Analysis
Catalyst / Today's Driver Today's 14% surge on massive 11.9x volume suggests a significant undisclosed catalyst (likely design win or partnership) that will be formalized pre-earnings. Forward catalyst is November 5 earnings (34 days out), where guidance on AI-enabled edge compute and IoT product cycles will determine durability.
Business & Position Synaptics designs human interface solutions (touchscreens, biometrics, wireless connectivity) for mobile, PC, IoT, and automotive edge devices. The company is pivoting toward AI-enabled edge processing and has design wins across multiple Tier-1 OEMs in automotive and IoT verticals.
Factor & Theme Edge AI and IoT semiconductor theme with automotive electrification tailwinds. Theme momentum is accelerating as edge inference workloads proliferate, but company-specific execution (design win announcements, margin expansion) matters more than macro sector winds given the stock's recent underperformance vs. peers.
Breakout Signal Close above \$121.04 on vol >1100% of 20d avg
Institutional Volume spike to 11.94x average is the most extreme in this cohort and indicates institutional block accumulation or leak ahead of a material announcement. No insider buying in last 90 days is a notable absence given the magnitude of today's move-suggests the catalyst is externally driven (customer win, not internal confidence). Float is compact at 38.6M, enabling rapid re-rating on incremental flows.
Earnings Earnings in 34D
Earnings Context Next print November 5. Consensus estimates and beat history unavailable in dataset, but the 34-day runway to earnings creates a binary event risk that caps position sizing. Historical volatility around prints is elevated in semi capital equipment and interface chip names.
Key Risk Thesis invalid on a close back below \$110 (prior resistance turned support), or on any pre-announcement of order pushouts or automotive design win delays ahead of the November 5 print. Wide base (6.22 ATR range) increases failure risk.
Analysis Strongest disconfirming evidence: RS line NOT at new high, 12-week RS vs. SPY is negative (-1.8), and base is exceptionally wide (6.22 vs. ideal <2.0)-this is NOT a Qullamaggie-grade technical setup. The 11.9x volume surge and sector tailwind (+6.6% Tech leadership) suggest a legitimate catalyst, but without RS confirmation or a tight base, this is speculation on an unannounced event, not a textbook breakout. In a mixed/transitional regime, reduced conviction is warranted. Conviction: Medium.
Signal: Close above \$121.04 on vol >1100% of 20d avg Vol vs Avg: 11.9x
