Stop: $100.00 (below base structure; ~8% risk from pivot)

CATALYST INTELLIGENCE

EARNINGS

November 17 - Forward P/E 17.1x vs trailing 22.5x implies Street expects earnings acceleration; PEG of 0.54 suggests undervaluation if growth materializes. Beat history not specified but 7% revenue growth and strong operating margins (23.6%) suggest execution. Catalyst: Earnings in 7 days - HIGH IMPACT.

BUSINESS & POSITION

Griffon operates through two segments: Home & Building Products (AMES brands - tools, storage, outdoor living) and Consumer & Professional Products (garage doors via Clopay). The company is a diversified industrial with exposure to both housing repair/remodel and new construction cycles.

FACTOR & THEME

Taps reshoring/infrastructure theme via construction materials demand; Consumer Discretionary sector (+7.7% 20d) is currently leading. Beta of 1.44 amplifies moves but increases drawdown risk in risk-off. Peer read-through: building products names have shown resilience as housing data stabilizes.

NEWS FLOW

No major contract wins or M&A in recent flow. RS line at new 52W high despite broader market weakness is a strong relative strength signal. Short interest moderate at 5% with 3.7 days to cover - not squeeze territory but manageable. Catalyst type: Earnings (High impact, 7 days).

INSTITUTIONAL

Volume dry-up (20.7% contraction) with RS line at new high suggests institutional accumulation into the coil despite loose base structure (4.7). Institutional ownership data unavailable from this feed. No insider activity in last 60 days - neutral signal for a mid-cap industrial.

KEY RISK

Thesis invalid on a close below $100.00 (recent base low) or on a guidance cut at the Nov 17 print; high debt/equity (1035%) creates leverage risk if housing cycle turns; loose base (4.7) increases failure probability.

RS line at new 52W high with imminent earnings catalyst (7 days) is compelling, but loose base (4.7) and risk-off regime reduce conviction; high leverage is the key bear case if housing softens. Below both MAs despite RS strength is a yellow flag. Conviction: Medium.

ENTRY TRIGGER

Close above $32.41 on volume >140% of 20-day avg (1.2M+ shares)

Target: $36.50 (52W high zone; 12% measured move)

Stop: $30.50 (below base low; ~6% risk)

CATALYST INTELLIGENCE

EARNINGS

January 21 - Street expects modest EPS growth ($2.13 fwd vs $2.02 TTM). Revenue growth strong at 25.8% with 44% earnings growth - but PEG of 2.55 suggests valuation already reflects this. No imminent catalyst for 72 days.

BUSINESS & POSITION

First Financial operates community banking across Texas with focus on commercial lending, mortgage, and wealth management. High-quality franchise with industry-leading efficiency (56.9% operating margin, 43.3% net margin) and strong ROE (15.9%) relative to regional bank peers.

FACTOR & THEME

Texas economic exposure provides secular tailwind from population/business migration. Defensive positioning via low beta (0.81) suits risk-off regime. However, Technology sector (-12.9% 20d) and Financial Services broadly underperforming SPY creates headwind for bank breakouts.

NEWS FLOW

INSIDER CLUSTER DETECTED: 4 open-market buys by 3 distinct insiders totaling $149K in last 60 days. While no senior executives (C-suite) among buyers, cluster of director-level purchases at these levels suggests confidence in franchise value. Short interest elevated at 8.6% with 9.8 days to cover. Catalyst type: Insider accumulation (Med impact, ongoing).

INSTITUTIONAL

Strong vol dry-up (36% contraction) with insider cluster (score: 6) is notable for a community bank. Pattern suggests informed accumulation ahead of potential catalyst not yet in consensus view. Institutional ownership data unavailable from this feed. Insider buying upgrades conviction despite lack of C-suite participation.

KEY RISK

Thesis invalid on close below $30.50 (10-week base low) or on NIM compression guidance at Jan 21 print; RS line NOT at new high is concerning - relative underperformance must reverse for breakout to work.

Insider cluster of $149K across 3 insiders is a conviction upgrade signal (cluster score 6 applies +1 tier adjustment from C to B); strong franchise metrics and Texas exposure are positives. However, RS line not at new high, no imminent catalyst (72 days), and risk-off regime are headwinds - the insider activity is the sole differentiator here. Bear case: multiple compression if NIM pressures emerge. Conviction: Medium.

Target Pr.	**$66.29**

ENTRY TRIGGER

Close above $53.55 on volume >150% of 20-day avg (1.1M+ shares)

Target: $66.00 (analyst consensus $66.29; ~23% upside from pivot)

Stop: $49.00 (below recent consolidation; ~8% risk)

CATALYST INTELLIGENCE

EARNINGS

January 13 - Forward P/E 9.9x vs trailing 14.1x implies meaningful earnings acceleration expected ($5.15 fwd vs $3.59 TTM). Revenue growth moderate at 5.2% but margin expansion driving 18% earnings growth. Catalyst 64 days out is distant.

BUSINESS & POSITION

H.B. Fuller is a global leader in adhesives, sealants, and specialty chemicals serving packaging, hygiene, construction, and electronics end markets. Core competitive advantage is formulation IP and application engineering that creates switching costs with industrial customers.

FACTOR & THEME

Reshoring/manufacturing capex theme exposure via construction and electronics adhesives. Basic Materials sector not among leaders or laggards currently - neutral positioning. EV/EBITDA of 7.9x is attractive for specialty chemicals with 18% earnings growth; beta of 0.97 is market-neutral.

NEWS FLOW

SIGNIFICANT INSIDER CLUSTER: 8 open-market buys by 7 distinct insiders totaling $946K in last 60 days - this is a HIGH-CONVICTION insider accumulation signal. Breadth (7 insiders) and size (~$1M) together constitute institutional-quality conviction from those with best visibility into operations. No senior executives flagged but director breadth is meaningful. Short interest low at 6% with only 2.3 days to cover. Catalyst type: Insider accumulation (HIGH impact, ongoing).

INSTITUTIONAL

The 7-insider, ~$1M open-market buy cluster (insider_cluster: 16) is the strongest insider signal in this candidate set. Volume dry-up (8.5% contraction, strict) with this level of informed buying suggests material upside catalyst not yet in Street consensus - potential for contract wins, margin surprise, or strategic action. Institutional ownership data unavailable from this feed.

KEY RISK

Thesis invalid on close below $46.70 (52W low) or on margin compression guidance at Jan 13 print; 100% debt/equity creates leverage sensitivity to rate environment; RS line not at new high requires relative strength to improve for breakout to sustain.

GRADE UPGRADED BA consideration warranted by insider cluster (score 16: 8 buys, 7 insiders, $946K) - however, risk-off macro regime and RS line not at new high prevent full A-grade. This is the highest-conviction insider signal in the candidate set. Bear case: leverage exposure if rates rise further or industrial demand softens. Absent senior executive participation, maintaining B but at top of range. Conviction: High.

ENTRY TRIGGER

Close above $30.23 on volume >130% of 20-day avg (2.8M+ shares)

Target: $35.00 (analyst consensus $34.64; ~16% upside)

Stop: $26.50 (below post-earnings base; ~12% risk)

CATALYST INTELLIGENCE

EARNINGS

Recently reported (Nov 2). Forward P/E 15.5x vs trailing 42.5x implies dramatic earnings inflection expected ($1.89 fwd vs $0.69 TTM). Revenue growth strong at 21.2% with 69% gross margins characteristic of software model. Post-earnings base formation in progress.

BUSINESS & POSITION

Waystar provides cloud-based revenue cycle management (RCM) software for healthcare providers, automating claims processing, payment optimization, and patient financial engagement. The company addresses a fragmented $10B+ TAM as healthcare systems digitize administrative workflows.

FACTOR & THEME

Healthcare sector is current market leader (+11.0% 20d) - favorable regime for healthcare-adjacent software. AI/automation theme applies as RCM is prime target for workflow automation. Low beta (0.11) provides defensive characteristics but limits upside participation.

NEWS FLOW

Healthcare sector leadership provides favorable backdrop. Company recently reported - base forming on post-earnings reaction. No specific contract wins or catalyst in recent flow. Short interest elevated at 9.3% with 6.9 days to cover - potential squeeze if breakout occurs with sector tailwind. Catalyst type: Sector momentum (Med impact, ongoing).

INSTITUTIONAL

Vol dry-up (20.2%) post-earnings suggests digestion rather than distribution. No insider activity in last 60 days - neutral for recent IPO/growth company. Healthcare sector leadership and RCM automation theme provide institutional interest angle. Institutional ownership data unavailable from this feed.

KEY RISK

Thesis invalid on close below $26.50 (recent base low) or loss of healthcare sector leadership; customer concentration risk typical of RCM providers creates binary exposure to large health system contract renewals.

Healthcare sector leadership (+11% 20d) provides favorable macro backdrop for this RCM automation play; post-earnings base with vol dry-up is constructive. However, RS line not at new high, no specific company catalyst, and elevated short interest create friction. Bear case: healthcare sector rotation or contract loss headline. Conviction: Medium.
