ANALYSIS

CATALYST / TODAY'S DRIVER

Breaking out on earnings today with RS line at new high, riding the Energy sector's +10.6% weekly outperformance. Forward catalyst: expanding crack spreads into fall refining season (Sep-Oct) and potential capital return program announcements over next 60-90 days given improving cash generation.

BUSINESS & POSITION

PBF Energy operates petroleum refineries across East Coast and Gulf Coast, with 1M+ barrels/day capacity producing gasoline, diesel, and jet fuel. Company benefits from wide crack spreads (refining margin between crude input and refined product output) and strategic positioning in supply-constrained East Coast markets.

FACTOR & THEME

Direct beneficiary of Energy sector rotation (leading +9.9% this week), elevated diesel demand from reshoring/manufacturing build-out, and geopolitical premium in refined products. Theme momentum accelerating as Energy breaks multi-quarter consolidation.

BREAKOUT SIGNAL

Close above $73.42 on vol >214% of 20d avg

INSTITUTIONAL

Volume surge to 2.14x on earnings validates institutional participation. Large float (100M) requires significant capital deployment to move - today's breakout reflects real accumulation, not retail FOMO. No insider buying data in last 60 days.

EARNINGS

EARNINGS TODAY

EARNINGS CONTEXT

Earnings reported today (July 30) - likely beat on strong crack spreads. Company has history of volatile quarterly swings tied to commodity pricing; forward guidance on Q3 margins will be critical for continuation.

KEY RISK

Thesis invalid on close back below $65 pivot or if crack spreads compress sharply into Q3 (monitor 3-2-1 crack spread index weekly). Commodity-driven businesses face rapid sentiment reversal risk.

ANALYSIS

Five of six A-grade criteria met: RS line new high, prox_52w 99.2%, vol 2.14x, rs_vs_spy +67.3, tight base 3.54. Energy sector leadership adds +0.5 grade cushion. Disconfirming evidence: earnings TODAY means forward catalyst path depends entirely on management guidance quality and macro crack spread trajectory - no defined next catalyst date. Mixed macro regime reduces confidence in follow-through. Conviction: Medium.

Signal: Close above $73.42 on vol >214% of 20d avg

ANALYSIS

CATALYST / TODAY'S DRIVER

Breaking out on earnings today to within 0.3% of 52-week high with RS line at new high, signaling strong leadership. Forward catalyst: summer box office tailwinds extending into Q3 (August tentpole releases), potential guidance raise on theater utilization recovery, and next earnings print in late October.

BUSINESS & POSITION

Marcus operates theaters and hotels/resorts across Midwest and Southern U.S., with dual revenue streams from movie exhibition and hospitality. Company has leaned into premium theater formats (recliner seating, DreamLounger) to drive per-patron spend higher post-pandemic.

FACTOR & THEME

Taps consumer discretionary recovery theme and normalization of out-of-home entertainment spend. Post-pandemic utilization recovery story with operating leverage as fixed-cost base absorbs incremental ticket/concession revenue. Theme has tailwind from strong summer slate.

BREAKOUT SIGNAL

Close above $28.30 on vol >245% of 20d avg

INSTITUTIONAL

Volume at 2.45x confirms institutional interest in small float (22M shares). RS line new high is rare - only 2 of 14 candidates show this signal, marking true leadership. No insider buying in last 60 days.

EARNINGS

EARNINGS TODAY

EARNINGS CONTEXT

Earnings today (July 30). Consensus expectations unknown from data, but rs_3m of +61.3% suggests market has been anticipating a strong quarter. Serial beat history would confirm re-rating potential.

KEY RISK

Thesis invalid on close back below $25.50 (prior resistance zone) or weak Q3 guidance citing box office softness. Wide base (7.47 ATR ratio) suggests recent volatility - price could retreat quickly if earnings disappoint.

ANALYSIS

Meets A-grade thresholds: RS line new high, prox_52w 99.7%, vol 2.45x, rs_vs_spy +58.1. Disconfirming evidence: base_tight at 7.47 is loose (well above ideal <2.0), signaling recent choppiness rather than VCP-style coil. Earnings TODAY with no defined forward event creates catalyst vacuum post-print. Mixed macro reduces conviction in discretionary consumer names. Conviction: Medium.

Days to Cover	**-**
Inst. Own	**- (data lag)**

ANALYSIS

CATALYST / TODAY'S DRIVER

Explosive 45% move on earnings today, likely reflecting a major beat and/or guidance raise on construction and industrial capex trends. Forward catalyst: confirmation of reshoring/infrastructure spending tailwinds in next 90 days, potential contract announcements, and Q2 FY27 earnings in late October.

BUSINESS & POSITION

Columbus McKinnon designs and manufactures hoists, cranes, rigging tools, and material handling equipment for industrial and construction end markets. Company serves diversified customer base across manufacturing, infrastructure, energy, and entertainment sectors.

FACTOR & THEME

Direct play on U.S. reshoring, infrastructure build-out (IIJA spending), and industrial capex cycle recovery. Benefits from manufacturing facility construction and heavy equipment demand as supply chains localize. Theme has multi-year runway but is early/lumpy.

BREAKOUT SIGNAL

Close above $21.25 on vol >469% of 20d avg

INSTITUTIONAL

Volume surge to 4.69x on small float (27.7M) suggests genuine institutional block buying, not retail speculation. The 45% single-day move on earnings reflects material fundamental surprise. No insider buying in last 60 days.

EARNINGS

EARNINGS TODAY

EARNINGS CONTEXT

Earnings reported today (July 30). A 45% move implies a significant beat and/or guidance raise - likely FY guidance up on order book strength. Confirmation of beat magnitude and revised targets is essential for follow-through assessment.

KEY RISK

Thesis invalid if stock closes back below $18.00 (pre-earnings level) or if management tempers expectations on next conference call. One-day 45% gaps often consolidate or fade; requires 2-3 day follow-through confirmation to validate institutional absorption.

ANALYSIS

Strong setup: vol 4.69x, prox_52w 87.1%, rs_vs_spy +35.0. Disconfirming evidence: RS line NOT at new high downgrades from A; base_tight 7.75 is extremely loose, indicating a violent gap rather than a coiled breakout. Earnings TODAY creates forward catalyst gap - no defined next event beyond general sector trends. Large single-day moves often need consolidation; watch for volume exhaustion. Conviction: Low-Medium.

Above 50MA	**-**
Fwd P/E	**-**
Short %	**-**
Days to Cover	**-**
Inst. Own	**- (data lag)**

ANALYSIS

CATALYST / TODAY'S DRIVER

Breaking out near 52-week high in concert with Energy sector leadership (+10.6% weekly). Forward catalyst: Q3 earnings in late October (90 days out), potential crack spread expansion into fall refining season, and capital return announcements given improving cash flow.

BUSINESS & POSITION

CVR Energy operates petroleum refineries in Kansas and Oklahoma with integrated nitrogen fertilizer business. Dual revenue stream from refined products (gasoline, diesel) and agricultural fertilizers provides partial diversification from pure refining margin volatility.

FACTOR & THEME

Rides Energy sector rotation (top-performing sector this week). Benefits from tight refined product markets and elevated crack spreads. Fertilizer segment adds agriculture/crop cycle exposure. Energy theme momentum clearly accelerating.

BREAKOUT SIGNAL

Close above $38.25 on vol >283% of 20d avg

INSTITUTIONAL

Volume at 2.83x on small float (29M) signals real capital inflow. Tight base (2.95) confirms controlled consolidation before today's breakout. Energy sector leadership provides institutional cover for allocation. No insider buying in last 60 days.

EARNINGS

EARNINGS IN 90D

EARNINGS CONTEXT

Next earnings October 28 (90 days out). Forward EPS/revenue consensus unknown from data. Long runway to next print requires sustained sector momentum to maintain breakout.

KEY RISK

Thesis invalid on close below $35.50 or if crack spreads compress into Q3 (monitor 3-2-1 crack weekly). Commodity exposure creates earnings volatility risk; fertilizer segment adds agricultural commodity sensitivity.

ANALYSIS

Four of six criteria: vol 2.83x, prox_52w 91.8%, tight base 2.95, strong sector tailwind (+0.5 grade). Disconfirming evidence: rs_vs_spy at only +12.6 shows lagging relative strength vs. peer PBF (+67.3); RS line NOT at new high keeps this from A-grade. Earnings 90 days away creates forward catalyst void. Energy sector leadership is strong but may already be crowded. Conviction: Medium.

Signal: Close above $38.25 on vol >283% of 20d avg

ANALYSIS

CATALYST / TODAY'S DRIVER

Breaking out post-earnings (reported yesterday) to 92.5% of 52-week high, likely on beat and/or positive guidance tied to upstream activity levels. Forward catalyst: sustained oil/gas drilling activity into Q3, potential contract announcements, next earnings in late October.

BUSINESS & POSITION

Cactus manufactures wellhead equipment and pressure control systems for oil and gas drilling and production. Company benefits directly from upstream drilling activity levels and completion intensity in U.S. shale basins.

FACTOR & THEME

Leveraged to U.S. oil/gas production growth and drilling activity recovery. Taps Energy sector leadership and benefits from rig count expansion and well completion demand. Theme momentum tied to crude pricing and drilling economics.

BREAKOUT SIGNAL

Close above $59.47 on vol >216% of 20d avg

INSTITUTIONAL

Volume at 2.16x on moderate float (58.9M) confirms institutional participation post-earnings. Tight base (3.84) relative to recent volatility suggests controlled accumulation. Energy sector leadership (+10.6% weekly) provides macro tailwind. No insider buying in last 60 days.

EARNINGS

REPORTED

EARNINGS CONTEXT

Reported July 29 (yesterday). Breakout today suggests beat and/or positive guidance on drilling activity outlook. Specific beat magnitude and revised targets unknown from data.

KEY RISK

Thesis invalid on close back below $53.00 (prior consolidation low) or if WTI crude breaks below $70 (drilling economics deteriorate). Oilfield services stocks are highly cyclical and volatile to commodity price swings.

ANALYSIS

Solid setup: vol 2.16x, prox_52w 92.5%, tight base 3.84, Energy sector tailwind. Disconfirming evidence: rs_vs_spy at only +3.8% shows weak relative strength despite Energy leadership - peer names are outperforming far more. RS line NOT at new high. Earnings already reported, creating forward catalyst gap until next print in 90+ days. Conviction: Low-Medium.

Signal: Close above $59.47 on vol >216% of 20d avg

ANALYSIS

CATALYST / TODAY'S DRIVER

Breaking out on earnings today, likely reflecting path to profitability or improved loss ratios in property insurance. Forward catalyst: Q3 earnings in late October, potential partnership announcements with reinsurers or distribution channels, and insurance pricing cycle trends into year-end.

BUSINESS & POSITION

Hippo is a digital-first home insurance provider using technology and data analytics to underwrite policies and improve customer experience. Company targets millennial/Gen-Z homeowners with IoT-enabled risk prevention (smart home device integration).

FACTOR & THEME

Taps insurtech digitization theme and property insurance pricing cycle (hardening market supports margins). Financial Services sector is in top-three leaders this week (+3.0% vs SPY), providing sector tailwind. Theme has multi-year runway but is execution-dependent.

BREAKOUT SIGNAL

Close above $33.25 on vol >206% of 20d avg

INSTITUTIONAL

Volume at 2.06x on small float (22M) suggests institutional interest in growth story. Financial Services sector leadership (+3.0% weekly) provides allocation tailwind. No insider buying in last 60 days.

EARNINGS

EARNINGS TODAY

EARNINGS CONTEXT

Earnings today (July 30). Consensus unknown from data. Insurtech names are binary on path-to-profitability narratives; today's move likely reflects improved unit economics or loss ratio compression.

KEY RISK

Thesis invalid on close back below $30.00 or if loss ratios deteriorate (watch combined ratio disclosure). Pre-profitable insurtech faces execution risk and potential equity dilution if cash burn persists.

ANALYSIS

Meets B thresholds: vol 2.06x, prox_52w 85.3%, rs_vs_spy +23.1, Financial Services sector tailwind. Disconfirming evidence: base_tight at 5.41 is loose; RS line NOT at new high. Earnings TODAY creates catalyst gap post-print. Small-cap insurtech has high beta and execution risk; mixed macro regime is headwind for speculative growth. Conviction: Low.

Signal: Close above $33.25 on vol >206% of 20d avg

Vol vs Avg: 2.06x
