ANALYSIS

CATALYST / TODAY'S DRIVER

Current move appears driven by sector rotation into nuclear/SMR theme amid AI data-center power demand and bipartisan energy policy tailwinds. Forward catalyst path: potential design certification progress updates (NRC milestone), partnership/offtake announcements with hyperscalers or utilities, and earnings on Aug 10 where guidance on commercialization timeline will be scrutinized.

BUSINESS & POSITION

Terrestrial Energy is developing the Integral Molten Salt Reactor (IMSR), a Generation IV small modular reactor (SMR) technology targeting industrial heat and power applications. The company positions itself as a fast-follower in the SMR race, leveraging molten-salt technology for higher-temperature heat output than light-water SMRs, theoretically enabling cheaper hydrogen production and process heat for heavy industry.

FACTOR & THEME

Direct exposure to nuclear renaissance theme driven by AI infrastructure power demands (Microsoft, Google, Amazon all exploring nuclear for data centers) and decarbonization mandates. Secular tailwind accelerating: U.S. ADVANCE Act streamlined NRC approvals, bipartisan support, and DOE loan programs. However, SMR theme is crowded and speculative-most names remain pre-revenue with multi-year regulatory timelines.

BREAKOUT SIGNAL

Close above $9.49 on volume >5.2M shares (2.1x the 2.45M 20d avg)

INSTITUTIONAL

Institutional ownership at 23.9% with 104 holders suggests modest but growing buy-side interest; below the 50-90% typical of mature small-caps, leaving room for incremental buyers if a major catalyst hits. Volume surge to 2.11x on a +3.94% day indicates elevated interest but lacks the 3-5x signature of true institutional block accumulation. Zero insider buying in the last 12 months is a notable absence-management not backing the stock with personal capital despite the 70% drawdown from $31.50 highs raises conviction questions. Short interest at 8.4% with only 1.2 days-to-cover provides minimal squeeze fuel.

EARNINGS

EARNINGS IN 70D

EARNINGS CONTEXT

Next earnings Aug 10 (70 days out). As a pre-revenue developer, EPS/revenue consensus is not meaningful; the print will center on NRC design certification progress, partnership pipeline updates, and cash runway. No established beat/miss history to anchor expectations-guidance and milestone commentary will drive post-earnings volatility.

KEY RISK

Thesis invalid if the stock closes back below the 20-day MA (~$8.80 estimated) or if the Aug 10 earnings call reveals material delays in NRC certification timeline or failure to secure a marquee offtake partner. Regulatory risk is binary: any NRC setback or adverse safety review would crater the stock. The 70% drawdown from highs signals the market has already repriced execution risk; another disappointment leaves little support.

ANALYSIS

Strongest disconfirming evidence: prox_52w at only 30.1 means the stock is 70% below its highs-this is not a breakout, it's a mid-recovery bounce from a collapsed base. The base_tight of 4.05 is extremely wide (textbook VCP is <2.0), indicating no institutional absorption or coiling. RS line is NOT at new high despite strong 12-week outperformance (+32.1 vs SPY), suggesting prior leadership has not been reclaimed. Zero insider buying over 12 months while the stock trades at $9.49 vs $31.50 highs is a red flag-if management believed in near-term catalysts, they would be buying aggressively at these levels. Volume at 2.11x is elevated but far from the 3-5x institutional accumulation signature. The Aug 10 earnings is 70 days away-too distant to drive sustained follow-through without an intervening catalyst, and no partnership/regulatory announcements are on the visible calendar. This is a thematic sympathy move in a crowded, speculative SMR cohort, not a genuine institutional-quality setup. Conviction: Low.

Signal: Close above $9.49 on volume >5.2M shares (2.1x the 2.45

Vol vs Avg: 2.11x

Recent 13D / 13G Filings (last 12 months)

13D = activist stake, board pressure, takeover | 13G = passive 5%+ holder, lower-conviction

No 13D or 13G filings against this company in the last 12 months.

Ownership Interpretation

Smart Money: Top holders skew 3 passive / 7 active. No high-conviction smart-money names identified.

Concentration: Top 10 hold 10% - diffuse ownership, lower single-fund risk.

13D/13G: No 5%+ stake filings in last 12 months. Either nobody's gone over the threshold or the company is too large for 5% to be common (>$10B caps rarely see 13D/G activity).

Smart-money classifications are heuristic. 13F filings are reported with a 45-day lag. Cross-reference with WhaleWisdom or Fintel for production decisions.

INSTITUTIONAL FOOTPRINT - PRICE / VOLUME INTELLIGENCE

What institutions are doing right now (the price/volume tape never lies)

B

Accumulation

Score: 61.4/100

33 up days | 29 down days | 2 flat (last 65)

SILENT BUILD PATTERN

NOT PRESENT

No silent-build pattern in last 20 days.

Monthly Accumulation/Distribution Flow

Trend over last 3 months: are institutions accumulating, distributing, or rotating?

Period	Up-Vol %	A/D Trend	Price Chg	Vol vs Avg	Signal
3 Months Ago	43.2%	Distribution	-20.1%	0.60x	Bearish
2 Months Ago	61.1%	Accumulation	+23.0%	0.95x	Bullish
Last Month	63.4%	Accumulation	+30.7%	1.44x	Bullish

Significant Volume Days (Last 90 Days, >2x Average Volume)

Each row = a day institutions left a clear footprint. Absorption = stealth accumulation (silent buy).

Date	Close	Day Chg %	Volume	Rel Vol	Classification	Signal
2026-05-06	$8.62	+19.9%	9,180,700	3.1x	ACCUMULATION	Bullish
2026-04-23	$7.74	-6.5%	4,485,900	2.1x	DISTRIBUTION	Bearish
2026-04-17	$7.61	+7.3%	5,154,400	2.6x	ACCUMULATION	Bullish
2026-03-20	$6.12	+0.0%	6,634,500	4.1x	ABSORPTION	Stealth Buy

Volume / Tape Synthesis

A/D Verdict: B-rated tape (Accumulation). Volume action favors buyers - institutions are net accumulating over the last 13 weeks.

Trajectory: Regime change: Distribution -> Accumulation. Money has rotated FROM exit TO entry - highest-conviction window for breakout entries.

Vol Footprint: Last 90d: 2 accumulation, 1 absorption, 1 distribution day(s) at >2x average volume. Net bullish - accumulation outpacing distribution.

TAPE-BASED ACTION: ACCUMULATE / SIZE UP ON BREAKOUT

A/D Rating: O'Neill IBD methodology, time-weighted. Volume profile = price/volume action only (no 13F lag). Action chip is heuristic - combine with fundamental thesis.
