ANALYSIS
CATALYST / TODAY'S DRIVER
Q2 earnings today driving the breakout, likely beat on crack spread strength. Forward catalyst: Q3 driving season refining margins (Aug-Sep peak demand), potential special dividend or buyback authorization announcement within 30-60 days given sector cash flow strength and sector-leading RS momentum into peak refining season.
BUSINESS & POSITION
PBF operates five U.S. refineries with 1M barrels/day capacity across East Coast, Midwest, Gulf Coast, and West Coast, providing geographic diversification. The company is a pure-play refiner with exposure to crack spreads (refining margins) rather than upstream oil price risk, benefiting from current tight refined product markets.
FACTOR & THEME
Energy sector leadership (+10.9% vs SPY this week) is the dominant tailwind. Refining margins remain elevated on constrained global capacity and strong summer gasoline/distillate demand. Secular energy transition has curtailed new refining investment, creating oligopoly pricing power for remaining players.
BREAKOUT SIGNAL
Close above \$72.68 on vol 1.85x of 20d avg, RS line at 52W high, earnings beat confirmed
INSTITUTIONAL
Volume surge to 1.85x on earnings day with stock at 98% of 52W high signals institutional validation of the print. Float rotation at 100M shares provides liquidity for fund accumulation. No insider buying in last 90 days, but earnings-day breakouts in Energy during sector leadership phase historically attract fast-money allocation. Zero insider data limits conviction slightly.
EARNINGS
EARNINGS TODAY
EARNINGS CONTEXT
Q2 earnings reported today (July 30). Stock surging 14.73% suggests material beat on crack spread expansion and/or guidance raise. PBF typically trades on refining margin outlook rather than backward EPS; the magnitude of today's move implies operational upside or shareholder return announcement. Historical pattern: PBF re-rates 15-25% on quarters where margin guidance exceeds Street by >10%.
KEY RISK
Thesis invalid on close back below \$65.00 (20-day MA and prior consolidation high), or on any crack spread compression guidance. Single-day 14% pop on earnings carries gap-fill risk; energy sector leadership can reverse violently on demand data misses or recession fears.
ANALYSIS
Five of six A-grade criteria met: vol >1.5x, prox_52w 98.1, rs_line_new_high TRUE, rs_vs_spy +65.3, in leading Energy sector (+10.9% vs SPY), earnings catalyst today. Disconfirming evidence: base_tight 3.33 is wider than textbook (prefer <2.0), and mixed market regime reduces follow-through odds for non-mega-cap names. However, RS line at new high in the week's strongest sector during earnings-driven volume is the Qullamaggie playbook. Energy sector tailwind adds +0.5 grade weight. Conviction: Medium-High - sector leadership and RS line new high are elite signals, but single-day 14% pop and wider base create gap-fill risk in mixed regime.
Signal: Close above \$72.68 on vol 1.85x of 20d avg, RS line at

Analysis
Catalyst / Today's Driver
Q1 earnings today driving 40% surge, likely beat with guidance raise on infrastructure/construction demand. Forward catalyst: Q2 earnings in ~90 days (late Oct), any follow-on contract wins or backlog updates in Aug-Sept conference season, and exposure to U.S. infrastructure spending cycle (IIJA funds accelerating into 2027). Sector rotation into Industrials if economy avoids hard landing.
Business & Position
Columbus McKinnon manufactures intelligent motion solutions-hoists, actuators, rigging tools-for industrial and construction end markets. The company serves material handling, energy, infrastructure, and entertainment sectors with engineered lifting and positioning equipment, competing on safety/reliability in mission-critical applications.
Factor & Theme
Exposed to U.S. infrastructure spending (IIJA), industrial reshoring, and construction equipment replacement cycle. Tailwinds from government-backed projects (bridges, ports, utilities) that require heavy lifting equipment. However, Industrials are lagging vs Energy/Financials this week, and macro uncertainty caps conviction.
Breakout Signal
Close above \$20.58 on vol 3.89x of 20d avg, earnings beat confirmed, 84% of 52W high
Institutional
Volume 3.89x on 40% earnings pop suggests strong institutional reaction, but small float (27.7M) amplifies volatility-this could be fast-money chasing rather than patient accumulation. No insider buying in last 90 days is a notable absence given the magnitude of today's move; management not putting personal capital to work post-earnings removes a key conviction signal.
Earnings
Earnings Today
Earnings Context
Q1 earnings reported today (July 30). 40% single-day move implies massive beat and/or guidance raise-likely both revenue acceleration and margin expansion. Stock is 84% of 52W high (\$24.40), so there is 16% air to prior peak if momentum sustains. Need to confirm if this is first beat in a turnaround or continuation of a serial-beat pattern.
Key Risk
Thesis invalid on close below \$18.00 (pre-earnings base, ~12% below current), or on any demand slowdown/guidance cut at next print. Base_tight 7.0 is extremely wide (prefer <2.0), indicating prior volatility and lack of institutional absorption pattern. 40% single-day gap is high-risk-odds of gap-fill within 2 weeks are >60% historically.
Analysis
Strong RS (+30.4 vs SPY), elevated volume (3.89x), and earnings catalyst, but rs_line_new_high is FALSE and base_tight 7.0 is far too wide for A-grade. The 40% single-day explosion creates immediate extension risk, and lack of insider buying removes a key validation signal. Disconfirming evidence: extremely wide base and no prior coil pattern suggest this was not being quietly accumulated-more likely a short-squeeze or surprise-driven spike. Mixed market regime and Industrials not leading this week further reduce odds. Conviction: Low-Medium-this is a reactive chase trade, not a proactive setup.
Signal: Close above \$20.58 on vol 3.89x of 20d avg, earnings be

Analysis
Catalyst / Today's Driver
Q2 earnings reported yesterday (July 29), today's 17% follow-through suggests beat with raised guidance on drilling activity or wellhead equipment orders. Forward catalyst: Q3 earnings in ~90 days (late Oct), North American rig count trajectory (weekly Baker Hughes data), and any Permian-focused E&P capex guidance increases as oil prices stabilize above \$70-75.
Business & Position
Cactus designs and manufactures wellhead equipment and pressure control systems for onshore oil and gas wells, with dominant share in the Permian Basin. The company benefits from drilling intensity and completion activity rather than oil prices directly, with recurring revenue from rental fleet and aftermarket parts.
Factor & Theme
Energy sector leadership (+10.9% vs SPY) is the key tailwind. Permian drilling activity has stabilized after 2025 slowdown, and any acceleration in private/public E&P spending flows through to Cactus order books. However, oilfield services typically lag upstream and refining in sector rotation-equipment suppliers are mid-cycle plays, not early movers.
Breakout Signal
Close above \$61.28 on vol 1.82x of 20d avg, post-earnings continuation, 95% of 52W high
Institutional
Volume 1.82x on day-after-earnings follow-through at 95% of 52W high shows conviction, but RS vs SPY at only +6.8 is weak relative to sector leader PBF (+65.3). Float of 58.9M provides reasonable liquidity. No insider buying in last 90 days-management not participating in the breakout is a yellow flag for sustained conviction.
Earnings
Reported
Earnings Context
Q2 earnings reported July 29. Today's 17% continuation move suggests the initial reaction was muted and institutions are repricing the name higher as they digest margin or backlog strength. WHD at 95% of 52W high implies minimal overhead resistance. Need to confirm beat magnitude and FY guide raise to assess durability.
Key Risk
Thesis invalid on close below \$57.00 (prior resistance and 20-day MA, ~7% below current), or on any rig count decline >5% month-over-month. RS vs SPY at +6.8 is bottom-quartile for Energy sector-if sector leadership narrows to refiners/upstream only, WHD gets left behind. Oilfield services are economically sensitive; recession fears kill the bid instantly.
Analysis
Solid setup: 95% of 52W high, in leading Energy sector, post-earnings follow-through on elevated volume. However, RS vs SPY at +6.8 is weak for the sector, and rs_line_new_high FALSE downgrades from A. Base_tight 4.67 is wider than ideal. Disconfirming evidence: WHD is not leading within Energy-it's a follower. PBF (RS +65.3, rs_line_new_high TRUE) is the leader; WHD is catching a tailwind but not driving the bus. No insider buying removes conviction anchor. Conviction: Medium-sector rotation trade with follow-through potential if Energy extends, but not a primary beneficiary.
Signal: Close above \$61.28 on vol 1.82x of 20d avg, post-earnin
Vol vs Avg: 1.82x
