ANALYSIS
CATALYST / TODAY'S DRIVER
All-time high breakout following strong clinical momentum in GPCR-targeted drug platform. Forward catalyst: November 9 earnings will mark second post-IPO print and any clinical pipeline update or partnership announcements could extend the move through year-end.
BUSINESS & POSITION
Septerna is a clinical-stage biotech developing therapeutics targeting G protein-coupled receptors (GPCRs) using a proprietary native protein screening platform. The company's lead programs address endocrine, metabolic, and inflammatory disorders-large TAM categories with significant unmet need.
FACTOR & THEME
Direct play on biotech innovation, particularly GPCR drug discovery (a historically difficult but high-value target class representing ~35% of FDA-approved drugs). Theme momentum is accelerating as precision medicine and novel target classes gain institutional favor in 2026.
BREAKOUT SIGNAL
Close above \$45.00 on vol >3.0x 20d avg
INSTITUTIONAL
Volume 3.09x average on breakout to new all-time high suggests institutional accumulation despite recent IPO status. Float is tight at 23.9M, and RS line at new high confirms this is a true relative strength leader. No insider buys in last 60 days, but given recent IPO lockup dynamics this is not unusual. The +78.6% RS vs SPY over 12 weeks places this in top-decile leadership.
EARNINGS
EARNINGS IN 90D
EARNINGS CONTEXT
Next earnings November 9. As a clinical-stage company, consensus will focus on cash runway, trial enrollment, and pipeline milestones rather than revenue. No established beat/miss history yet given recent public listing.
KEY RISK
Thesis invalid on close below \$40.00 (round-number support ~12% below current), or on any adverse clinical trial data or partnership setback that undermines platform credibility ahead of the November print.
ANALYSIS
All-time high breakout with RS line at new high, explosive 12-week RS (+78.6), and volume confirmation on a tight float. Strongest disconfirming evidence: base_tight at 4.8 is wider than textbook VCP (>2.0 threshold) and the stock is in Healthcare, a leading sector, but trails Energy's absolute momentum. However, the combination of ATH, rs_line_new_high, sector tailwind, and 90-day runway to next catalyst earns this. Conviction: High.
Signal: Close above \$45.00 on vol >3.0x 20d avg

ANALYSIS
CATALYST / TODAY'S DRIVER
Explosive 22% breakout on 21x volume with RS line at new high, likely driven by sector rotation into Materials (leading sector this week at +3.0% vs SPY). Forward catalyst: November 9 earnings and any commentary on pricing power or contract wins in specialty chemicals supply chain can extend the move.
BUSINESS & POSITION
FutureFuel produces specialty chemicals (custom manufacturing, performance chemicals) and biofuels. The company benefits from industrial demand recovery and potential tailwinds from renewable fuel standards and reshoring of chemical production.
FACTOR & THEME
Materials sector leadership (+3.0% vs SPY this week) and reshoring/industrial recovery themes. Specialty chemicals are levered to manufacturing PMI expansion and infrastructure spending. Theme momentum is accelerating on near-term cyclical turn in industrials.
BREAKOUT SIGNAL
Close above \$6.00 on vol >20x 20d avg
INSTITUTIONAL
Volume 21.05x average is extreme and suggests institutions are repositioning aggressively. RS line at new high with +50.3% 12-week outperformance vs SPY is top-tier confirmation. Tiny \$280M market cap with 25M float creates squeeze dynamics. No insider buying in last 60 days; given the microcap nature, this may reflect limited free-trading insider equity.
EARNINGS
EARNINGS IN 90D
EARNINGS CONTEXT
Next earnings November 9. Consensus unavailable for microcap; focus will be on margin trends, specialty chemical contract pipeline, and biofuel segment performance. No recent beat/miss data in feed.
KEY RISK
Thesis invalid on close back below \$5.50 (prior consolidation resistance), or on any margin compression or demand slowdown commentary at the November print. Micro-cap liquidity risk on any reversal.
ANALYSIS
Exceptional volume surge (21x), RS line at new high, and +50.3% 12-week RS place this in rare-air leadership territory. Strongest disconfirming evidence: base_tight at 6.31 is very wide (well above 2.0 VCP threshold), indicating a volatile, less-controlled setup, and the microcap (\$280M) carries execution and liquidity risk. However, Materials sector tailwind (+0.5 grade boost eligible) and extraordinary technical momentum override. Conviction: Medium (high technical grade, tempered by base quality and size).
Signal: Close above \$6.00 on vol >20x 20d avg

RS Line Hi	YES
Above 50MA	-
Fwd P/E	-
Short %	-
Days to Cover	-
Inst. Own	- (data lag)

ANALYSIS
CATALYST / TODAY'S DRIVER
24% surge on 5.75x volume to within 1.2% of 52-week high, with RS line at new high. Likely catalyst is proteomics platform adoption momentum or partnership/commercialization progress. Forward catalyst: November 5 earnings will provide visibility into instrument placements, recurring consumables revenue, and pipeline expansion.
BUSINESS & POSITION
Alamar Biosciences develops ultra-sensitive proteomics platforms for early disease detection and biomarker discovery. The company's technology addresses the growing precision medicine and early diagnostics market, which is seeing accelerated adoption post-COVID.
FACTOR & THEME
Healthcare sector leadership (+3.8% vs SPY this week) and secular tailwinds in proteomics, precision medicine, and diagnostic innovation. Theme momentum is strong as life sciences tools companies benefit from pharma R&D spending and personalized medicine adoption.
BREAKOUT SIGNAL
Close above \$34.00 on vol >5.5x 20d avg
INSTITUTIONAL
Volume 5.75x on breakout near all-time high indicates institutional buying. RS line at new high and +46.8% 12-week RS vs SPY confirm leadership status. Float at 36.1M is tight for a \$2.4B market cap. No insider buying in last 60 days, but given recent IPO (proteomics space has seen several 2024-2025 listings), lockup and restricted share dynamics likely explain this.
EARNINGS
EARNINGS IN 86D
EARNINGS CONTEXT
Next earnings November 5. As a commercial-stage medical device/tools company, focus will be on instrument placements, consumables attach rates, and revenue growth vs. consensus. No established beat/miss pattern in feed; likely early in public-company lifecycle.
KEY RISK
Thesis invalid on close below \$31.50 (prior breakout pivot ~10% down), or on any disappointing revenue guidance or slower-than-expected commercialization progress at the November 5 print.
ANALYSIS
Near-ATH breakout (98.8% of 52w high) with RS line at new high, robust volume, and Healthcare sector tailwind (+0.5 grade boost). Strongest disconfirming evidence: base_tight at 4.94 is wide (well above ideal <2.0), suggesting volatility and less institutional control during the base-building phase. However, the combination of sector momentum, proteomics theme acceleration, and top-tier relative strength justifies A-grade. Conviction: Medium-High (sector and RS support, but base quality and lack of insider signal temper to medium-high vs. high).
Signal: Close above \$34.00 on vol >5.5x 20d avg

Short %	-
Days to Cover	-
Inst. Own	- (data lag)

ANALYSIS

CATALYST / TODAY'S DRIVER

7.7% move on 4.17x volume to within 2.2% of 52-week high, driven by Energy sector leadership (+5.6% vs SPY this week). Forward catalyst: November 9 earnings and any commentary on throughput volumes, distribution coverage, or M&A activity in the midstream space.

BUSINESS & POSITION

Summit Midstream owns and operates midstream energy infrastructure (gathering, compression, processing) serving upstream E&P producers. The company benefits from oil/gas production growth in its footprint regions and stable fee-based cash flows.

FACTOR & THEME

Energy sector is the week's strongest leader (+5.6% vs SPY), driven by oil price strength and midstream re-rating. Midstream MLPs/corps have benefited from capital discipline, distribution growth, and energy security themes. Momentum is accelerating on commodity tailwinds.

BREAKOUT SIGNAL

Close above \$34.00 on vol >4.0x 20d avg

INSTITUTIONAL

Volume 4.17x on a float of only 2.2M creates extreme float rotation and potential squeeze dynamics. However, RS line NOT at new high and +10.8% 12-week RS (positive but not elite) suggest this is sector-driven rather than company-specific leadership. No insider buying in last 60 days. Institutional ownership data not available in feed.

EARNINGS

EARNINGS IN 90D

EARNINGS CONTEXT

Next earnings November 9. Midstream focus is on EBITDA, distributable cash flow, and distribution coverage ratio. Recent beat/miss history not in feed; will need to assess consistency of FCF generation and leverage trends.

KEY RISK

Thesis invalid on close below \$32.00 (round-number support ~7% below), or on any distribution cut, throughput volume decline, or producer customer concentration risk disclosed at the November print. Energy sector rotation risk if oil weakens.

ANALYSIS

Strong sector tailwind (Energy +5.6%, eligible for +0.5 grade boost) and extreme float tightness (2.2M) create technical setup, but RS line NOT at new high downgrades from A to B. Strongest disconfirming evidence: +10.8% RS is modest (not top-decile), and the move appears sector-driven rather than idiosyncratic. Base_tight at 3.25 is acceptable but not VCP-quality. Conviction: Medium (sector momentum is strong, but lack of RS leadership and narrow float create execution risk on exit).

Signal: Close above \$34.00 on vol >4.0x 20d avg

Vol vs Avg	2.92x
RS Line Hi	YES
Above 50MA	-
Fwd P/E	-
Short %	-
Days to Cover	-
Inst. Own	- (data lag)

Analysis
Catalyst / Today's Driver 4.87% gain on 2.92x volume to within 4.3% of 52-week high, with RS line at new high. Likely driven by Materials sector strength (+3.0% vs SPY this week) and precious metals price action. Forward catalyst: August 14 earnings (3 days away) is the immediate catalyst; any production beat or cost guidance improvement can extend the move.
Business & Position Sinda operates in precious metals mining (specifics unclear from ticker; likely gold/silver or rare metals given 'Other Precious Metals' classification). The company benefits from commodity price tailwinds and potential supply-chain premiums in critical minerals.
Factor & Theme Materials sector leadership (+3.0% this week) and precious metals/critical minerals themes. If rare-earth or battery metals exposure, additional tailwind from energy transition and EV supply chain. Theme momentum is mixed-gold has been range-bound, but critical minerals have policy support.
Breakout Signal Close above \$17.00 on vol >2.9x 20d avg
Institutional Volume 2.92x on a tight 18M float with RS line at new high signals accumulation. +36.8% 12-week RS is strong (top-quartile). No insider buying in last 60 days. Institutional ownership data unavailable; given \$2.7B market cap, likely has meaningful institutional presence but cannot confirm from feed.
Earnings Earnings in 3D
Earnings Context Next earnings August 14 (in 3 days). Mining company metrics: production volume, all-in sustaining costs (AISC), realized metal prices, and guidance. Proximity to earnings is HIGH RISK/HIGH REWARD-if the print beats and guides up, breakout extends; if it disappoints, setup fails immediately.
Key Risk Thesis invalid on any miss or weak guidance at the August 14 print (3 days away), or on close below \$16.00. Binary event risk is elevated given earnings proximity; this is a short-duration trade into the print.
Analysis RS line at new high and Materials sector tailwind (+0.5 grade boost eligible) support the setup, but earnings in 3 days introduce binary risk that caps conviction. Strongest disconfirming evidence: base_tight at 3.07 is wider than ideal, and the proximity to earnings means the move may already be anticipatory-if the print disappoints, reversal is swift. The RS leadership and sector momentum justify B-grade, but the 3-day earnings window makes this a tactical trade, not a positional hold. Conviction: Medium (tactical into earnings, not a clean post-catalyst setup).
Signal: Close above \$17.00 on vol >2.9x 20d avg Vol vs Avg: 2.92x

Vol vs Avg	2.46x
RS Line Hi	YES
Above 50MA	-
Fwd P/E	-
Short %	-
Days to Cover	-
Inst. Own	- (data lag)

Analysis
Catalyst / Today's Driver All-time high breakout (99.3% of 52w high) with RS line at new high on 2.46x volume. Likely catalyst is REIT sector rotation on rate-cut expectations or dividend/NAV update. Forward catalyst: October 28 earnings will update book value, dividend coverage, and portfolio positioning-key metrics for mREIT valuation.
Business & Position Adamas Trust is a mortgage REIT, likely focused on agency or non-agency MBS portfolios. Performance is driven by net interest margin (NIM), book value stability, and dividend sustainability in the current rate environment.
Factor & Theme Rate-sensitive REIT play levered to Treasury curve dynamics and Fed policy. If the market is pricing rate cuts in late 2026, mREITs benefit from lower funding costs and book value stabilization. Theme momentum is mixed-rate cuts are supportive, but mREIT sector has been volatile.
Breakout Signal Close above \$10.20 on vol >2.4x 20d avg
Institutional Volume 2.46x is modest for an ATH breakout, and the large 83.2M float suggests this is not a tight-float squeeze. RS line at new high is positive, but +14.7% 12-week RS is below top-tier. No insider buying in last 60 days. Institutional ownership data unavailable; mREITs typically have moderate institutional presence.
Earnings Earnings in 78D
Earnings Context Next earnings October 28. mREIT metrics: book value per share, NIM, dividend coverage ratio, leverage, and portfolio duration positioning. The market will focus on whether the trust can sustain its dividend and grow NAV in the current rate environment.
Key Risk Thesis invalid on close below \$9.80 (prior breakout pivot ~5% down), or on any book value decline or dividend cut at the October 28 print. mREITs are highly levered to rate volatility; any hawkish Fed pivot kills the thesis.
Analysis All-time high and RS line at new high are positives, but modest volume (2.46x), wide base (6.52), and only +14.7% RS limit conviction. Strongest disconfirming evidence: mREITs are macro-sensitive and the large float (83.2M) offers limited squeeze potential. The setup is technically valid but lacks the explosive characteristics of top-tier breakouts. Conviction: Low-Medium (ATH is compelling, but sector and RS suggest this is a rate-trade, not a growth-momentum play).
Signal: Close above \$10.20 on vol >2.4x 20d avg Vol vs Avg: 2.46x

Vol vs Avg	3.43x
RS Line Hi	no
Above 50MA	-
Fwd P/E	-
Short %	-
Days to Cover	-
Inst. Own	- (data lag)

ANALYSIS
CATALYST / TODAY'S DRIVER
20% surge on 3.43x volume to within 3.6% of 52-week high, likely driven by contract win, guidance update, or sector rotation into Industrials. Forward catalyst: November 4 earnings will provide visibility into backlog, margin trends, and demand in infrastructure/energy inspection services.
BUSINESS & POSITION
Mistras provides asset protection solutions-non-destructive testing (NDT), inspection, and monitoring services for industrial infrastructure (oil & gas, aerospace, power generation). The company benefits from aging infrastructure replacement cycles and regulatory inspection requirements.
FACTOR & THEME
Industrials and infrastructure themes. NDT services are levered to capex spending in energy, utilities, and aerospace-all of which are seeing tailwinds from infrastructure bills and defense spending. Theme momentum is moderate; more cyclical than secular.
BREAKOUT SIGNAL
Close above \$18.50 on vol >3.4x 20d avg
INSTITUTIONAL
Volume 3.43x on a tight 13.3M float suggests institutional repositioning. However, RS line NOT at new high and +7.6% 12-week RS is modest, indicating the move is not driven by sustained relative strength leadership. No insider buying in last 60 days. Institutional ownership data unavailable.
EARNINGS
EARNINGS IN 85D
EARNINGS CONTEXT
Next earnings November 4. Focus will be on revenue growth, operating margins (NDT is labor-intensive), backlog trends, and any contract announcements in key verticals (energy, aero, utilities). No recent beat/miss history in feed.
KEY RISK
Thesis invalid on close below \$16.50 (prior resistance ~13% down), or on any margin compression or weak backlog commentary at the November 4 print. Cyclical exposure means any macro softness in industrial capex is a headwind.
ANALYSIS
Strong single-day move (20%) and proximity to 52w high (96.4%) are positives, but RS line NOT at new high and weak 12-week RS (+7.6%) indicate this is not a true leadership breakout. Strongest disconfirming evidence: base_tight at 5.77 is very wide, and the low RS suggests the move is event-driven (likely a contract or guidance item) rather than sustained institutional accumulation. Tight float (13.3M) offers follow-through potential if the catalyst is durable. Conviction: Low-Medium (event-driven pop, not a clean momentum setup).
Signal: Close above \$18.50 on vol >3.4x 20d avg
Vol vs Avg: 3.43x

SETUP METRICS	
Price	\$20.71
Day Change	+0.00%

Float	26M sh
RS vs SPY	+18.8%
52W Hi Prox	85%
Base Tight	3.61
Vol vs Avg	7.48x
RS Line Hi	no
Above 50MA	-
Fwd P/E	-
Short %	-
Days to Cover	-
Inst. Own	- (data lag)

ANALYSIS
CATALYST / TODAY'S DRIVER
7.3% gain on 7.48x volume into breakout zone (85.1% of 52w high), likely driven by clinical adoption momentum or partnership news in neonatal neurology devices. Forward catalyst: November 3 earnings will update on device placements, reimbursement progress, and revenue growth trajectory.
BUSINESS & POSITION
CeriBell develops point-of-care EEG devices for neonatal seizure detection. The company addresses a high-unmet-need market (neonatal brain monitoring) with a portable, easy-to-use diagnostic platform that can accelerate time-to-treatment in NICUs.
FACTOR & THEME
Healthcare sector leadership (+3.8% this week) and medical device innovation. Neonatal care devices benefit from hospital capital spending recovery and value-based care reimbursement models. Theme momentum is moderate but durable-pediatric neurology is under-penetrated.
BREAKOUT SIGNAL
Close above \$20.50 on vol >7.0x 20d avg
INSTITUTIONAL
Volume 7.48x is the highest in today's scan, indicating strong institutional interest. However, RS line NOT at new high and +18.8% 12-week RS is mid-tier, suggesting the move is opportunistic rather than sustained leadership. No insider buying in last 60 days. Float at 26.2M is tight for a \$790M market cap.
EARNINGS
EARNINGS IN 84D
EARNINGS CONTEXT
Next earnings November 3. As a commercial-stage medical device company, focus will be on unit placements, recurring consumables/service revenue, hospital adoption rates, and path to profitability. No established beat/miss pattern in feed.
KEY RISK
Thesis invalid on close below \$19.00 (prior consolidation support ~8% down), or on any disappointing placement numbers or reimbursement setbacks at the November 3 print. Device adoption is binary-NICU budgets are constrained.
ANALYSIS
Explosive volume (7.48x, highest in scan) and Healthcare sector tailwind support the setup, but RS line NOT at new high and mid-tier +18.8% RS prevent A-grade. Strongest disconfirming evidence: prox_52w at 85.1% means the stock is IN breakout zone but not yet at all-time highs, and base_tight at 3.61 is wider than ideal. The volume surge suggests something material (partnership, reimbursement milestone?), but without RS confirmation, this is a B. Conviction: Medium (volume is compelling, but need RS follow-through).
Signal: Close above \$20.50 on vol >7.0x 20d avg
Vol vs Avg: 7.48x
