ANALYSIS

Volume surge near 52W high (97%) is technically notable, but RS vs SPY is negative at -2.9%, the 3-month RS is also negative (-1.8%), RS line is NOT at new high, and the base is wide (2.57). Most critically: Utilities are lagging badly in this macro environment (Energy +12.7%, Healthcare +4.5% vs SPY; Utilities not mentioned), sector rotation is against this, and there is zero identifiable catalyst-no news, no insider buying, no clear forward event. The volume spike on a 0.25% gain suggests forced buying (index rebal or fund window-dressing) rather than conviction accumulation. In a Mixed/Transitional regime with VIX elevated and small-caps underperforming, a lagging-sector defensive utility with negative relative strength and no catalyst is a statistical anomaly, not a momentum setup. Conviction: Low
