ANALYSIS

CATALYST / TODAY'S DRIVER

Yesterday's Q3 earnings report drove the breakout; forward catalyst is Q4 earnings late January (historically strong winter rates for product tankers) + potential special dividend announcements given strong cash generation in this rate environment.

BUSINESS & POSITION

Scorpio Tankers operates a modern fleet of product tankers (refined petroleum transport). The company is a leading independent owner/operator with ~130 eco-efficient vessels, benefiting from tight tanker capacity and geopolitical supply-chain reconfigurations driving elevated day rates.

FACTOR & THEME

Energy sector leadership (+9.4% vs SPY this week) and crude/product supply-chain volatility favoring tanker economics. Theme momentum is accelerating with Middle East tensions and refinery utilization increasing into winter demand season.

BREAKOUT SIGNAL

Close above $95.07 on vol >1.8x of 20d avg

INSTITUTIONAL

Volume 1.76x on a +7% day suggests institutional participation post-earnings. Float is modest at 38M shares; no insider buying in last 90 days. The lack of RS line new high despite being 99.8% to 52W high is a yellow flag - suggests prior resistance overhead.

EARNINGS

REPORTED

EARNINGS CONTEXT

Reported yesterday (Oct 28). No consensus data provided, but the +7% reaction implies a beat or strong guidance. Historical tanker operators are volatile on quarterly TCE rates; need to confirm beat magnitude and Q4 outlook.

KEY RISK

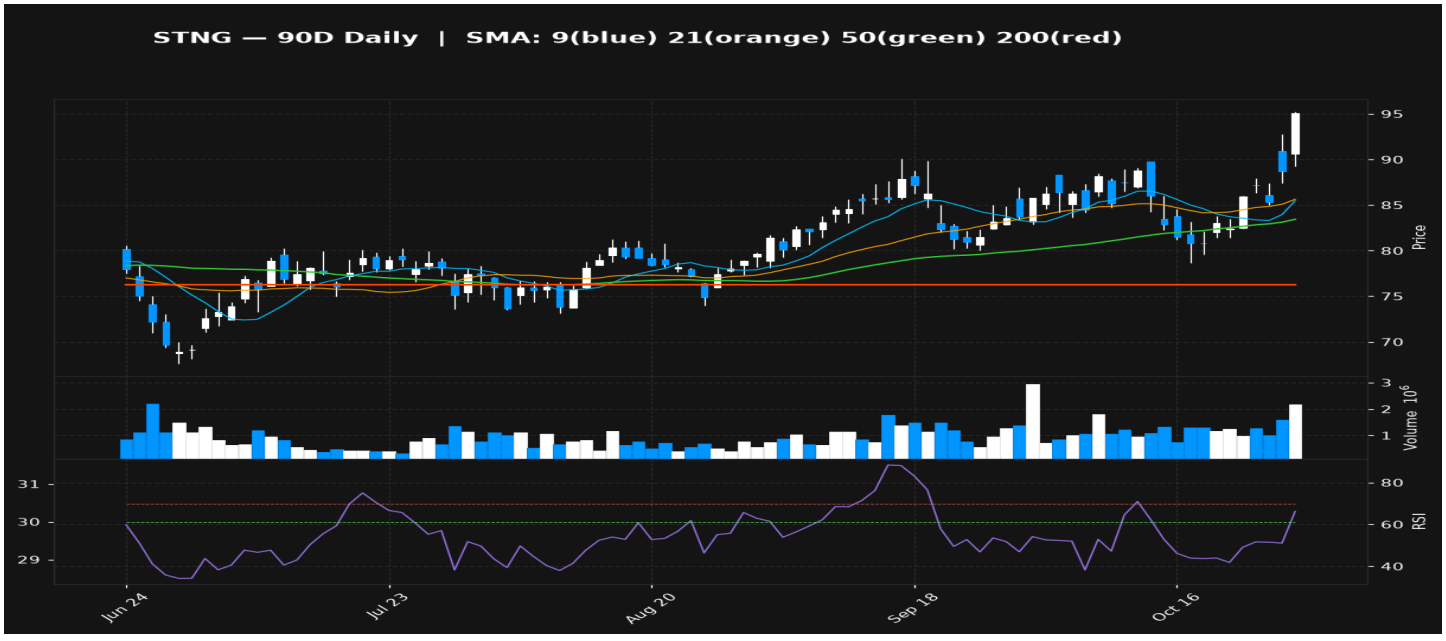

Thesis invalid on a close back below $88.50 (approximate pre-earnings base), or on any guidance indicating weakening Q4 day rates or fleet utilization below expectations.

ANALYSIS

Strongest disconfirming evidence: RS line NOT at new high despite being within 0.2% of 52W high, and base_tight 4.31 is loose (well above the 2.0 threshold for institutional-quality). This is an earnings-reaction gap, not a coiled breakout. Energy sector tailwind (+9.4%) and strong RS (+21 vs SPY) are positives, but the wide base and lack of RS confirmation downgrade from A. In a mixed market regime, chase risk is elevated. Conviction: Medium.

Signal: Close above $95.07 on vol >1.8x of 20d avg

Vol vs Avg: 1.76x

PI

Impinj, Inc.

$182.55

+3.44%

RS vs SPY: +11.3%

ANALYSIS

CATALYST / TODAY'S DRIVER

Yesterday's Q3 earnings drove the move; forward catalyst is Q4 earnings late January and ongoing RAIN RFID adoption tailwinds across retail (inventory visibility), aviation, healthcare, and automotive sectors. CES 2027 (early January) could provide additional design-win announcements.

BUSINESS & POSITION

Impinj is the category leader in RAIN RFID (ultra-low-power connectivity for IoT endpoints), providing both chips and readers. The company has pricing power in a duopoly market (NXP is the other player) and benefits from secular retail digitization and supply-chain transparency mandates.

FACTOR & THEME

IoT infrastructure and retail technology adoption. Theme momentum is stable but not accelerating - RFID is a slow-burn secular story, not a hot AI/GLP-1 narrative. Modest exposure to semiconductor cyclicality.

BREAKOUT SIGNAL

Close above $182.55 on vol >1.9x of 20d avg

INSTITUTIONAL

Volume 1.87x on a +3.4% post-earnings move is solid but not explosive. Small float (29.6M) provides volatility; no insider buying in last 90 days. The RS line not at new high despite +11.3 RS vs SPY indicates prior leadership has not been fully reclaimed.

EARNINGS

REPORTED

EARNINGS CONTEXT

Reported yesterday (Oct 28). No consensus provided, but +3.4% suggests a modest beat or in-line with constructive guidance. PI has been a serial grower but valuation sensitivity is high given it's a high-multiple SaaS-like semi story.

KEY RISK

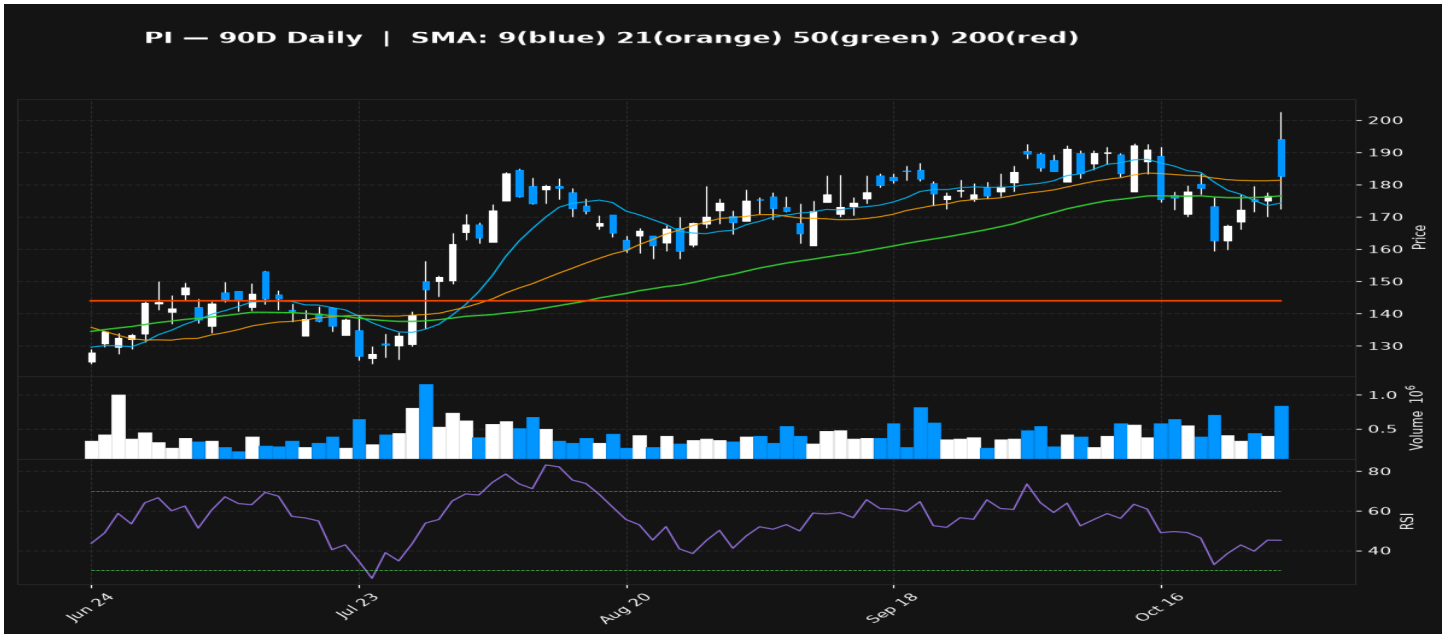

Thesis invalid on a close back below $176 (approximate pre-earnings pivot), or on any Q4 guidance miss signaling retail RFID rollout delays or inventory digestion at key customers.

ANALYSIS

Strongest disconfirming evidence: base_tight at exactly 2.0 is barely at the threshold, and the RS line is not at new high - the stock is 18% off its 52W high, suggesting it's recovering but not leading. Positive RS (+11.3) and tight base are constructive, but in a mixed regime and without the RS line confirmation, this is a follow-through candidate, not a fresh leader. Conviction: Medium.

Signal: Close above $182.55 on vol >1.9x of 20d avg

Vol vs Avg: 1.87x

WHD

Cactus, Inc.

$65.49

+1.79%

RS vs SPY: +1.0%

B STRONG SETUP

$4.6B Cap | 59M Float

Oil & Gas Equipment & Services | Theme: Energy equipment / Oilfield | 52W Hi: 88% | Base Tight: 2.28 | Vol: 2.22x | RS/SPY: +1.0% | Above 20MA: YES | REPORTED

Short %	**-**
Days to Cover	**-**
Inst. Own	**- (data lag)**

ANALYSIS

CATALYST / TODAY'S DRIVER

Yesterday's Q3 earnings (Oct 28) drove today's +1.8% follow-through. Forward catalyst is Q4 earnings late January and ongoing wellhead equipment orders tied to U.S. rig count and Permian drilling activity. Energy sector leadership (+9.4%) provides tailwind.

BUSINESS & POSITION

Cactus designs and manufactures wellhead and pressure-control equipment for oil/gas drilling and completion. The company has ~30% market share in U.S. land wellheads and benefits from Permian consolidation and longer-lateral drilling driving equipment intensity per well.

FACTOR & THEME

Energy sector leadership (+9.4% vs SPY this week). Theme is tied to U.S. oil production and rig counts, which are stable but not accelerating. Exposure to oil price volatility and completion activity cycles.

BREAKOUT SIGNAL

Close above $65.49 on vol >2.2x of 20d avg

INSTITUTIONAL

Volume 2.22x is strong, and the stock is within 12% of 52W high after earnings. No insider buying in last 90 days. RS vs SPY is barely positive (+1.0), indicating it's keeping pace with the market but not leading. Float of 59M is moderate.

EARNINGS

REPORTED

EARNINGS CONTEXT

Reported yesterday (Oct 28). No consensus provided, but +1.8% follow-through today after likely gap yesterday suggests an in-line to modest beat. Cactus historically beats but is valued for execution, not growth surprise.

KEY RISK

Thesis invalid on a close back below $63.50 (approximate pre-earnings pivot), or on any U.S. rig count decline >5% signaling reduced wellhead demand in Q4/Q1.

ANALYSIS

Strongest disconfirming evidence: RS barely positive (+1.0) and RS line not at new high - this is not a market leader despite energy sector strength. Base_tight 2.28 is just above the 2.0 ideal threshold. Energy sector tailwind (+9.4%) is the primary support, but without RS leadership and in a mixed regime, this is a sector-rotate trade, not a conviction long. Conviction: Medium.

Signal: Close above $65.49 on vol >2.2x of 20d avg

Vol vs Avg: 2.22x
