CATALYST INTELLIGENCE
EARNINGS
Aug 06 - Pre-revenue biotech; focus is cash runway and clinical milestones rather than EPS. Street watching for Phase 2 data updates on MBX 2109 and pipeline progression. Limited beat/miss history given stage; guidance will center on trial enrollment and cash position.
BUSINESS & POSITION
MBX Biosciences develops precision peptide therapies for endocrine and metabolic disorders, with lead candidate MBX 2109 targeting hypoparathyroidism-a disease with limited treatment options. The company occupies a niche disruptor position in the underserved rare endocrine space, competing against Ascendis Pharma's TransCon PTH.
FACTOR & THEME
Taps the biotech innovation cycle and orphan drug premium theme; sentiment in rare disease biotech remains constructive following recent M&A activity (e.g., larger pharma acquiring validated rare disease platforms). Peer read-through: Ascendis Pharma's SKYTROFA success validates the PTH replacement market opportunity.
NEWS FLOW
Clinical-stage focus means key catalysts are data readouts rather than quarterly financials. The Aug 6 earnings call (High Impact - Earnings) will likely provide MBX 2109 Phase 2 enrollment updates and potentially interim safety/efficacy signals. Monitor for partnership announcements or FDA guidance on registration pathway.
INSTITUTIONAL
RS line at 52-week high with volume contracting into the pivot suggests institutional accumulation during the base-classic stealth buying pattern. Small float (27M shares) amplifies any incremental institutional demand. No insider buying in last 60 days (baseline for biotech), but 17% short interest creates squeeze potential on positive data.

KEY RISK
Thesis invalid on close below \$65.00 (base low) or negative clinical commentary on Aug 6 call; binary trial risk and 17% short interest (5.5 days to cover) create volatility asymmetry-a data miss would trigger violent unwind.

Textbook VCP structure: RS line at new 52W high, price within 0.6% of pivot, volume contracting into the coil, and imminent catalyst (earnings in 2 days) with potential for clinical updates. The 132% RS vs SPY is elite sector leadership. Strongest bear case: binary clinical-stage biotech with no revenue and 17% short interest-any negative data surprise triggers sharp reversal. However, the technical quality and catalyst timing are institutional-grade. Conviction: High.

Stop: \$3.40 (base low; 12% risk)

CATALYST INTELLIGENCE
EARNINGS
Aug 05 - Street expects continued revenue recovery (+12.1% growth) with path to profitability (FY EPS \$0.27 implied). Turnaround story requires margin expansion proof. Limited recent beat history given restructuring noise; focus on EBITDA margin progression and aerospace order book commentary.
BUSINESS & POSITION
NN Inc. manufactures precision metal components and assemblies for automotive, aerospace, and industrial markets-a classic reshoring beneficiary as OEMs diversify supply chains away from Asia. The company is a niche supplier rather than category leader, with turnaround potential following operational restructuring.
FACTOR & THEME
Direct exposure to U.S. manufacturing reshoring and aerospace supply chain recovery themes. Industrials sector leading (+3.7% vs SPY) provides favorable sector tailwind. Peer read-through: precision components suppliers have seen multiple expansion on reshoring narrative (e.g., AIMC, TRS).
NEWS FLOW
Earnings tomorrow (Aug 5) is the primary catalyst (High Impact - Earnings). Management commentary on reshoring-driven order growth and margin trajectory will determine breakout sustainability. 152% debt/equity creates refinancing overhang-watch for any balance sheet updates.
INSTITUTIONAL
Strict vol dry-up confirmed with volume stair-stepping lower across three weeks suggests quiet accumulation despite micro-cap status (\$300M market cap). Low institutional coverage creates discovery potential but also liquidity risk. No insider buying in last 60 days-would be more compelling with management conviction signal.

KEY RISK
Thesis invalid on close below \$3.40 (recent base low) or guidance disappointment tomorrow; 152% debt/equity ratio is material-any balance sheet stress or covenant concerns would overwhelm the technical setup.
Strict volume dry-up and proximity to pivot (0.8%) are strong, but RS line not at new high and base_tight 3.1 indicate setup needs one more tightening week for A consideration. Earnings catalyst tomorrow provides timing but also binary risk. Strongest bear case: high leverage (152% D/E) in a rate-sensitive environment-any refinancing concerns invalidate turnaround thesis. Industrials sector leadership is supportive. Conviction: Medium.

Stop: \$7.00 (base low; 12% risk)

CATALYST INTELLIGENCE

EARNINGS

Aug 14 - Pre-revenue biotech; cash runway and clinical milestones are the focus. Street watching for SL-172154 (CD47/SIRP) and pipeline updates. No meaningful beat/miss history; quarterly calls are pipeline progress reports.

BUSINESS & POSITION

Shattuck Labs develops bi-functional fusion proteins (Agonist Redirected Checkpoint or ARC platform) for cancer immunotherapy, targeting tumor microenvironment modulation. Positioned as a fast-follower/niche disruptor in the crowded immuno-oncology space with differentiated mechanism.

FACTOR & THEME

Biotech cycle exposure with specific immuno-oncology focus; sentiment mixed as sector consolidation continues. Healthcare sector lagging (-0.1% vs SPY) provides headwind. Peer read-through: I-O names have underperformed broader biotech indices YTD pending clearer clinical differentiation.

NEWS FLOW

Notable insider activity: 1 buy totaling \$250K in last 60 days (cluster score 4) signals management confidence (Med Impact - Corporate). Earnings Aug 14 provides next clinical update catalyst. Monitor for conference presentations or partnership discussions in the immuno-oncology space.

INSTITUTIONAL

Strict volume dry-up (44% contraction) with price holding near highs indicates accumulation. The \$250K insider buy is a positive signal but single-buyer (not a cluster) limits upgrade consideration per the grading rules. 8.5% short interest (4.4 days to cover) provides modest squeeze potential on positive news.

KEY RISK

Thesis invalid on close below \$7.00 (base support) or negative clinical update at Aug 14 earnings; binary clinical risk in competitive I-O landscape where differentiation is difficult to prove-one negative trial read would reset the stock.

Tight base (2.73), strict vol dry-up, and 0.3% from pivot are technically strong. The \$250K insider buy adds conviction but cluster score of 4 (single buyer, not C-suite) doesn't meet the 5 threshold for grade upgrade. RS line not at new high and Healthcare sector lagging are headwinds. Strongest bear case: crowded I-O space with high clinical failure rates-differentiation is unproven. Catalyst timing (10 days to earnings) is appropriate. Conviction: Medium.

STTK — 90D Base Setup | Pivot: \$7.94 (gold) | SMA: 9(blue) 21(orange) 50(green) 200(red)

CATALYST INTELLIGENCE
EARNINGS
Aug 11 - Revenue model is spectrum licensing fees-high gross margin (100%) but operating losses as company invests in ecosystem development. Recent 41% revenue growth and 98% earnings growth reflect ramping customer deployments. Street watching for new utility customer wins and lease renewals.
BUSINESS & POSITION
Anterix holds the largest licensed spectrum position in the 900 MHz band, leasing to utilities and critical infrastructure operators for private LTE networks supporting grid modernization, smart meters, and SCADA systems. Category leader in a niche spectrum licensing market with long-term contracted revenue.
FACTOR & THEME
Unique exposure to utility grid modernization and energy transition infrastructure themes; not directly correlated to traditional telecom dynamics. Sentiment stable as utility capex for grid hardening remains resilient. Peer read-through: utility infrastructure spending remains strong (see PECO, DUK capex commentary).
NEWS FLOW
Earnings Aug 11 (High Impact - Earnings) will update on spectrum lease pipeline and customer deployment progress. 17% short interest (3.7 days to cover) creates squeeze setup if guidance positive. Monitor for new utility partnerships or FCC regulatory developments affecting 900 MHz band.
INSTITUTIONAL
Strict volume dry-up with tight float (13.5M shares) suggests controlled selling pressure-holders are committed. Strong RS (103.5%) indicates relative strength leadership. No insider buying in last 60 days. High short interest combined with illiquid float creates potential for sharp moves on catalyst.
KEY RISK
Thesis invalid on close below \$100.00 (psychological and technical support) or negative customer commentary at Aug 11 earnings; single-theme concentration risk-if utility grid modernization spending slows, the TAM thesis compresses.

Strong strict vol dry-up, tight float, and RS leadership (103%) are institutional-quality characteristics. However, 6.3% to pivot is at the outer edge of actionable, RS line not at new high, and no insider buying reduce urgency. Catalyst timing (7 days to earnings) is reasonable. Strongest bear case: niche single-customer-type business model creates concentration risk-utility capex cycles can turn. Base needs to tighten closer to pivot for A consideration. Conviction: Medium.

CATALYST INTELLIGENCE
EARNINGS
Aug 04 - Reports TODAY-earnings date in 0 days (High Impact - Earnings). Street expects continued WAKIX revenue growth (+16.6% recent) with forward EPS of \$6.02 implying significant profitability expansion. Serial execution on WAKIX launches should continue; watch for label expansion updates and pipeline progress.
BUSINESS & POSITION
Harmony Biosciences commercializes WAKIX (pitolisant) for narcolepsy and related sleep disorders, representing a differentiated non-scheduled treatment option. Category leader in the narcolepsy market with expanding label and pipeline optionality in CNS disorders.
FACTOR & THEME
Defensive biotech exposure-commercial-stage with proven revenue stream reduces binary risk vs clinical-stage peers. Healthcare sector lagging (-0.1%) is a headwind. Peer read-through: commercial rare disease names have held up better than development-stage biotech in recent rotations.
NEWS FLOW
Earnings TODAY (Aug 4) is the immediate catalyst. Profitable commercial biotech with 6.4x forward P/E is unusually cheap for the sector-suggests market skepticism about growth durability. 11.8% short interest (6.4 days) creates squeeze potential on beat-and-raise. Watch for narcolepsy market share data and pipeline updates.
INSTITUTIONAL
Volume dry-up into the base with price consolidating near highs suggests accumulation, but vol_w1 > vol_w2 pattern is imperfect. Commercial profitability (forward P/E 6.4x) is rare in biotech and attracts crossover fundamental investors. No insider buying in last 60 days.
KEY RISK
Thesis invalid on close below \$35.50 (base low) or revenue miss/guidance cut TODAY; single-product concentration risk (WAKIX) means any competitive or reimbursement headwind is existential.

Profitable commercial biotech at 6.4x forward P/E is compelling value, but base_tight 3.39 is loose, RS line not at new high, and vol dry-up pattern imperfect (w1/w2 not stair-stepping cleanly). Earnings TODAY creates immediate binary catalyst-setup could resolve within hours. Strongest bear case: single-product dependency and Healthcare sector underperformance create headwinds. The valuation anomaly is interesting but technical structure is B-tier. Conviction: Medium.

CATALYST INTELLIGENCE
EARNINGS
Aug 06 - 55% revenue growth reflects defense contract ramp. Currently unprofitable (TTM EPS -\$0.30) but forward EPS \$0.68 indicates path to profitability. Watch for defense contract updates and industrial laser recovery commentary. High valuation (114x forward P/E) prices in significant growth acceleration.
BUSINESS & POSITION
nLIGHT designs and manufactures high-power semiconductor lasers for defense (directed energy weapons), industrial (materials processing), and aerospace applications. Positioned as a key supplier in the emerging directed energy weapons market with exposure to DoD modernization spending.
FACTOR & THEME
Direct defense spending exposure via directed energy programs (laser weapons for missile defense, drone defeat). Theme sentiment accelerating as DoD prioritizes counter-drone and hypersonic defense capabilities. Peer read-through: defense primes reporting strong bookings in advanced weapons systems.
NEWS FLOW
Earnings Aug 6 (High Impact - Earnings) in 2 days-focus will be on defense program bookings, directed energy contract wins, and path to profitability. Recent 55% revenue growth suggests strong execution. Monitor for new defense prime partnerships or program-of-record announcements.
INSTITUTIONAL
Vol dry-up suggests accumulation but pattern imperfect (w2 < w1 but w3 elevated). Defense laser exposure is a differentiated angle not widely owned in SMID growth portfolios. No insider buying in last 60 days. 5.2% short interest is manageable with 2 days to cover.

KEY RISK
Thesis invalid on close below \$70.00 (base support) or defense bookings disappointment at Aug 6 earnings; high valuation (114x forward P/E) leaves no margin for error-any growth deceleration triggers multiple compression.

Defense directed energy theme is high-conviction secular tailwind, and 55% revenue growth validates execution. However, base_tight 3.08, RS line not at new high (+8.4% only), and imperfect vol pattern keep this at B-tier. Strongest bear case: 114x forward P/E requires flawless execution-any contract slip or margin miss will punish the stock severely. Earnings in 2 days provides catalyst timing. Conviction: Medium.

CATALYST INTELLIGENCE
EARNINGS
Aug 06 - Pre-revenue clinical biotech; focus is cash runway, pipeline advancement, and partnership potential. No beat/miss pattern applicable. Watch for clinical trial updates and potential partnership discussions given platform value.
BUSINESS & POSITION
Immunome develops novel antibody therapeutics using its proprietary discovery platform targeting oncology and infectious diseases, with lead programs in solid tumors. Positioned as a platform-driven biotech with multi-asset optionality rather than single-program dependency.
FACTOR & THEME
Biotech innovation cycle exposure; platform approach provides diversification vs single-asset biotechs. Healthcare sector lagging (-0.1%) creates headwind. Peer read-through: platform biotechs have attracted partnership interest as pharma seeks external innovation.
NEWS FLOW
Earnings Aug 6 (High Impact - Earnings) in 2 days will update on pipeline progression. 17.8% short interest (9.3 days to cover) is notably high-creates significant squeeze potential on positive data but reflects market skepticism. Monitor for conference presentations or partnership announcements.
INSTITUTIONAL
Volume dry-up suggests accumulation but RS essentially flat (+1.6%) indicates no relative leadership. Very high short interest (17.8%, 9.3 days) is the dominant positioning signal-this is a battleground stock. No insider buying in last 60 days despite stock near highs.
KEY RISK
Thesis invalid on close below \$22.00 (base support) or negative clinical commentary at Aug 6 earnings; 17.8% short interest and 9.3 days to cover means shorts are deeply entrenched-they have conviction against the stock, implying bear thesis has merit.

Base structure is reasonable (2.69 tight, 1.2% to pivot, vol dry-up confirmed), but RS essentially flat (+1.6%) shows no leadership-stock is tracking the market, not leading it. Very high short interest (17.8%) is a double-edged sword: squeeze potential but also signals credible bear thesis. Strongest bear case: shorts rarely wrong to this degree without fundamental concerns-crowded positioning suggests market doubts pipeline. Healthcare lagging adds headwind. Conviction: Low.

CATALYST INTELLIGENCE
Aug 10

Base_tight 5.63 is very loose, RS vs SPY is negative (-13.1%) indicating significant underperformance, and extremely illiquid (20K avg daily volume). Despite strict vol dry-up, the relative weakness and structural looseness disqualify this from actionable consideration. Earnings Aug 10 provides potential catalyst but setup quality insufficient. Monitor for tightening. Conviction: Low.

CATALYST INTELLIGENCE

EARNINGS

Aug 13

Base structure is decent (2.42 tight, vol dry-up confirmed), but RS line not at new high and only +6.7% relative performance shows no leadership. 12.8% short interest suggests ongoing skepticism about EM payments durability. Setup is technically acceptable but lacks the RS leadership or catalyst urgency for higher grade. Watch for earnings Aug 13 as potential upgrade trigger. Conviction: Low.

CATALYST INTELLIGENCE

EARNINGS

Aug 05

Consumer Staples sector lagging (+1.2%), RS not at new high, negative revenue growth (-19.7%), and 5.9% distance to pivot indicate setup is not ready. Vol contraction is weak (7.8%) and pattern imperfect. Earnings tomorrow creates binary event but structural quality insufficient for higher conviction. Monitor for post-earnings base development. Conviction: Low.

CATALYST INTELLIGENCE

EARNINGS

Aug 10

RS vs SPY negative (-11.3%) shows significant underperformance despite Industrials sector leadership-stock is lagging its own sector. Base_tight 3.25 is loose, 383% debt/equity ratio is severe balance sheet risk, and negative ROE (-53%) reflects fundamental challenges. Proximity to pivot (0.3%) is only positive. Not actionable given relative weakness and leverage concerns. Monitor only. Conviction: Low.
