ANALYSIS
CATALYST / TODAY'S DRIVER
Current move driven by strong technical breakout on elevated volume with 14.9% single-day gain, suggesting institutional accumulation into a turnaround narrative. Forward catalyst: November 4 earnings print where guidance on AI workload revenue and margin expansion will determine if this exits the multi-year base durably.
BUSINESS & POSITION
Fastly operates an edge cloud platform delivering content delivery network (CDN) and serverless compute services, competing with Cloudflare and Akamai in the AI-inference and real-time data delivery space. The company has been restructuring under new management, with the market beginning to price in a return to growth as AI workloads drive edge compute demand.
FACTOR & THEME
AI infrastructure (edge inference), cloud acceleration, and digital transformation tailwinds. Theme momentum is accelerating as hyperscalers push workloads to the edge, but Fastly's competitive position remains fragile against better-capitalized rivals-success hinges on differentiation via developer tools and specialized AI inference.
BREAKOUT SIGNAL
Close above \$27.42 on vol >1.95x of 20d avg
INSTITUTIONAL
Volume 1.95x average on a nearly 15% gain suggests meaningful institutional participation, though the float exceeds the 150M threshold slightly, indicating some liquidity risk. No insider buying in the last 60 days removes a key conviction signal. The name has been under-owned and under-followed after years of underperformance, creating asymmetric upside if the turnaround story gains traction, but institutional validation remains to be proven.
EARNINGS
EARNINGS IN 44D
EARNINGS CONTEXT
November 4 print is critical. Consensus estimates and beat history not provided in dataset, but prior quarters have been characterized by revenue misses and margin pressure. The market is pricing in a reacceleration-any guidance disappointment will invalidate the setup immediately.
KEY RISK
Thesis invalid on a close back below \$24.50 (approximate 20MA support), or on any revenue/margin guidance miss at the November 4 print. Float size above 150M increases volatility and reduces follow-through reliability.
ANALYSIS
Strongest disconfirming evidence: RS line is NOT at new high (critical Qullamaggie signal absent), base is wider than ideal at 3.31 ATR, and the stock is still 21% below 52W highs-this is a recovery play, not a leadership breakout. The 14.9% pop is impressive but occurs in a vacuum without insider buying or a clear near-term catalyst until earnings in 44 days. In a Risk-On regime favoring large caps, SMID follow-through faces headwinds. However, the +58.9 RS vs SPY over 12 weeks is exceptional, and the Technology sector is leading-this earns a B grade with medium conviction as a tactical swing into earnings, not a core growth position. Conviction: Medium.
Signal: Close above \$27.42 on vol >1.95x of 20d avg
Vol vs Avg: 1.95x

HURN

Huron Consulting Group Inc.

\$159.18

+0.54%

RS vs SPY: +60.9%

B STRONG SETUP

\$2.5B Cap | 15M Float

Consulting Services | Theme: Healthcare consulting | 52W Hi: 85% | Base Tight: 2.47 | Vol: 1.78x | RS/SPY: +60.9% | Above 20MA: YES | EARNINGS IN 43D

ANALYSIS
CATALYST / TODAY'S DRIVER
Current move is a technical continuation of a multi-month base breakout, not driven by same-day news but by accumulation in a low-float name. Forward catalyst: November 3 earnings where guidance on healthcare M&A consulting demand (hospital systems, payer optimization) and Education segment stabilization will determine if the stock challenges the \$186.78 all-time high.
BUSINESS & POSITION
Huron provides management consulting services focused on healthcare (hospital operations, revenue cycle), education (enrollment strategy, research compliance), and commercial sectors. The company benefits from secular tailwinds in healthcare cost optimization and higher-ed digital transformation, with a niche leadership position in mission-critical operational consulting.
FACTOR & THEME
Healthcare cost rationalization (hospitals under margin pressure driving consulting spend), digital transformation in education, and a defensive growth profile in late-cycle environments. Theme momentum is steady but not accelerating-healthcare consulting is a grind-it-out sector with lumpy project revenue, not a high-beta thematic play.
BREAKOUT SIGNAL
Close above \$159.18 on vol >1.78x of 20d avg
INSTITUTIONAL
Volume 1.78x on a minimal +0.54% gain is unusual and suggests silent accumulation-institutions are absorbing supply without spiking price, a classic setup. The 14.6M float is exceptionally tight, creating explosive potential on any positive surprise. No insider buying in the last 60 days is a notable absence given proximity to all-time highs. The low float + above-average volume in a non-volatile move implies sophisticated buyers are positioning ahead of the November 3 print.
EARNINGS
EARNINGS IN 43D
EARNINGS CONTEXT
November 3 print is 43 days out. Consensus and beat history not provided, but Huron has historically been a steady but unexciting grower-any revenue or margin beat with raised FY guidance could trigger a squeeze given the tight float. The stock is 85.2% of the way to 52W highs, suggesting the market is pricing in a strong quarter.
KEY RISK
Thesis invalid on a close below \$152 (approximate pivot and 20MA support), or on any earnings miss/guidance cut at the November 3 report. Low float cuts both ways: a miss will see violent downside. Single-sector concentration (healthcare consulting lumpy project revenue) is a structural risk.
ANALYSIS
Strongest disconfirming evidence: The RS line is NOT at a new high, which removes the #1 Qullamaggie early-leadership signal. The 0.54% gain is barely green-this is not a breakout day, it's a coiling/accumulation day. The base_tight of 2.47 is above the 2.0 textbook threshold, and the stock is still 15% below all-time highs, meaning it's in breakout zone but not confirmed. However, the +60.9 RS vs SPY, 85.2 prox_52w, and exceptionally tight 14.6M float create asymmetric upside into the November 3 print. The silent volume accumulation pattern (vol elevated with minimal price change) is textbook institutional positioning. In a Risk-On regime, this would be a strong A; the lack of RS line new high and minimal same-day momentum keep it at B. Conviction: Medium.
Signal: Close above \$159.18 on vol >1.78x of 20d avg
Vol vs Avg: 1.78x
