ANALYSIS
CATALYST / TODAY'S DRIVER
Major clinical data readout (likely Phase 2/3 results for batoclimab in a key autoimmune indication) reported with earnings yesterday is driving the +35% gap; forward catalyst path includes NDA/BLA submission timeline announcements, additional indication readouts, and potential partnership or licensing discussions over the next 6-12 months - the stock is not fully discounted if data opens new indications.
BUSINESS & POSITION
Immunovant develops batoclimab, a subcutaneous anti-FcRn monoclonal antibody that reduces IgG antibodies, targeting autoimmune diseases including myasthenia gravis, thyroid eye disease, and CIDP. It competes in the high-value FcRn class against argenx (ARGX) and UCB, but with a differentiated dosing profile and a broad multi-indication strategy that could support serial re-rating events.
FACTOR & THEME
FcRn inhibitors are the fastest-growing mechanism in autoimmune/rare disease - a multi-billion-dollar market with pricing power and high barriers to entry; argenx's VYVGART success has validated the class and pulled institutional capital into the space, accelerating theme momentum.
BREAKOUT SIGNAL
Close above \$35.56 on vol >800% of 20d avg; gap-and-hold above \$32.00 on any pullback confirms institutional support
INSTITUTIONAL
Volume at 13.84x average is unambiguously institutional - block desks chasing a data-driven catalyst gap of this magnitude. No insider buying in the last 60 days per Form 4 data, and no insider_12m context available; institutional ownership data is not available from this feed - recommend cross-referencing 13F filings. The RS line at a 52-week high confirms institutions were already positioned ahead of the print.
EARNINGS
REPORTED
EARNINGS CONTEXT
Earnings reported May 20; the move is a reaction to clinical/pipeline data disclosed alongside results. As a clinical-stage biotech, P/E is inapplicable - valuation reflects pipeline optionality. Beat/miss history on EPS is less relevant than data outcomes; the market's +35% response signals a materially positive data surprise.
KEY RISK
Thesis invalidated on a close back below \$28.00 (the pre-gap base top), which would signal institutional distribution of the gap-day pop; additional risk if the data readout was for a single indication and no further near-term catalysts exist, making this a fully-discounted, one-event move.
ANALYSIS
The strongest disconfirming evidence is the base_tight of 5.66 - this is a massive gap on top of a wide, loose structure, not a tight VCP coil, meaning the entry risk is high and stop placement is wide; gap-day buyers are inherently buying extended, and a 35% single-day move often exhausts near-term buyers. That said, RS line at a 52-week new high, vol at 13.84x, prox_52w at 98%, and rs_vs_spy +25.9 satisfy 4+ A-grade criteria, and the FcRn class has demonstrated multi-year re-rating potential - if forward catalysts (additional indications, partnership) materialize, this is not a one-day pop. Best practice is to wait for the first orderly pullback to a rising 20MA rather than chasing the gap. Conviction: Medium.

ANALYSIS
CATALYST / TODAY'S DRIVER
Strong earnings print (reported May 20) on robust LPG freight rates driving the +12.76% gap to a new 52-week high; forward catalyst path includes the next earnings print (August, per calendar), potential special dividend announcements given LPG's history of returning capital, and sustained Middle East/US LPG export volumes that could keep VLGC rates elevated through H2 2026.
BUSINESS & POSITION
Dorian LPG is a pure-play owner and operator of Very Large Gas Carriers (VLGCs), transporting liquefied petroleum gas (propane and butane) globally with a modern, fuel-efficient fleet. It benefits directly from US LPG export growth and the Panama Canal rate dynamics, generating high free cash flow at peak rates which it partially returns via variable dividends.
FACTOR & THEME
US LPG export boom driven by shale production, Asian petrochemical demand, and the energy transition (LPG as a bridge fuel in developing markets) creates a multi-year structural tailwind; Energy is a leading sector this week (+5.0% vs SPY), providing an additional sector-momentum tailwind.
BREAKOUT SIGNAL
Close above \$48.12 (52-week high) on vol >300% of 20d avg to confirm continuation breakout
INSTITUTIONAL
Volume at 3.63x average on a float of only 36.8M shares signals institutional accumulation - the small float amplifies price impact on institutional flows. No insider buying in the last 60 days per Form 4; institutional ownership data not available from this feed, recommend 13F cross-reference. RS line at a 52-week high confirms prior institutional positioning ahead of the catalyst.
EARNINGS
REPORTED
EARNINGS CONTEXT
Earnings reported May 20; as a shipping company, key metrics are TCE (Time Charter Equivalent) rates and EBITDA rather than consensus EPS. The +12.76% gap suggests a beat on rate realizations and/or a dividend announcement. P/E is meaningful here - shipping names with strong FCF trade at 5-8x earnings at cycle peaks. Beat history context not available from this feed.
KEY RISK
Thesis invalidated on a close back below \$42.00 (below the pre-gap base), or if VLGC spot rates roll over materially in the next 30 days as reported by Baltic Exchange data - LPG shipping is highly cyclical and mean-reverts violently when rates peak; base_tight of 6.1 confirms a wide, loose structure, making stop placement expensive.
ANALYSIS
Strongest disconfirming evidence: base_tight of 6.1 is the loosest base in this scan - far from a VCP coil - and LPG shipping earnings gaps historically mean-revert rapidly when freight rates have already peaked; buying at near the 52-week high after a +12.76% gap-day means accepting a wide stop and limited risk-adjusted upside if rates don't sustain. The bull case is powerful: RS line at new high, vol 3.63x, prox_52w 99.2%, rs_vs_spy +29.9%, energy sector tailwind, small float of 36.8M - this checks 4+ A-criteria, and the Energy sector leadership this week adds a +0.5 grade tailwind. Best approached on a constructive tight day after the gap rather than buying the wide open. Conviction: Medium.
Signal: Close above \$48.12 (52-week high) on vol >300% of 20d a

ANALYSIS
CATALYST / TODAY'S DRIVER
Technical breakout to new 52-week highs on no single large catalyst - market is pricing in a freight cycle recovery and RXO's positioning as a pure-play tech-enabled brokerage beneficiary; forward catalyst is the August 6 earnings print, which will be the first full quarterly read on whether freight volumes and yields are inflecting, plus any industry conference appearances or management guidance updates in the next 6-8 weeks.
BUSINESS & POSITION
RXO is a leading asset-light, tech-enabled truck brokerage and managed transportation platform spun off from XPO in 2022, connecting shippers and carriers via a digital marketplace. Its competitive edge lies in its proprietary technology stack, scale in the spot brokerage market, and the operating leverage inherent in a brokerage model as freight volumes recover.
FACTOR & THEME
Directly exposed to the US freight cycle recovery thesis - one of the most asymmetric industrial themes in 2026 as truckload spot rates recover from a 2023-2024 trough; reshoring and nearshoring of manufacturing adds a structural volume tailwind, and tech-enabled brokerages command premium multiples as they take share from legacy players.
BREAKOUT SIGNAL
Close above \$24.39 (52-week high) on vol >200% of 20d avg confirms full breakout continuation
INSTITUTIONAL
Volume at 2.52x on a larger float of 125.4M is a solid institutional signal - growth funds rotating into freight recovery plays. RS line at a 52-week new high with rs_vs_spy of +43.5% over 12 weeks is exceptional relative strength confirming this is not a late-cycle laggard but a genuine leader. No insider buying in the last 60 days; institutional ownership data not available from this feed - recommend 13F cross-reference given this is a spin-off that may still be under-owned by index funds.
EARNINGS
EARNINGS IN 77D
EARNINGS CONTEXT
Next earnings: August 6. As a brokerage, consensus focuses on gross margin per load and volume growth. RXO has been rebuilding revenue after the freight downcycle - the key inflection to watch is whether Q2 2026 shows gross margin expansion, which would be a re-rating catalyst. No beat/miss history detail available from this feed.
KEY RISK
Thesis invalidated on a close back below \$21.00 (the prior base top / breakout level), or if the August 6 print shows continued gross margin compression below the 15% level, confirming the freight cycle recovery is slower than priced; base_tight of 4.56 means this is not a tight coil setup - entering here requires a wider stop.
ANALYSIS
Strongest disconfirming evidence: the base_tight of 4.56 disqualifies this from VCP status - the base was wide and volatile, meaning there is less trapped supply exhaustion than ideal, and momentum alone is carrying the breakout; additionally, the Industrials sector is not a leading sector this week, creating a sector headwind relative to Technology. The bull case is compelling: RS line at new high, rs_vs_spy +43.5% (best relative strength in this scan alongside BDTX), prox_52w 97.8%, vol 2.52x, and the freight recovery is an early-cycle theme with multiple quarters of earnings upside ahead - the forward catalyst path is durable. Conviction: Medium-High - downgraded from High solely due to the wide base and sector headwind in a mega-cap-led regime. Conviction: Medium.
Signal: Close above \$24.39 (52-week high) on vol >200% of 20d a

Days to Cover	-
Inst. Own	-(data lag)

ANALYSIS
CATALYST / TODAY'S DRIVER
Post-earnings recovery move (reported May 6) - likely driven by a pipeline update or data disclosure in the aldosterone synthase inhibitor (lorundrostat) program; forward catalyst is the next major clinical data readout or NDA-enabling study results for lorundrostat in hypertension/resistant hypertension, which would be a binary re-rating event with potential 12-18 month timeline.
BUSINESS & POSITION
Mineralys Therapeutics is a clinical-stage biotech developing lorundrostat, a selective aldosterone synthase inhibitor targeting resistant hypertension and related cardiorenal conditions - a large, underserved market with no approved selective agent. The asset addresses a multi-billion-dollar opportunity in patients uncontrolled on existing antihypertensives.
FACTOR & THEME
Cardio-renal disease is a structural growth area in specialty pharma, with FDA prioritizing resistant hypertension unmet need; the GLP-1 wave is pulling institutional attention to metabolic/cardiorenal adjacencies, creating a sector halo effect for pipeline assets in this space.
BREAKOUT SIGNAL
Close above \$30.00 on vol >350% of 20d avg to signal institutional breakout through near-term resistance
INSTITUTIONAL
GRADE UPGRADE APPLIED: insider_cluster of 7 with \$8.8M in open-market buys across 2 insiders in the last 60 days is a highly material signal - \$8.8M represents ~0.37% of market cap, which is significant conviction from people with the most information. In a risk-on macro regime, this triggers the grade upgrade rule (CB). No senior officer designation noted, but dollar size is top-tier. Institutional ownership data not available from this feed - recommend 13F cross-reference.
EARNINGS
REPORTED
EARNINGS CONTEXT
Earnings reported May 6. As a pre-commercial clinical-stage company, P/E is inapplicable - valuation reflects pipeline NPV. The key metric is data readout timelines and cash runway. No revenue/EPS beat history applicable.
KEY RISK
Thesis invalidated on a close back below \$24.00 (the recent consolidation floor) or on any clinical hold, safety signal, or disappointing Phase 2b/3 data from the lorundrostat program - binary event risk remains high; the RS line is NOT at a new high and the stock is only at 59.7% of its 52-week high (\$47.65), meaning substantial overhead supply exists.
ANALYSIS
Strongest disconfirming evidence: rs_vs_spy of -5.8% is negative - this stock has underperformed the market over the last 12 weeks, is only at 59.7% of its 52-week high with heavy overhead supply from buyers above \$30, and the RS line is not at a new high, all of which argue against a clean breakout thesis. The insider buying cluster (\$8.8M, insider_cluster 7) is the single most compelling piece of evidence in favor - insiders buying at these prices with that dollar commitment in the last 60 days is a hard-to-ignore signal that the pipeline has undisclosed positive developments. Grade upgraded from C to B per insider cluster rule in a risk-on regime. This is a speculative position sizing candidate, not a full-weight breakout. Conviction: Medium.
Signal: Close above \$30.00 on vol >350% of 20d avg to signal in Vol vs Avg: 4.39x

Days to Cover	-
Inst. Own	- (data lag)

ANALYSIS
CATALYST / TODAY'S DRIVER
Likely clinical data update or conference presentation (ASCO May 2026 cycle) driving +15.4% move on 4.33x volume - Kura's tipifarnib and ziftomenib programs in AML/HRAS-mutant cancers are data-rich in 2026; forward catalyst is the August 6 earnings print plus any additional ASCO abstracts or FDA interaction data on ziftomenib's NDA pathway over the next 90 days.
BUSINESS & POSITION
Kura Oncology develops farnesyl transferase inhibitors and menin inhibitors for hematologic cancers, with ziftomenib targeting NPM1-mutant AML - a validated mechanism with partnership interest from major oncology players. Its competitive position is strengthened by being one of few companies with clinical-stage menin inhibitors and a potential first-mover in the NPM1-mutant subtype.
FACTOR & THEME
Oncology precision medicine is a high-conviction secular theme with durable institutional sponsorship; menin inhibition is one of the hottest mechanisms in hematology, attracting M&A attention from large pharma seeking to bolster their AML portfolios - acquisition optionality adds a non-linear upside scenario.
BREAKOUT SIGNAL
Close above \$11.00 on vol >350% of 20d avg would clear near-term resistance and confirm follow-through
INSTITUTIONAL
Volume at 4.33x on a 70.4M share float indicates genuine institutional interest, likely biotech specialists rotating into the ASCO catalyst window. No insider buying in the last 60 days; institutional ownership data not available from this feed. RS line not at a new high limits the A-grade conviction signal, but the rs_vs_spy of +14.4% shows meaningful outperformance.
EARNINGS
EARNINGS IN 77D
EARNINGS CONTEXT
Next earnings: August 6. As a clinical-stage oncology company, P/E is inapplicable - valuation is pipeline-driven. Key near-term metric is ziftomenib response rates in NPM1-mutant AML and any FDA feedback on BLA/NDA pathway. No commercial revenue; cash runway is the primary financial risk metric.
KEY RISK
Thesis invalidated on a close back below \$9.00 (the pre-move consolidation zone), or on any clinical setback - particularly a safety signal or insufficient response rate in the pivotal ziftomenib cohort at ASCO or in subsequent FDA meetings; with prox_52w at 82.8% and RS line not at a new high, there is meaningful overhead supply near \$12.
ANALYSIS
Strongest disconfirming evidence: base_tight of 2.93 is wide, the RS line is not at a new high (the most important Qullamaggie signal for early leaders), and prox_52w of 82.8% means the stock is not in the clean breakout zone - it has ground to make up before reclaiming all-time/52-week highs, and single-day data-driven pops in small oncology biotechs frequently fade without a clear NDA filing or partnership to anchor the move. The bull case rests on ASCO being a multi-week catalyst window with follow-on data that can sustain momentum. Conviction: Medium.
Signal: Close above \$11.00 on vol >350% of 20d avg would clear
Vol vs Avg: 4.33x

RS Line Hi	no
Above 50MA	-
Fwd P/E	-
Short %	-
Days to Cover	-
Inst. Own	- (data lag)

ANALYSIS
CATALYST / TODAY'S DRIVER
Sector momentum in energy/shipping - LPG peer LPG gapping to 52-week highs today is lifting the tanker/shipping complex; Teekay's tight base (2.05) near 52-week highs suggests prior quiet accumulation before this move; forward catalyst is the August 5 earnings print and any announced special dividends or fleet utilization updates in the interim.
BUSINESS & POSITION
Teekay Corporation is a holding company with stakes in Teekay LNG (now Seapeak) and Teekay Tankers, providing marine transportation of LNG and crude oil globally. Its value is driven by long-term charter income from its LNG fleet and spot-rate exposure in tankers, with a history of capital returns via dividends.
FACTOR & THEME
Energy shipping sits at the intersection of the energy transition (LNG as bridge fuel), geopolitical trade route disruption (Red Sea, sanctions), and US energy export growth - all structural tailwinds; the energy sector is a leading sector this week (+5.0% vs SPY), providing a direct sector tailwind.
BREAKOUT SIGNAL
Close above \$14.38 (52-week high) on vol >250% of 20d avg confirms clean continuation breakout
INSTITUTIONAL
Volume at 3.28x on a 54.6M float with a base_tight of 2.05 is a solid institutional accumulation signal - the tightness of the base before this move is consistent with quiet institutional buying without spiking price. No insider buying in the last 60 days; institutional ownership data not available from this feed. RS line is not at a new high, which is the primary limitation vs. an A-grade setup.
EARNINGS
EARNINGS IN 76D
EARNINGS CONTEXT
Next earnings: August 5. Teekay's key metrics are TCE rates across its LNG and tanker segments, distribution coverage ratio, and net debt. P/E meaningful for the holding company given charter income visibility. No beat/miss history detail available from this feed.
KEY RISK
Thesis invalidated on a close back below \$13.00 (the base support level), or if LNG spot rates and VLGC freight rates roll over sharply before the August print - Teekay's holding company structure introduces a valuation discount vs. pure-play operators, and if sector energy enthusiasm fades post today's LPG-driven move, TK could retrace the full breakout.
ANALYSIS
Strongest disconfirming evidence: RS line is not at a new high, and this looks like a sympathy move with LPG rather than a standalone catalyst - sympathy breakouts in small shipping names often fade within 1-3 sessions when the primary catalyst stock consolidates; rs_vs_spy of +9.9% is positive but not exceptional. The bull case: base_tight of 2.05 is the tightest base in this scan outside of RH, prox_52w of 98.4% puts it right at the edge of new highs, vol 3.28x is institutional, and energy sector leadership provides a tailwind. This is a solid B - not an A because the RS line fails the key Qullamaggie test. Conviction: Medium.
Signal: Close above \$14.38 (52-week high) on vol >250% of 20d a
Vol vs Avg: 3.28x
