Target: \$165.00 (measured move from 20-day base depth of ~\$12 added to pivot)

Stop: \$140.50 (base low; 3.4% risk from current)

CATALYST INTELLIGENCE

EARNINGS

October 29 - Street consensus: ~\$1.28 EPS on ~\$750M revenue. TTM EPS growth of 448.6% reflects prior-year comp effects from divestitures; normalized growth trajectory is mid-teens. Beat/miss pattern shows consistency post-portfolio restructuring. No imminent investor day scheduled; Q3 print 76 days out - too far for near-term catalyst.

BUSINESS & POSITION

Arcosa manufactures infrastructure-related products across three segments: Construction Products (aggregates, specialty materials), Engineered Structures (utility poles, wind towers, telecom structures), and Transportation Products (barges, rail components). The company has repositioned toward higher-margin infrastructure plays, benefiting from IIJA spending, grid modernization, and domestic manufacturing trends.

FACTOR & THEME

Direct exposure to U.S. infrastructure spending (IIJA tailwinds still flowing through 2027), utility grid hardening capex, and reshoring of critical materials. Sentiment in infrastructure theme remains constructive as mega-projects reach execution phase. Peer read-through: Martin Marietta (MLM) and Vulcan (VMC) aggregates strength confirms demand backdrop.

NEWS FLOW

Recent contract wins in utility structures segment supporting backlog visibility. Management has highlighted margin expansion in Construction Products from improved pricing power. No major regulatory or M&A catalysts in past 60 days. Catalyst type: Corporate (backlog execution) - Impact: Medium.

INSTITUTIONAL

Volume dry-up with price holding at 52W high zone suggests quiet institutional accumulation. No insider activity in last 60 days (baseline). Float of 48M shares with \$7B market cap places it in mid-cap sweet spot for growth fund accumulation. Russell 2000/S&P 600 constituent with ETF flow support.

KEY RISK

Thesis invalid on a close below \$140.50 (base low), or if aggregates pricing weakens materially in Q3 print. Customer concentration in utility segment and cyclical exposure to construction spending are structural concerns. Short interest modest at 2.0%.

Textbook tight base (1.49) with clean vol contraction, price 0.4% from pivot - structural quality is A-tier. However, RS line not at new high, earnings catalyst 76 days out (too distant), and no near-term corporate catalyst downgrades timing. Strongest bear case: infrastructure spending delays or margin compression from input cost inflation. Conviction: Medium.

Close above \$116.50 on volume >150% of 20-day average (1.59M shares)
Target: \$140.00 (analyst consensus zone; 21% upside from pivot)
Stop: \$108.00 (consolidation low; 6.9% risk from current)

CATALYST INTELLIGENCE
EARNINGS
Reported August 4 (10 days ago). Pre-revenue biotech; P/E inapplicable - valuation reflects pipeline optionality. Street targets average \$137.62 implying 19% upside. Cash runway and clinical timelines are the relevant metrics; most recent print showed adequate runway through 2027.
BUSINESS & POSITION
Dianthus is a clinical-stage biotech developing complement-targeted therapies for autoimmune and inflammatory diseases. Lead asset DNTH103 targets complement C2 for conditions including generalized myasthenia gravis (gMG) and cold agglutinin disease (CAD). The 485% YTD move reflects Phase 2 data readouts de-risking the pipeline.
FACTOR & THEME
Taps the biotech cycle recovery theme - XBI has outperformed in 2026 as rate cuts materialize and M&A activity accelerates. Complement inhibition is a validated mechanism (Alexion/AstraZeneca precedent). Healthcare sector +5.1% over 20 days confirms supportive backdrop. Peer read-through: Annexon (ANNX), Apellis (APLS) complement plays have seen renewed interest.
NEWS FLOW
Phase 2 data readouts in H1 2026 drove the multi-bagger move. No new catalysts in last 30 days post-earnings. Watch for potential partnering discussions or Phase 3 initiation announcements. High short interest (17.6%, 8.5 days to cover) creates squeeze potential if positive news emerges. Catalyst type: Corporate (clinical milestones) - Impact: High.
INSTITUTIONAL
RS line at new 52W high with vol dry-up into the coil - classic institutional accumulation pattern. No insider activity in last 60 days. Beta of 0.08 reflects idiosyncratic/binary nature. High short interest (17.6%) provides fuel for squeeze but also reflects skepticism on valuation after 5x move.

KEY RISK
Thesis invalid on close below \$108.00 (recent consolidation low) or any negative clinical data readout. Binary FDA/clinical risk is paramount - single trial failure could reprice stock 50%+. Valuation at 5.4x book with no revenue is aggressive; any dilutive financing would crater shares.
RS line at new high with clean vol contraction and price 0.4% from pivot - structural setup quality is strong. Base tightness (2.63) slightly loose but acceptable for biotech volatility. The strongest disconfirming argument: 17.6% short interest reflects institutional skepticism on valuation after 5x YTD run, and no identifiable near-term catalyst post-earnings. Squeeze potential is real but binary risk is elevated. Conviction: Medium.

Target: \$205.00 (measured move from base depth + analyst target zone of \$191.80)
Stop: \$170.00 (base low; 5.0% risk from current)

CATALYST INTELLIGENCE
EARNINGS
October 20 - Street consensus: ~\$3.40 EPS for Q3. Revenue growth of 86.1% reflects acquisition contributions; organic growth mid-single digits. Serial execution on M&A integration supports guidance credibility. Earnings 67 days out - not an imminent catalyst but setup could trigger on sector rotation.
BUSINESS & POSITION
Nicolet is a high-performing community bank serving Wisconsin, Michigan's Upper Peninsula, and Minnesota with \$8B+ in assets. Known for disciplined credit culture and accretive M&A execution, the bank has delivered consistent organic growth supplemented by strategic acquisitions in attractive Midwest markets.
FACTOR & THEME
Regional banks benefiting from stabilizing NIM environment as Fed rate cuts are priced in. M&A theme in community banking remains active with larger regionals seeking quality franchises. Forward P/E of 13.3x on 50% EPS growth trajectory screens attractively vs. peers. Peer read-through: FFIC, UBSI regional bank strength confirms sector rotation.
NEWS FLOW
No material news in past 60 days. Potential catalysts include M&A announcements (acquirer or target) and continued NIM expansion commentary. Russell 2000 constituent with stable ETF flows. Catalyst type: Macro (rate environment) - Impact: Medium.
INSTITUTIONAL
RS line at new 52W high with strong vol contraction (34%) - institutional accumulation signature. Low float (19.8M) amplifies moves. No insider activity in last 60 days. Short interest modest at 5.0% with 4.5 days to cover - not a squeeze candidate but clean supply/demand.
KEY RISK
Thesis invalid on close below \$170.00 (base low) or on NIM compression commentary in Q3 print. Credit quality deterioration in CRE portfolio or acquisition integration issues are primary fundamental risks. Regional bank sector remains sentiment-sensitive to any banking stress headlines.

RS line at new high with excellent vol contraction (34%) and price 0.5% from pivot - structural quality is high. Base tightness (3.12) slightly loose, and earnings catalyst 67 days out dilutes timing edge. Strongest bear case: sector-wide NIM compression or CRE credit fears could derail breakout even with strong technicals. Low float provides leverage both ways. Conviction: Medium.

Target: \$47.00 (analyst consensus target)
Stop: \$41.50 (base low; 3.2% risk from current)

CATALYST INTELLIGENCE
EARNINGS
October 22 - Street consensus: ~\$1.00 EPS for Q3. TTM earnings growth of 835% reflects acquisition math; normalized growth is 15-20%. Integration synergy realization is the key earnings driver. Earnings 69 days out - distant but setup quality could trigger on sector momentum.
BUSINESS & POSITION
Atlantic Union is Virginia's largest regional bank with \$24B+ in assets following the Sandy Spring acquisition. Strong commercial lending franchise with exposure to Washington D.C. metro and Virginia economic corridors. Management has executed well on integration, driving operating leverage.
FACTOR & THEME
Benefits from regional bank NIM normalization and Virginia/D.C. economic resilience. Recent Sandy Spring integration positions for EPS accretion through 2027. PEG of 1.08 and forward P/E of 10.6x screen as value with growth characteristics. Peer read-through: regional bank group strength confirms sector bid.
NEWS FLOW
Sandy Spring integration proceeding on schedule per management commentary. No material contract or regulatory news in past 60 days. Virginia commercial real estate exposure is a monitoring point given office sector stress. Catalyst type: Corporate (integration synergies) - Impact: Medium.
INSTITUTIONAL
Exceptional vol contraction (42%) with price holding near highs - accumulation signature. No insider activity in last 60 days. Larger float (141M) provides liquidity for institutional positioning. Short interest at 7.0% with 6.3 days to cover - elevated but not extreme.
KEY RISK
Thesis invalid on close below \$41.50 (base low) or on integration stumbles/guidance cut at Q3 print. Virginia CRE exposure and elevated short interest (7%) reflect lingering concerns about credit quality. Any banking stress headlines could trigger sector-wide selling.
Tight base (1.76) with excellent vol contraction (42%) and price 0.7% from pivot - structural quality is strong. RS line not at new high and earnings 69 days out weaken timing. Strongest bear case: elevated short interest (7%) suggests institutional skepticism on CRE credit or integration execution. Conviction: Medium.

Target: \$95.00 (measured move from base depth)
Stop: \$79.00 (base low; 6.2% risk from current)

CATALYST INTELLIGENCE
EARNINGS
September 9 - Earnings in 26 days - closest catalyst in the batch. Street consensus: ~\$1.60 EPS on ~\$740M revenue. Beat/miss pattern has been mixed; cyclical sensitivity makes estimates challenging. Guidance commentary on executive search pipeline will be key. Catalyst type: Earnings - Impact: High.
BUSINESS & POSITION
Korn Ferry is a global organizational consulting firm specializing in executive search, leadership development, and talent acquisition. The company serves Fortune 500 clients across industries with services spanning executive recruiting, assessment, and compensation consulting.
FACTOR & THEME
Exposure to corporate hiring/talent themes, which tend to be pro-cyclical. Risk-on macro regime supports executive hiring budgets. However, tech sector layoffs and efficiency drives create mixed demand backdrop. Peer read-through: HSII, MAN staffing peers showing mixed signals.
NEWS FLOW
No material news in past 60 days. Key watch: executive search demand commentary and consulting backlog trends. Restructuring advisory could provide offset if corporate M&A activity picks up. Catalyst type: Earnings - Impact: High (26 days).
INSTITUTIONAL
Vol contraction (35%) with price coiling near highs - modest accumulation signature. No insider activity in last 60 days. Short interest at 5.9% with 4.5 days to cover - neutral. Float of 50M provides adequate liquidity.
KEY RISK
Thesis invalid on close below \$79.00 (base low) or on guidance cut at September 9 print. Cyclical exposure to corporate hiring budgets is primary risk - any recessionary signals could crater demand. Analyst target of \$81 is BELOW current price, suggesting limited upside consensus.

Closest earnings catalyst in batch (26 days) provides timing edge. Vol contraction (35%) is clean and RS vs SPY (+27.7%) is solid. However, base_tight (3.53) is loose, RS line not at new high, and analyst target BELOW current price is a major concern - Street sees limited upside. Strongest bear case: cyclical demand weakness in executive search. Conviction: Low-Medium.

CATALYST INTELLIGENCE

EARNINGS

October 21

Decent vol contraction (33%) with price 0.8% from pivot, but base_tight of 3.42 is loose and RS line not at new high. Short interest at 6.9% with 6.2 days to cover suggests some institutional skepticism. One of many regional banks coiling - no differentiated alpha angle. Conviction: Low.

ENTRY TRIGGER

Close above \$43.05 on volume >150% of 20-day average (1.94M shares)

Target: \$44.50 (analyst consensus target)

Stop: \$41.00 (base low; 4.0% risk)

CATALYST INTELLIGENCE
EARNINGS

October 22

Solid vol contraction (42%) with acceptable base_tight (2.36), but RS vs SPY only +11.8% and RS line not at new high - lagging regional bank peers. PEG of 0.98 is attractive but no differentiated catalyst. Earnings 69 days out. Watch for RS improvement before promoting. Conviction: Low.

ENTRY TRIGGER

Close above \$82.75 on volume >150% of 20-day average (690K shares)

Target: \$89.00 (analyst consensus target)

Stop: \$58.00 (base low; 4.2% risk)

CATALYST INTELLIGENCE

EARNINGS

October 29

Strong vol contraction (49%) but Real Estate sector is lagging (+0.1% over 20 days) - significant macro headwind. RS line not at new high, forward P/E of -3028 reflects earnings volatility/AFFO accounting. Negative EPS forward guidance is concerning. No catalyst until October 29. Wait for sector rotation before considering. Conviction: Low.
