ANALYSIS

CATALYST / TODAY'S DRIVER

Breakout driven by +5.3% energy sector leadership and crack spread expansion. Forward catalyst: November 6 earnings expected to reflect sustained refining margin strength amid global supply tightness; Q3 typically strong seasonal period for refiners.

BUSINESS & POSITION

Delek operates integrated downstream energy assets including refineries in Texas, Arkansas, and Louisiana, plus logistics and retail operations. The company benefits directly from widening crack spreads (the margin between crude oil input cost and refined product output prices).

FACTOR & THEME

Pure play on energy sector leadership (+6.9% vs SPY this week). Refining margins have expanded on tight diesel inventories and Gulf Coast capacity constraints. Theme momentum accelerating with crude supply discipline and geopolitical premium intact.

BREAKOUT SIGNAL

Close above $75.67 on vol >196% of 20d avg

INSTITUTIONAL

Volume 1.96x average signals institutional participation in energy rotation. Float of 60M allows block buyers to take meaningful positions without excessive slippage. No insider buying in last 90 days but not unusual for this sector; institutions leading the move.

EARNINGS

EARNINGS IN 59D

EARNINGS CONTEXT

November 6 earnings will mark Q3 print - historically the strongest seasonal quarter for refiners due to summer driving demand carryover. Last earnings history and consensus not provided in dataset, but refining margins are key metric to watch.

KEY RISK

Thesis invalid on a close back below $70.50 (the breakout pivot from late August consolidation), or on any material crack spread compression ahead of the November 6 print. Refining margins are cyclical and can reverse quickly.

ANALYSIS

Five technical criteria met: vol 1.96x, prox_52w 97.8%, rs_vs_spy +59, base_tight 2.01, riding Energy sector leadership. Strongest disconfirming evidence: RS line NOT at new high despite proximity to 52w highs, suggesting this is late-cycle participation rather than early leadership. However, the +59 SPY outperformance and sector tailwind in a Mixed regime earn the grade. Conviction: Medium - strong setup but macro regime is transitional and RS line signal missing.

Signal: Close above $75.67 on vol >196% of 20d avg

ANALYSIS

CATALYST / TODAY'S DRIVER

Breakout on +7.55% earnings reaction today (September 8). Forward catalyst is limited: the next earnings not until December quarter print (~90 days out). This is a post-earnings momentum extension trade, not a pre-event positioning opportunity.

BUSINESS & POSITION

ABM provides integrated facility services including janitorial, electrical, HVAC, and engineering to commercial, industrial, and institutional clients. The business model is labor-intensive with long-term contract revenue but modest margin leverage.

FACTOR & THEME

Exposure to commercial real estate recovery and return-to-office trends. Labor cost normalization after pandemic-era wage inflation would be a margin tailwind. Theme is decelerating as office occupancy has plateaued; not a secular growth vector.

BREAKOUT SIGNAL

Close above $50.60 on vol >292% of 20d avg

INSTITUTIONAL

Volume 2.92x is strong post-earnings institutional validation. The +7.55% gap-and-go suggests the print and/or guidance exceeded expectations materially. Small float (57.9M) creates follow-through opportunity if buyers remain engaged. No insider buying in last 90 days.

EARNINGS

EARNINGS TODAY

EARNINGS CONTEXT

Reported Q3 today (September 8). The +7.55% reaction implies a material beat and/or guidance raise. Next catalyst is Q4 earnings in early December - roughly 90 days away, leaving a long catalyst-free window.

KEY RISK

Thesis invalid on a close back below $47.25 (the pre-earnings base high), signaling the entire earnings reaction was a one-day event. The wide base (4.09 ATR range) and lack of forward near-term catalyst create high probability of mean reversion within 2-3 weeks.

ANALYSIS

Strong earnings reaction with volume confirmation and prox_52w 99.4%, but the catalyst is NOW exhausted (earnings already reported). RS line not at new high, base is wide (4.09), and the next earnings is 90+ days away. Strongest disconfirming evidence: no forward catalyst path and Mixed macro regime reduce follow-through probability. This is a short-term momentum trade, not a durable setup. Conviction: Low.

ANALYSIS

CATALYST / TODAY'S DRIVER

Breakout on +3.78% with strong 3-month RS (+26%) suggests sustained accumulation ahead of clinical data or regulatory milestones. Forward catalyst: November 12 earnings may include pipeline updates; more importantly, watch for FDA submissions or Phase 3 readouts for apitegromab (SMA) in Q4 2026.

BUSINESS & POSITION

Scholar Rock develops novel biologics targeting the bone morphogenetic protein (BMP) and growth differentiation factor (GDF) pathways for serious diseases including spinal muscular atrophy (SMA) and cancer. Lead candidate apitegromab targets SMA, a rare neuromuscular disorder with high unmet need.

FACTOR & THEME

Biotech sector exposure with binary clinical/regulatory catalyst risk. The +26% 3-month RS in a Mixed macro regime signals strong theme-specific momentum. GLP-1 and obesity are hot themes but Scholar Rock is orthogonal - focused on rare disease neuromuscular and oncology.

BREAKOUT SIGNAL

Close above $57.42 on vol >162% of 20d avg

INSTITUTIONAL

Volume 1.62x is modest but RS outperformance of +21.8 vs SPY indicates sustained buying over weeks, not a single-day spike. Float of 104M is large for biotech, providing liquidity for institutional blocks. No insider buying in last 90 days - not unusual pre-data lock for clinical-stage biotech.

EARNINGS

EARNINGS IN 65D

EARNINGS CONTEXT

November 12 earnings (65 days out) will likely focus on apitegromab Phase 3 enrollment and timeline updates. Biotech earnings are less about revenue (pre-commercial) and more about pipeline progress and cash runway. Consensus data not provided.

KEY RISK

Thesis invalid on a close back below $53.00 (the August consolidation pivot), or on any adverse clinical data or FDA feedback. Biotech carries binary event risk: a negative Phase 3 readout or regulatory setback can erase 40-60% of market cap in a session.

ANALYSIS

Strong RS (+21.8 vs SPY, +26% 3m) with prox_52w 93% and tight base (2.07 ATR). Strongest disconfirming evidence: RS line NOT at new high despite proximity, volume only 1.62x (below institutional surge threshold), and no imminent binary catalyst before November earnings. Biotech in Mixed regime without a near-term data readout is speculative. Conviction: Medium.

Signal: Close above $57.42 on vol >162% of 20d avg

Vol vs Avg: 1.62x
