ANALYSIS
CATALYST / TODAY'S DRIVER
Stock nearing 52-week high on sector rotation into Financials (+1.2% vs SPY this week). Forward catalyst: Q3 earnings on October 15 (41 days out) - regional banks positioned for NIM expansion if rate environment stabilizes, and Simmons has M&A optionality as a serial acquirer in the fragmented Mid-South market.
BUSINESS & POSITION
Simmons First National is a \$23B asset regional bank operating ~230 branches across Arkansas, Missouri, Tennessee, Texas, Oklahoma, and Kansas. The company has grown through strategic M&A and serves middle-market commercial clients and retail depositors in secondary markets insulated from large-bank competition.
FACTOR & THEME
Exposed to the regional banking recovery theme as credit concerns ease and deposit costs stabilize. Financials are in favor this week (+1.2% vs SPY), benefiting from steepening yield curve tailwinds and potential rate-cut cycle positioning. M&A consolidation wave in regional banks provides secondary catalyst if Simmons announces an acquisition.
BREAKOUT SIGNAL
Close above \$23.74 on volume >1.96x of 20-day average
INSTITUTIONAL
Volume 1.96x average suggests moderate institutional interest, but the base is wide (3.92 ATR range) indicating choppy accumulation rather than tight absorption. No insider buying in the last 60 days removes a key conviction signal. Institutional ownership data not available from this feed; recommend cross-referencing 13F filings for holder concentration and recent position changes.
EARNINGS
EARNINGS IN 41D
EARNINGS CONTEXT
Next print October 15, 2026. Consensus estimates not provided in data set. Regional banks as a group have been beating on NIM stabilization and slower-than-feared loan loss provisions; if Simmons follows this pattern, the stock has 3% upside to all-time highs post-earnings.
KEY RISK
Thesis invalid on a close back below \$23.00 (the 20-day MA and prior resistance), or if Q3 earnings reveal accelerating commercial real estate loan deterioration that pressures capital ratios and forces dividend reconsideration.
ANALYSIS
Strongest disconfirming evidence: RS line NOT at new high (the #1 early-leader signal is absent), base is wide at 3.92 (far from the <2.0 VCP-tight ideal), and zero insider buying removes conviction. The stock is riding sector rotation into Financials in a Mixed macro regime where follow-through is inconsistent. It's 97.6% of 52-week high but hasn't proven it can break out cleanly. The wide base suggests institutional indecision, not quiet accumulation. Solid sector tailwind and proximity to breakout earn a B, but lack of leadership confirmation and insider silence keep conviction restrained. Conviction: Low.
Signal: Close above \$23.74 on volume >1.96x of 20-day average
Vol vs Avg: 1.96x
