Stop: $88.50 (base low and 50-day MA support - 3.8% risk)

CATALYST INTELLIGENCE

EARNINGS

August 05 - Street expects ~$1.95 EPS on ~$360M revenue. Forward EPS $7.91 implies significant acceleration from Amundi integration synergies. Last 4Q pattern: beat/beat/beat/beat (serial beater). Management raised FY guidance on Q1 call citing AUM inflows and margin expansion. 76.7% revenue growth reflects full Amundi consolidation. Catalyst Impact: Earnings / High.

BUSINESS & POSITION

Victory Capital is a diversified global asset management firm with ~$180B AUM across multiple investment franchises (USAA, RS Investments, Trivalent), serving institutional and retail clients via mutual funds, ETFs, and separately managed accounts. The company has grown aggressively through M&A (Amundi US deal closed 2024) and is a consolidator in the fragmented asset management space.

FACTOR & THEME

Direct play on Financials sector leadership (+5.1% 20d, top sector). Benefits from rising equity markets (AUM growth), potential Fed rate stability improving duration demand, and secular shift toward active management alternatives as passive becomes crowded. Peer read-through: T. Rowe Price, Franklin Templeton showing similar strength - asset manager beta to risk-on is working.

NEWS FLOW

Amundi US integration tracking ahead of schedule with $100M+ synergy realization. Strong net flows into fixed income franchises as duration demand returns. No recent M&A announcements but management has flagged continued tuck-in appetite. Russell reconstitution had minimal impact (already mid-cap). Catalyst Impact: Corporate / Medium.

INSTITUTIONAL

Classic quiet accumulation signature: volume contracting cleanly (42.9%) while price holds within 1% of all-time highs with RS line confirming. Float is tight (48.6M) relative to institutional demand in a risk-on Financials rotation. Inst_own data unavailable from this feed. No insider activity in last 60 days - baseline for asset managers where insider windows are restrictive.

KEY RISK

Thesis invalid on a close below $88.50 (base low / 50-day MA confluence), or if Q2 print shows AUM outflows or margin compression from Amundi integration friction. Customer concentration in USAA relationship (~30% AUM) and equity market beta cuts both ways.

Textbook VCP: clean volume stair-step contraction, RS line at new high, price within 1% of pivot, in the leading sector of a risk-on tape. Financials leadership provides thematic tailwind, serial beat history de-risks the Aug 5 catalyst, and tight float amplifies breakout velocity. Strongest bear case: forward P/E compression if market rotates defensive and AUM outflows accelerate - but current flows data contradicts this. Macro regime (large-cap leadership) is modest headwind for $5.75B name but Financials leadership offsets. Conviction: High.

ENTRY TRIGGER

Close above $61.25 on volume >200% of 20-day avg (660K+ shares)

Target: $70.00 (14% measured move, also analyst consensus target zone)
Stop: $57.00 (base low - 4.7% risk)

CATALYST INTELLIGENCE

EARNINGS

August 11 - Street expects ~$1.55 EPS on ~$600M revenue. Forward P/E 9.1x is attractive vs. EM bank peers. 37.3% earnings growth reflects NIM expansion and credit normalization. Last 4Q pattern: beat/beat/inline/beat. ROE 18% and net margin 35.9% are best-in-class for LatAm banks. Catalyst Impact: Earnings / Medium.

BUSINESS & POSITION

Intercorp Financial is Peru's largest financial conglomerate, operating Interbank (4th largest bank), Interseguro (leading insurer), and Inteligo (wealth management). Dominant retail banking franchise with 25%+ market share in consumer lending and insurance premiums in a dollarized, commodity-driven economy.

FACTOR & THEME

EM Financials recovery play benefiting from copper price strength (Peru is #2 global producer), political stabilization post-Boluarte administration, and declining Peruvian inflation enabling BCRP rate cuts. Low beta (0.54) provides portfolio diversification. Financials sector leadership (+5.1%) creates sympathy bid even for EM names. Sentiment in LatAm financials accelerating - Credicorp (BAP) breakout confirms peer strength.

NEWS FLOW

Peru central bank (BCRP) cut rates 25bp in June, supportive of loan demand. Copper prices holding >$4.50/lb supports Peruvian macro and tax receipts. No company-specific news but sector tailwind from BAP strength. Limited US analyst coverage creates information asymmetry opportunity. Catalyst Impact: Macro / Medium.

INSTITUTIONAL

Exceptional volume dry-up (60.2%) with RS line at new high signals accumulation in a thinly-traded name (29.5M float, 330K avg daily volume). The illiquidity is a feature for patient accumulators but creates execution risk on breakout. Inst_own data unavailable. No insider activity - expected for foreign-domiciled holding company.

KEY RISK

Thesis invalid on close below $57.00 (20-day MA and base low), or on Peruvian political instability / sol devaluation. Customer concentration in Peru (single-country risk), commodity price sensitivity to China demand, and thin US liquidity (1.1 days-to-cover) create gap risk.

Cleanest volume contraction in the scan (60.2%), RS line at new high, leading sector exposure, attractive valuation (9x forward). EM Financials recovery theme has momentum with copper support and rate cuts. Strongest bear case: Peru political risk is ever-present and thin float creates execution/gap risk on any LatAm headline. Risk-on regime supports but large-cap leadership bias means this outperforms best if EM rotation accelerates. Conviction: Medium-High (execution risk caps it).

Close above $43.92 on volume >140% of 20-day avg (1.55M+ shares)

Target: $50.00 (15% measured move to round number resistance, also pre-2022 high zone)

Stop: $41.00 (base low - 5.1% risk)

CATALYST INTELLIGENCE

EARNINGS

July 22 - IMMINENT CATALYST: Earnings in 9 days. Street expects ~$0.52 EPS on ~$680M revenue. Note: Forward P/E 20.3x > trailing 12.9x suggests Street modeling deceleration - but backlog visibility contradicts this (potential beat setup). Last 4Q: beat/beat/beat/inline. Guidance maintained at Analyst Day. Catalyst Impact: Earnings / High.

BUSINESS & POSITION

Oceaneering provides engineered services and products for the offshore energy industry, including ROVs (remotely operated vehicles), subsea hardware, and deepwater intervention services. Also has growing Aerospace & Defense segment (NASA life support systems) and non-energy manufacturing. Market leader in ROV fleet globally.

FACTOR & THEME

Direct play on offshore energy capex supercycle - deepwater projects have 7+ year visibility given recent FIDs (Guyana, Brazil, Gulf of Mexico). Defense/Aerospace segment (~15% revenue) provides diversification and government contract stability. Energy sector lagging (-3.1% materials proxy) but offshore subsector is differentiated from shale. TechnipFMC, Subsea 7 peer strength confirms thesis.

NEWS FLOW

Awarded $150M+ in subsea umbilical contracts (Brazil pre-salt) in Q2. NASA extended ISS life support contract through 2030. ROV utilization rates at multi-year highs per industry data. Short interest elevated (8.4%, 5 days-to-cover) creates squeeze potential on beat. No recent insider activity. Catalyst Impact: Corporate / High.

INSTITUTIONAL

Volume dry-up (45.2%) with RS at new high ahead of imminent earnings = classic pre-catalyst accumulation. The 98.4M float is liquid enough for institutional participation. Elevated short interest (8.4%) with 5 days-to-cover sets up squeeze dynamics if print beats. Inst_own data unavailable.

KEY RISK

Thesis invalid on close below $41.00 (11-day base low) or guidance cut at July 22 print. Bear case: forward P/E expansion to 20x suggests Street expects margin pressure - if utilization peaks, multiple contracts. Offshore capex is back-end loaded; any oil price collapse <$65 WTI pressures customer budgets.

Strong VCP structure with imminent high-impact catalyst (earnings in 9 days), RS line confirming, and short squeeze potential (8.4% SI, 5 days-to-cover). Base is loose (5.02) - prevents A-grade. Offshore energy capex theme is durable but Energy sector lagging broadly creates headwind. Strongest bear case: Street modeling deceleration (forward > trailing P/E) may be correct if utilization peaks. Position sizing should reflect binary earnings risk. Conviction: Medium.

ENTRY TRIGGER

Close above $55.75 on volume >130% of 20-day avg (4.6M+ shares)

Target: $65.00 (18% move to prior resistance and round number)

Stop: $52.00 (base low and 50-day MA - 5.2% risk)

CATALYST INTELLIGENCE

EARNINGS

Last reported June 17 - next print likely late September (FQ2). June quarter: modest beat, management noted improving GPU trends and stabilizing wholesale prices. Forward P/E 18x, PEG 0.54 attractive for category leader. -5.2% earnings growth reflects normalization from pandemic highs, not structural decline. Catalyst Impact: N/A (no imminent print).

BUSINESS & POSITION

CarMax is the largest used vehicle retailer in the US with 240+ stores, integrated omnichannel platform, and captive auto finance arm (CarMax Auto Finance). Differentiated by no-haggle pricing, nationwide inventory access, and scale advantages in reconditioning and logistics.

FACTOR & THEME

Consumer discretionary play benefiting from used vehicle price stabilization post-pandemic normalization. Rate sensitivity: CAF margins expand as Fed holds/cuts. Tariff risk on new vehicles could drive substitution to used. Consumer Cyclical sector neutral in current regime. Carvana (CVNA) competitor strength suggests demand recovery broadening.

NEWS FLOW

MATERIAL INSIDER CLUSTER: 5 open-market buys by 4 distinct insiders totaling $770K in last 60 days. This is a top-tier conviction signal - management putting meaningful personal capital at base lows indicates confidence in recovery trajectory. No senior C-suite in the cluster (insider_senior=0) but breadth across 4 insiders is significant. Used vehicle prices (Manheim Index) stabilized in June. 10.1% short interest creates squeeze setup on continued fundamental improvement. Catalyst Impact: Insider / High.

INSTITUTIONAL

INSIDER CLUSTER UPGRADES THIS SETUP: 5 buys / 4 insiders / $770K is exactly the pattern that precedes institutional recognition in turnaround situations. The 52% volume contraction with price holding near highs while insiders accumulate is textbook. 131M float is institutionally liquid. Short interest 10.1% with 3 days-to-cover provides fuel. Inst_own data unavailable but name is widely held in value/GARP mandates.

KEY RISK

Thesis invalid on close below $52.00 (base low confluence with 50-day MA), or if Manheim Index resumes decline indicating renewed wholesale pressure. High debt/equity (307.79) and CAF credit losses are the structural bear case. RS line NOT at new high - relative underperformance vs. market is a yellow flag.

Insider cluster ($770K, 4 distinct insiders) is a material upgrade signal that offsets mediocre RS line and lack of imminent earnings catalyst. Volume dry-up is strong (52%), base is reasonably tight (3.4), and short squeeze setup (10.1% SI) provides asymmetry. Strongest bear case: RS line not at new high means market is not confirming the insider view yet - this is a show-me setup that needs price confirmation. Per GRADE UPGRADE RULE: insider_cluster=10 meets threshold, but absence of senior officers and risk-on/large-cap leadership regime prevents full upgrade. B-grade appropriate. Conviction: Medium.

ENTRY TRIGGER

Close above $134.77 on volume >150% of 20-day avg (1.8M+ shares)

Target: $155.00 (15% measured move, also 2023 high zone)
Stop: $125.00 (round number and base support - 4.2% risk)

CATALYST INTELLIGENCE

EARNINGS

July 30 - Earnings in 17 days. Street expects ~$3.50 EPS on ~$1.1B revenue. Forward P/E 9.0x is optically cheap for a brand with 20%+ core growth. TTM EPS negative (-$1.62) reflects HEYDUDE goodwill impairment - non-cash, ignore. Guidance: FY raised at Q1 for Crocs brand, HEYDUDE outlook cautious. Catalyst Impact: Earnings / High.

BUSINESS & POSITION

Crocs designs and markets casual footwear (iconic clog, sandals) globally, plus the HEYDUDE brand acquired in 2022. Direct-to-consumer channel (~45% revenue) drives margin expansion. Brand has transcended functional footwear to fashion/lifestyle status via collaborations (Balenciaga, Bad Bunny).

FACTOR & THEME

Consumer discretionary play with brand momentum characteristics - Crocs core business growing double-digits while HEYDUDE integration matures. Tariff exposure exists (Vietnam/China manufacturing) but competitor parity limits relative impact. Consumer Cyclical sector neutral. Deckers (DECK), On Holding (ONON) peer strength confirms athletic/casual footwear demand.

NEWS FLOW

Q1 Crocs brand +14% organic, HEYDUDE -17% (expected - rightsizing distribution). New collaboration pipeline (Post Malone, Lightning McQueen) driving social engagement. 12.8% short interest with 3.9 days-to-cover creates squeeze potential on strong print. Inventory levels normalized per management. No insider activity. Catalyst Impact: Corporate / Medium.

INSTITUTIONAL

Volume dry-up is soft (14.7%, not strict contraction) but RS line at new high and 47.9M float (tight for $6.5B cap) suggests quiet positioning. Elevated short interest (12.8%) indicates crowded bear thesis on HEYDUDE - any upside surprise triggers mechanical covering. Inst_own data unavailable.

KEY RISK

Thesis invalid on close below $125.00 (20-day MA and round number support), or if HEYDUDE decline accelerates beyond guidance. 120% debt/equity from acquisition leverage is structural risk if brand momentum stalls. Tariff escalation could pressure gross margins.

RS line at new high and imminent earnings catalyst (17 days) with short squeeze setup (12.8% SI) are compelling. Volume dry-up is soft (14.7%, vol_w2 < vol_w1 breaks the stair-step) - prevents A-grade. Crocs brand strength is real but HEYDUDE drag creates execution uncertainty. Strongest bear case: HEYDUDE write-down risk if Q2 trends worse than guided - Street is already skeptical (high SI) so bar may be low. Conviction: Medium.

ENTRY TRIGGER

Close above $81.89 on volume >120% of 20-day avg (3.7M+ shares)

Target: $95.00 (16% move to prior resistance zone)
Stop: $76.00 (base low - 5.6% risk)

CATALYST INTELLIGENCE

EARNINGS

July 29 - Earnings in 16 days. Street expects ~$1.15 EPS on ~$650M revenue. Forward P/E 12.4x with PEG 0.79 attractive for marketplace leader. TTM growth anemic (3.1% rev) but comps ease in H2. Last 4Q: inline/miss/beat/beat - inconsistent. Catalyst Impact: Earnings / High.

BUSINESS & POSITION

Etsy operates the leading marketplace for unique, handmade, and vintage goods with 90M+ active buyers. Also owns Reverb (musical instruments) and Depop (Gen-Z resale). Two-sided network effects and seller lock-in create defensible moat in artisan/craft niche that Amazon cannot replicate.

FACTOR & THEME

Consumer internet recovery play - GMS trends stabilizing after post-COVID normalization. Benefits from anti-Amazon sentiment and localism trends. Technology sector lagging (-1.9%) is headwind. High beta (1.84) amplifies moves both directions. Pinterest, Shopify peer action mixed - e-commerce recovery uneven.

NEWS FLOW

16.9% short interest is highest in scan - crowded bear thesis on GMS deceleration. Management initiated $1B buyback in Q1, providing support. Depop turnaround showing early signs (UK growth). No insider activity. Technology sector weakness and RS line NOT at new high are yellow flags. Catalyst Impact: Corporate / Medium.

INSTITUTIONAL

High short interest (16.9%, 4.5 days-to-cover) creates asymmetric squeeze potential if print stabilizes GMS narrative. Volume dry-up (35.4%) is moderate. RS line not at new high despite +36% vs SPY suggests relative strength fading at resistance - concerning. 82.6M float is liquid. Inst_own data unavailable.

KEY RISK

Thesis invalid on close below $76.00 (base low and 50-day MA), or if GMS decline accelerates in Q2 print. Negative book value (P/B -6.7) reflects aggressive buybacks funded by debt - balance sheet risk if growth doesn't inflect. Technology sector lagging creates factor headwind.

Imminent catalyst (16 days), extreme short interest (16.9%) for squeeze, and attractive valuation (PEG 0.79). However, RS line NOT at new high despite strong 20d relative performance signals distribution at resistance - smart money may be selling into strength. Technology sector lagging adds headwind. Strongest bear case: GMS deceleration is structural (post-COVID hangover permanent) and negative book value limits financial flexibility. This is a show-me setup. Conviction: Low-Medium.

ENTRY TRIGGER

Close above $18.62 on volume >120% of 20-day avg (4.1M+ shares)

Target: $22.00 (18% move to prior 2024 resistance)

Stop: $17.00 (50-day MA - 6.2% risk)

CATALYST INTELLIGENCE

EARNINGS

Last reported May 5 - next print likely early August (date not yet set). Q1 showed 105% earnings growth on GEC divestiture gains and cost cuts. Forward P/E 10.4x, PEG 0.76 attractive for stabilized business. Revenue declining (-3.2%) as GEC rolls off - expected. Catalyst Impact: N/A (no imminent print).

BUSINESS & POSITION

Pitney Bowes provides mailing, shipping, and financial services technology. Post-GEC (Global Ecommerce) divestiture, company is streamlined to core SendTech (postage meters) and Presort (mail presorting) businesses with stable cash flows and improving margins.

FACTOR & THEME

Turnaround/transformation play post-GEC sale. Benefits from e-commerce shipping demand in Presort segment. Industrials sector neutral. Low short interest (0.1%) indicates bears have covered - turnaround skeptics capitulated.

NEWS FLOW

GEC divestiture completed, balance sheet improved. Activist pressure has subsided post-transformation. No recent material news. 0.1% short interest is de minimis - no squeeze catalyst. No insider activity in last 60 days. Catalyst Impact: N/A.

INSTITUTIONAL

Strong RS (+48.2% vs SPY) and tight base (2.52) with volume dry-up (40.8%) suggests accumulation in a turnaround that's working. But RS line NOT at new high despite massive relative outperformance indicates prior overhead supply. 133.4M float is liquid but name is under-followed post-transformation. Inst_own data unavailable.

KEY RISK

Thesis invalid on close below $17.00 (50-day MA and round number), or if core SendTech meter volumes accelerate decline faster than Presort growth. Negative book value limits financial flexibility. NO CATALYST IN SIGHT - being early without a catalyst is being wrong.

Tightest base in scan (2.52), strong volume dry-up (40.8%), and massive relative strength (+48.2%). However, RS line NOT at new high despite outperformance signals overhead supply, and NO IDENTIFIABLE FORWARD CATALYST (earnings date not set, no corporate events). Per research discipline: a clean VCP coil without a catalyst is a watch, not a buy. Strongest bear case: this is a melting ice cube business (mail volumes structurally declining) dressed up by one-time GEC gains. Conviction: Low (needs catalyst to upgrade).
