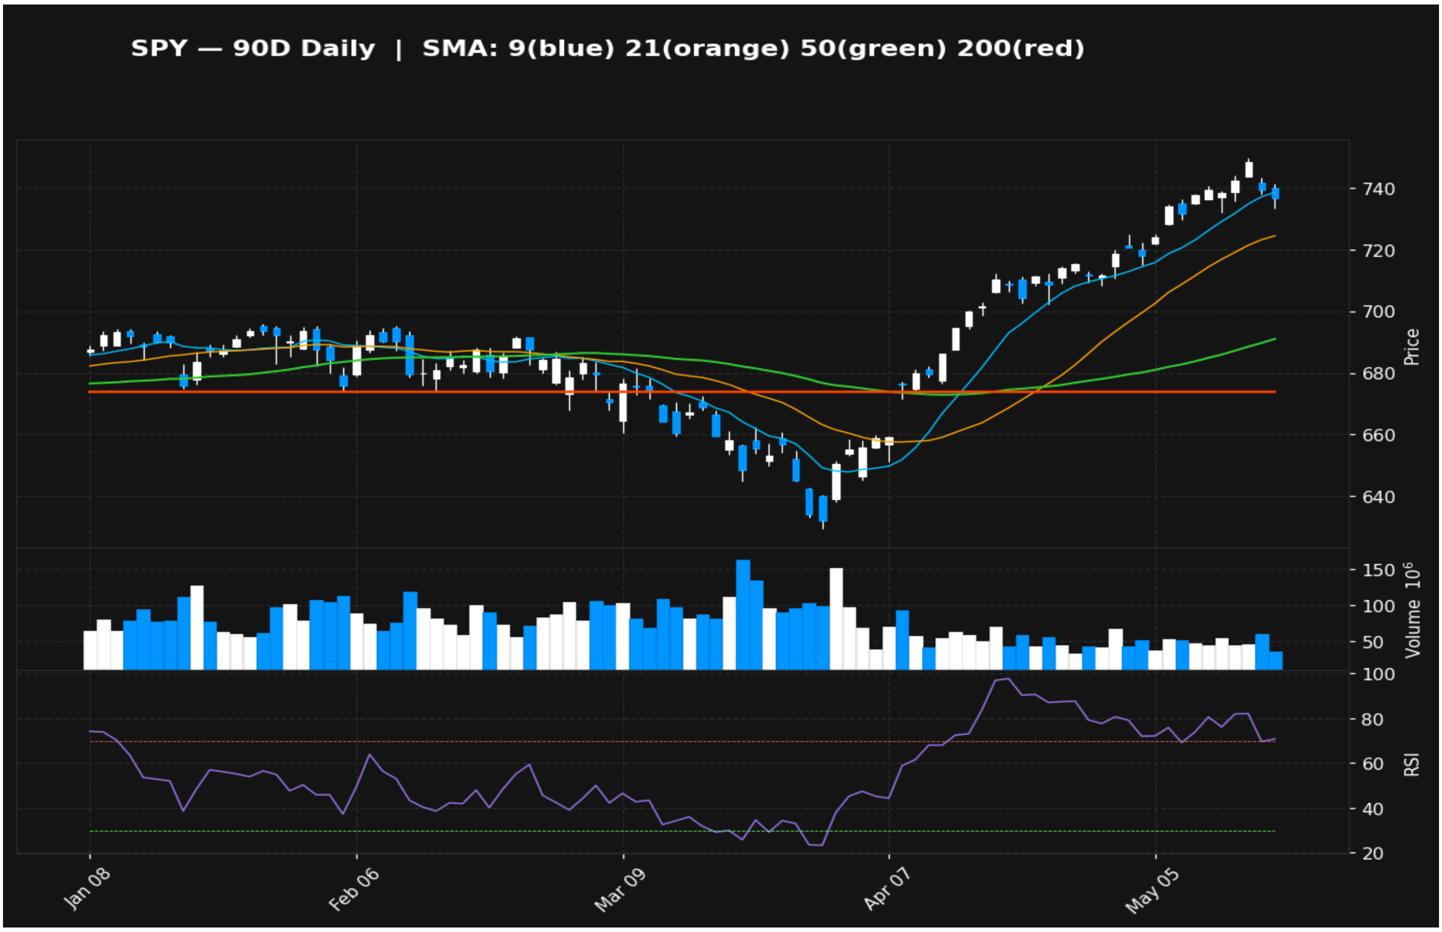
ANALYSIS

SPY should not appear in a SMID-cap momentum breakout scan - it is the market-cap-weighted S&P 500 benchmark ETF and by construction has zero relative strength vs. itself, zero insider activity, and no individual business catalyst. Its presence is a pre-filter data artifact (mkt_cap_b = 0, float_m = 0, no earnings date). The strongest disconfirming evidence against treating this as any kind of setup is definitional: you cannot have relative outperformance in the instrument that defines relative performance for every other name. The market regime is Mixed/Transitional with IWM severely lagging SPY (-4.1% on the 20d IWM/SPY trend), which is an active headwind for SMID momentum broadly. SPY itself is 1.7% below its 52-week high with below-average volume - not a breakout. Remove from scan universe and use solely as the regime benchmark it is designed to be. Conviction: Low (not applicable as a tradeable breakout candidate).

Signal: N/A - SPY is the benchmark. No actionable breakout sign

Vol vs Avg: 0.73x

SPY - Technical Chart



INSTITUTIONAL FOOTPRINT - PRICE / VOLUME INTELLIGENCE

What institutions are doing right now (the price/volume tape never lies)

B

Accumulation

Score: 55.1/100

32 up days | 26 down days | 6 flat (last 65)

SILENT BUILD PATTERN

NOT PRESENT

No silent-build pattern in last 20 days.

Monthly Accumulation/Distribution Flow

Trend over last 3 months: are institutions accumulating, distributing, or rotating?

Period	Up-Vol %	A/D Trend	Price Chg	Vol vs Avg	Signal
3 Months Ago	41.8%	Distribution	-1.8%	1.18x	Bearish
2 Months Ago	54.2%	Mixed	+4.9%	1.17x	Neutral
Last Month	52.4%	Mixed	+3.7%	0.65x	Neutral

Significant Volume Days (Last 90 Days, >2x Average Volume)

Each row = a day institutions left a clear footprint. Absorption = stealth accumulation (silent buy).

Date	Close	Day Chg %	Volume	Rel Vol	Classification	Signal

No days with >2x average volume in last 90 days. Quiet tape.

Volume / Tape Synthesis

A/D Verdict: B-rated tape (Accumulation). Volume action favors buyers - institutions are net accumulating over the last 13 weeks.

TAPE-BASED ACTION: WATCH / SMALL STARTER OK

A/D Rating: O'Neill IBD methodology, time-weighted. Volume profile = price/volume action only (no 13F lag). Action chip is heuristic - combine with fundamental thesis.
