CATALYST INTELLIGENCE
EARNINGS
August 4 - Next print ~Aug 4 (Q2). Last quarter delivered triple-digit revenue growth; consensus is thin given micro-cap coverage but Street modeling continued sequential digital segment recovery. Beat history is mixed but recent prints have shown improving cash flow.
BUSINESS & POSITION
Entravision is a Hispanic-focused media company operating TV/radio stations (Univision/UniMas affiliates) and a digital advertising solutions segment serving Latin American markets. Post the 2024 Meta partnership wind-down, the company has pivoted toward higher-margin local media and Adsmurai-driven digital ad tech, with revenue growth re-accelerating sharply (+114% YoY).
FACTOR & THEME
Taps into political ad spending cycle (2026 midterms), Hispanic demographic ad-dollar shift, and SMID-cap media re-rating. Sentiment in beaten-down ad-tech names is just beginning to inflect as election-year budgets get committed.
NEWS FLOW
Stock has rallied 5x off 2024 lows on operational reset and re-acceleration in digital advertising. Political ad spend ramp into the midterm cycle is the dominant forward catalyst (Industry, High impact). No imminent corporate catalyst before August earnings - the breakout would be price/volume driven into the cycle rather than headline-driven.
INSTITUTIONAL
Float of 57.6M with avg daily volume of 1.8M provides reasonable liquidity for SMID funds. Institutional ownership data is unavailable from this feed, not necessarily absent. Zero insider buying in last 60 days - no confirming smart-money signal, but the textbook vol dry-up (3.7M vs 5.4M/5.5M prior weeks) at 52W highs implies quiet accumulation.
KEY RISK
Thesis invalid on a close back below the \$8.75 base low or on a Q2 print (Aug 4) showing digital ad revenue deceleration; high financial leverage (D/E 323%) amplifies downside.

Exceptional RS (+217% vs SPY) at 52W highs with clean week-over-week volume contraction and price 1.2% from pivot - structurally A-tier on momentum. Held back to B by loose 7.95 base_tight (wide intra-base range), no near-term catalyst (earnings 75 days out), and the strongest bear case: this is a leveraged micro-cap media name running on a thin liquidity bid that can reverse violently. Conviction: Medium.

ENTRY TRIGGER
Close above \$5.86 on volume >150% of 20-day avg (>1.75M shares)
Target: \$6.85 (measured move from base; ~17% upside, also fills early 2024 gap)
Stop: \$5.35 (base low and 50-day MA convergence; ~9% risk)

CATALYST INTELLIGENCE
EARNINGS
July 28 - Next print ~Jul 28 (Q2). Forward EPS still negative (-\$0.82), revenue growth modest at +3.3%. Beat history has been inconsistent; Street is looking for gross margin progression as the key variable. No formal consensus widely published given micro-cap status.
BUSINESS & POSITION
Magnachip designs analog and mixed-signal power semiconductors (Power IC, OLED display drivers) primarily for consumer, industrial, and automotive end markets, with Korean manufacturing operations. The company is in a turnaround following display segment divestiture, repositioning as a pure-play power analog supplier.
FACTOR & THEME
Levered to the analog semiconductor inventory destock recovery and Korean tech re-rating, with secondary exposure to OLED/automotive display cycles. Peer reads from ON, MPWR, and Korean analog peers have been positive in the last 60 days as channel inventory normalizes.
NEWS FLOW
Limited specific catalysts in last 60 days - the move is driven by sector beta and improving analog channel commentary from larger peers (Industry, Medium impact). Stock has more than doubled off 2024 lows as the market sniffs out an analog cycle bottom. No imminent product or contract announcement on the tape.
INSTITUTIONAL
Tiny float (27.8M) and micro-cap status (\$210M) means institutional ownership feed unavailable but realistically thin. Zero insider buying in last 60 days - notable absence given how compressed the chart looks and how cheap the stock screens (P/B 0.9, P/S 1.2). No smart-money confirmation.
KEY RISK
Thesis invalid on a close back below the \$5.35 prior swing low or on a Q2 print showing continued gross margin compression below 16%; ongoing operating losses (-15.5% op margin) leave little fundamental cushion.

Clean VCP coil with tight 3.99 base, RS line at new high, and price 1.7% from pivot - strong structural setup riding analog cycle recovery. Held back from A by absent insider confirmation, weak vol_dryup_strict (today's volume 144% of average - not a true dry-up day), no imminent specific catalyst, and the bear case: a still-unprofitable micro-cap that needs the entire analog cycle to cooperate to work. Conviction: Medium.

CATALYST INTELLIGENCE

EARNINGS

July 27

Tight 2.6 base with vol contraction but RS line NOT at new high, RS vs SPY negative, and 4.8% from pivot in a lagging industrial/cyclical group - no alpha angle today despite acceptable structure; 18% short interest is the only interesting wrinkle. Conviction: Low.
