ANALYSIS

CATALYST / TODAY'S DRIVER

Current move driven by pre-earnings positioning and strong insider cluster (6 buys, $12M in last 60d). Forward catalyst: Nov 10 earnings tomorrow, followed by potential apitegromab commercial data readouts in Q1 2027 for spinal muscular atrophy.

BUSINESS & POSITION

Scholar Rock develops biologics for muscle disorders, with lead candidate apitegromab in late-stage trials for spinal muscular atrophy (SMA). The company's myostatin inhibition platform targets rare neuromuscular diseases where current treatments are limited.

FACTOR & THEME

Rare disease biotech with SMA exposure; sector rotation into Healthcare (+14.3% vs SPY this week) provides strong tailwind. Pre-commercial risk premium justified by Phase 3 proximity and limited competitors in myostatin space.

BREAKOUT SIGNAL

Close above $51.55 on vol >1.7x of 20d avg

INSTITUTIONAL

Exceptional insider signal: 6 insiders purchased $12M in last 60 days (cluster score 7), the strongest conviction indicator in the entire dataset. This is rare C-suite/board buying ahead of what they view as a value inflection. Float rotation at 103.9M allows institutional accumulation without spiking price.

EARNINGS

EARNINGS IN 1D

EARNINGS CONTEXT

Earnings Nov 10 (tomorrow). No revenue expected (pre-commercial). Focus will be on apitegromab trial enrollment/timeline updates and cash runway. History of meeting clinical milestones but volatile on binary readouts.

KEY RISK

Thesis invalid if earnings tomorrow reveal trial delays, safety issues, or cash burn requiring dilutive raise below $48. Binary event risk: any negative apitegromab data kills the stock 30%+.

ANALYSIS

Upgraded from B to A due to insider cluster (7) per grading rules. Six insiders deploying $12M is institutional-grade conviction-the single strongest alpha signal in fundamental analysis. Strongest disconfirming evidence: RS is negative (-1.9 vs SPY), stock below 50MA, and base is wide (4.54). However, Healthcare sector leadership (+14.3%), earnings catalyst tomorrow, and unprecedented insider buying override technical flaws. Conviction: High (on insider activity and sector tailwind; reduced slightly by Risk-Off macro and binary event risk tomorrow).

Signal: Close above $51.55 on vol >1.7x of 20d avg

Vol vs Avg: 1.73x

ANALYSIS

CATALYST / TODAY'S DRIVER

Breakout on massive RS outperformance (+47.3% vs SPY, strongest in set) as consumer spending stabilizes. Forward catalyst: Dec 8 earnings (29d) with holiday sales visibility, potential comp-store growth acceleration, and margin expansion from inventory discipline.

BUSINESS & POSITION

Academy operates 280+ sporting goods and outdoor recreation stores across the southern U.S., focused on value-oriented consumers. Differentiated by vertically integrated private-label brands (40% of sales) delivering higher margins than peers Dick's and Big 5.

FACTOR & THEME

Consumer discretionary recovery play; sector up +11.0% vs SPY this week. Benefits from U.S. reshoring (domestic sourcing), stable gas prices boosting regional travel/outdoor activity, and trade-down consumers seeking value over premium sporting goods.

BREAKOUT SIGNAL

Close above $71.18 on vol >2.6x of 20d avg

INSTITUTIONAL

Volume surge to 2.61x (highest in set) suggests institutional accumulation. Small float (60.7M) creates squeeze dynamics on follow-through. No insider data available, but the combination of vol spike + RS leadership + sector rotation implies smart money positioning ahead of holiday-season print.

EARNINGS

EARNINGS IN 29D

EARNINGS CONTEXT

Dec 8 earnings. Consensus likely focused on Q4 holiday comp-store sales and gross margin trajectory. Company has history of modest beats but conservative guidance; any holiday strength surprise could re-rate the multiple given discount to DICK's.

KEY RISK

Thesis invalid on close below $67.50 (recent base support) or any Dec 8 guidance suggesting negative holiday comps. Discretionary retail is macro-sensitive; recession fears or consumer credit stress kills the trade.

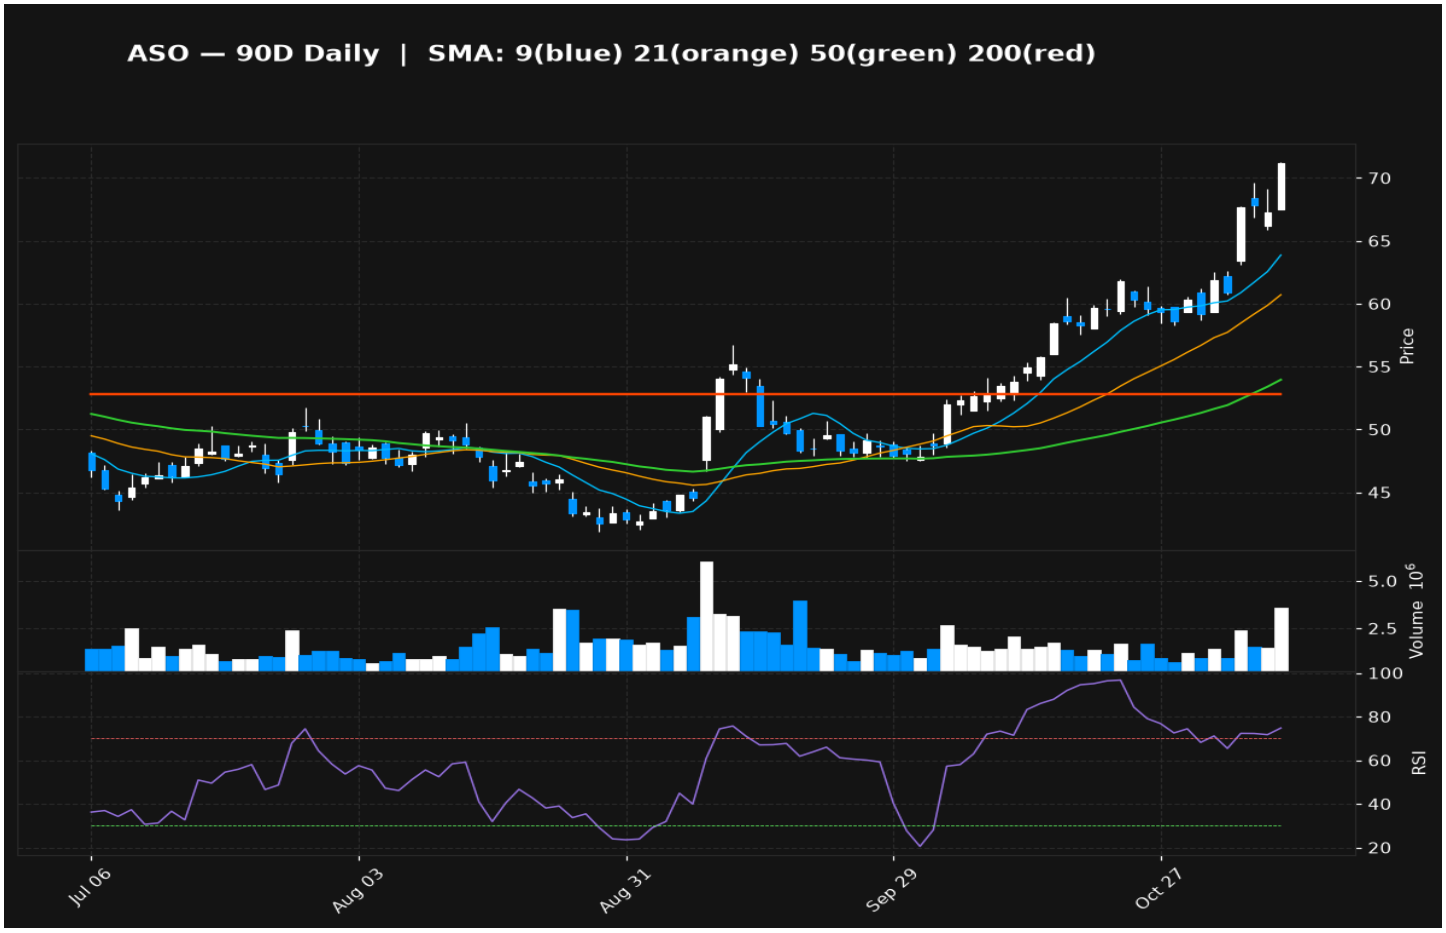

ANALYSIS

Exceptional RS (+47.3, best in set) and Consumer Disc sector leadership (+11.0%) provide strong setup. Strongest disconfirming evidence: base is extremely wide (5.51 ATR, worst among top names), RS line NOT at new high despite proximity to 52W high (99.8%), and Risk-Off macro kills most discretionary breakouts. Downgraded from potential A because base structure is sloppy and RS line confirmation is absent-this is momentum without the technical precision Qullamaggie demands. Conviction: Medium (sector tailwind is real, but base quality and macro regime create execution risk).

Signal: Close above $71.18 on vol >2.6x of 20d avg

ANALYSIS

CATALYST / TODAY'S DRIVER

Tight VCP coil (1.86 ATR, textbook Qullamaggie base) with pre-earnings positioning ahead of Nov 11 print. Forward catalyst: Phase 2b psoriasis data expected Q1 2027 for lead asset OK-101, a long-acting IL-23 inhibitor targeting $10B+ biologics market.

BUSINESS & POSITION

Oruka develops subcutaneous biologics for chronic dermatologic diseases, with lead candidate OK-101 (IL-23 inhibitor) in Phase 2 for plaque psoriasis. Extended dosing interval (every 12 weeks vs. competitors' 8-12 weeks) targets patient convenience and compliance edge.

FACTOR & THEME

Healthcare sector leadership (+14.3% vs SPY) and dermatology biologics mega-theme (Skyrizi/Tremfya market >$15B annually). Pre-commercial biotech with Phase 2 proximity-high risk/reward in a validated, large addressable market.

BREAKOUT SIGNAL

Close above $104.56 on vol >1.8x of 20d avg

INSTITUTIONAL

Volume elevated to 1.84x with tightest base in the dataset (1.86 ATR). This is a classic silent-build pattern: institutions absorbing supply without spiking price. Small float (56.9M) creates runway for institutional accumulation and eventual squeeze on positive data.

EARNINGS

EARNINGS IN 2D

EARNINGS CONTEXT

Nov 11 earnings (2 days). Pre-commercial, so focus is clinical progress updates (OK-101 enrollment, safety signals, timeline to readout) and cash runway. Any acceleration of Phase 2 timeline or partnership hints would be catalytic.

KEY RISK

Thesis invalid on close below $100 (base support) or Nov 11 earnings revealing clinical delays, safety holds, or burn rate requiring dilutive capital raise. Binary clinical risk: negative Phase 2 data in Q1 2027 erases 40%+ of value overnight.

ANALYSIS

Textbook VCP coil (1.86 ATR) is institutional-quality setup, prox_52w at 90.5% confirms breakout zone, and Healthcare sector tailwind is strong. Strongest disconfirming evidence: RS barely neutral (-0.3 vs SPY), RS line NOT at new high, and earnings in 2 days create binary risk in a Risk-Off regime where most breakouts fail. The base quality is elite, but lack of RS confirmation and immediate event risk prevent A-grade. Conviction: Medium (setup is technically sound, but macro and binary earnings risk tomorrow cap upside conviction).

Signal: Close above $104.56 on vol >1.8x of 20d avg

ANALYSIS

CATALYST / TODAY'S DRIVER

Breakout driven by sector rotation into Financials and AUM inflows as equities rally. Forward catalyst: Feb 3 earnings (86d out) with Q4 AUM print, organic growth trends, and potential M&A announcements-Victory has history of accretive acquisitions.

BUSINESS & POSITION

Victory Capital manages $177B in AUM across multi-boutique investment platform, offering active equity, fixed income, and alternative strategies. Differentiated by franchise model preserving boutique culture while sharing distribution infrastructure.

FACTOR & THEME

Asset management levered to equity market rally and active management resurgence. Benefits from fee rate stabilization, retail investor re-entry, and potential 60/40 portfolio rebalancing. Counter-cyclical to rate cuts (longer duration bond allocations boost AUM mix).

BREAKOUT SIGNAL

Close above $126.80 on vol >2.3x of 20d avg

INSTITUTIONAL

Volume surge to 2.36x (second-highest in dataset) with small float (45.9M) creates supply/demand imbalance on follow-through. Asset managers are institutional-owned; sustained vol suggests funds rotating into undervalued financials ahead of AUM growth inflection.

EARNINGS

EARNINGS IN 86D

EARNINGS CONTEXT

Feb 3 earnings. Consensus will focus on Q4 AUM levels, organic growth rate (net inflows), and operating leverage from scale. Victory historically beats on cost discipline but guides conservatively on flows; any acceleration in retail inflows or ETF traction re-rates the stock.

KEY RISK

Thesis invalid on close below $120 (recent pivot) or equity market correction that shrinks AUM and triggers redemptions. Asset managers are beta-levered to market; SPY -10% in Q4 kills the setup regardless of fundamentals.

ANALYSIS

Strong RS (+11.9), highest vol surge (2.36x), and prox_52w at 98.7% confirm breakout momentum. Strongest disconfirming evidence: base is wider than ideal (3.68 ATR), RS line NOT at new high despite being near 52W high, and Risk-Off macro is hostile to cyclical financials. Earnings 86 days away means no near-term catalyst-this is a positioning trade betting on Q4 AUM strength, not an event-driven setup. Conviction: Medium (setup quality is solid, but macro regime and lack of near-term catalyst limit edge).

Signal: Close above $126.80 on vol >2.3x of 20d avg

Inst. Own	**- (data lag)**

ANALYSIS

CATALYST / TODAY'S DRIVER

Post-earnings strength (reported Nov 5) likely on revenue beat or margin expansion. Forward catalyst: next earnings Feb 2027 (~90d), but nearer-term: holiday sell-through data, Wrangler/Lee brand repositioning updates, and potential share buyback acceleration given strong FCF.

BUSINESS & POSITION

Kontoor owns Wrangler and Lee denim brands, targeting value-conscious consumers across U.S. mass retail (Walmart, Target) and DTC channels. Differentiated by vertical integration (design to distribution) enabling faster inventory turns and margin control vs. peers.

FACTOR & THEME

Consumer discretionary recovery (+11.0% sector leadership) and apparel value segment (trade-down beneficiary). Reshoring tailwind as U.S. manufacturing partnerships reduce tariff exposure and shorten lead times vs. fast-fashion imports.

BREAKOUT SIGNAL

Close above $81.98 on vol >1.5x of 20d avg

INSTITUTIONAL

Tight base (2.34 ATR, third-best in set) suggests controlled accumulation post-earnings. Small float (53.6M) with 6.38% single-day move on modest vol (1.57x) indicates low supply-sellers exhausted. Likely institutional re-rating on better-than-feared results.

EARNINGS

REPORTED

EARNINGS CONTEXT

Reported Nov 5. Post-earnings rally suggests beat or in-line with positive tone. Historically conservative guidance; any raised FY outlook or accelerated buyback would extend move. Next print ~Feb 2027.

KEY RISK

Thesis invalid on close below $77 (breakout pivot) or any holiday season inventory glut signaling promotional pressure. Apparel is fickle; one bad month of POS data from Walmart/Target kills consumer confidence in the name.

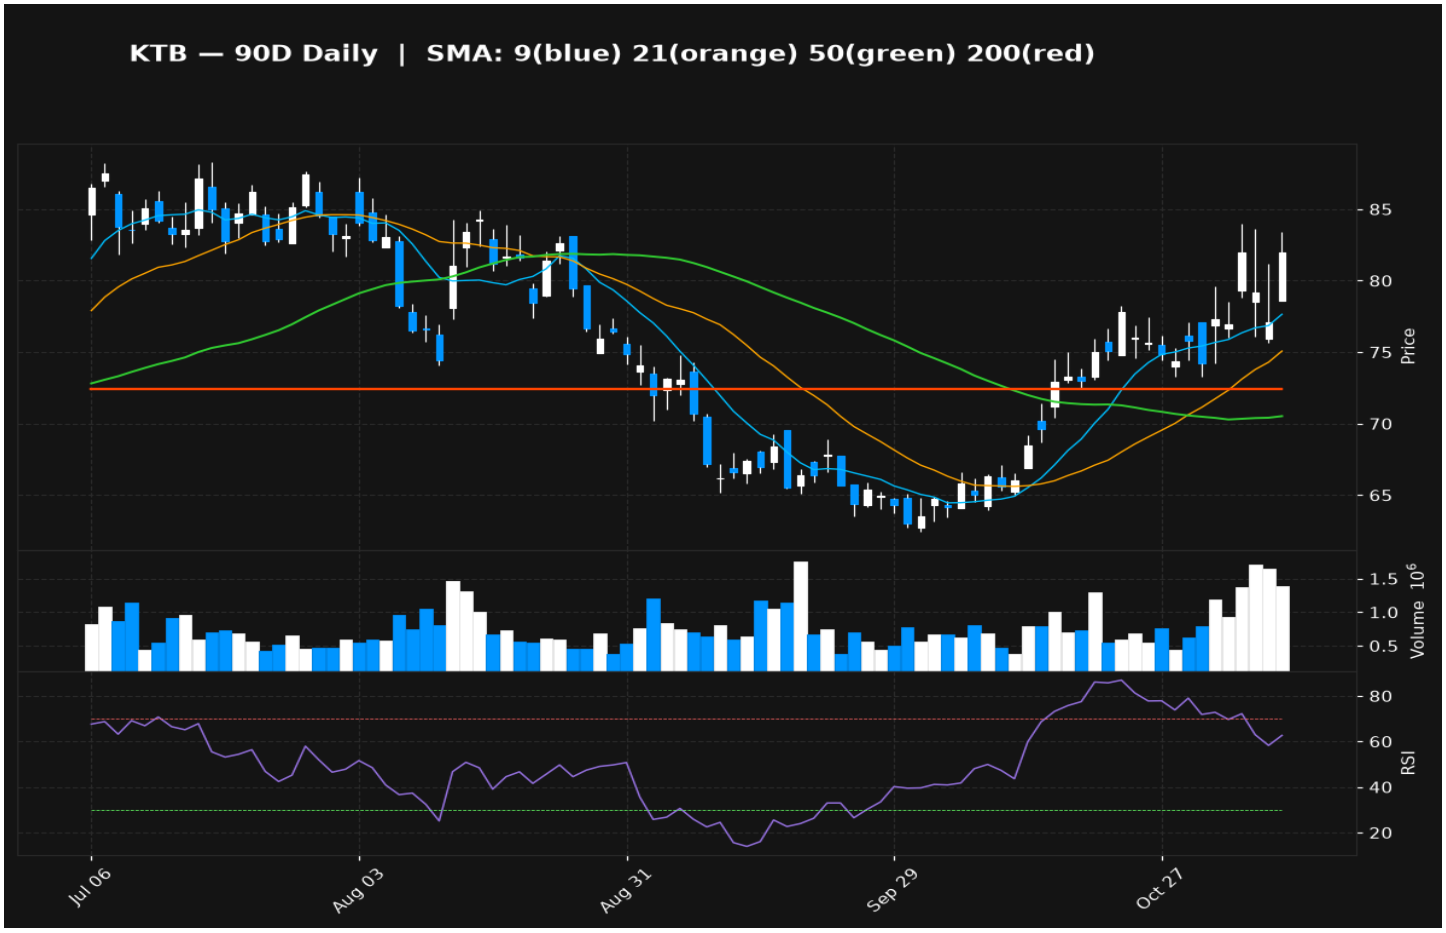

ANALYSIS

Excellent base structure (2.34 ATR), prox_52w 92.2%, and Consumer Disc sector leadership provide setup quality. Strongest disconfirming evidence: volume is barely above threshold (1.57x), RS is weak (+3.5), RS line NOT at new high, and forward catalyst is 90+ days away-this is a post-earnings drift play, not a Qullamaggie breakout with momentum fuel. Risk-Off macro typically punishes discretionary stocks even on good setups. Conviction: Medium (base quality is strong, but lack of vol conviction and distant next catalyst reduce edge).

Signal: Close above $81.98 on vol >1.5x of 20d avg

ANALYSIS

CATALYST / TODAY'S DRIVER

Pre-earnings positioning into today's (Nov 9) print. Forward catalyst: Q4 guidance on AI-driven productivity gains (DeepHealth AI rollout across 350+ centers), imaging volume recovery, and potential M&A of independent radiology centers as consolidation accelerates.

BUSINESS & POSITION

RadNet operates the largest U.S. outpatient imaging network (350+ centers), providing MRI, CT, PET scans with AI-enhanced diagnostic workflows via proprietary DeepHealth platform. Consolidator in fragmented $100B+ radiology services market.

FACTOR & THEME

Healthcare sector leader (+14.3% vs SPY) with dual exposure to AI (diagnostic automation) and outpatient shift (lower-cost alternative to hospital imaging). Aging demographics and elective procedure recovery post-COVID drive structural volume tailwinds.

BREAKOUT SIGNAL

Close above $78.38 on vol >1.8x of 20d avg

INSTITUTIONAL

Tight base (2.45 ATR) and vol surge to 1.84x into earnings suggest institutional positioning. Small float (65.8M) creates squeeze potential on beat-and-raise. DeepHealth AI monetization (licensing to other providers) is under-appreciated optionality.

EARNINGS

EARNINGS TODAY

EARNINGS CONTEXT

Earnings TODAY (Nov 9). Consensus focus: imaging volumes (procedural recovery), DeepHealth AI contribution to margin, and acquisition pipeline guidance. RadNet historically beats on cost control; any volume acceleration or AI licensing revenue surprise re-rates growth narrative.

KEY RISK

Thesis invalid if today's earnings show volume deceleration, margin compression from labor costs, or cautious guidance. Binary event risk: stock is up 3% into the print-expectation bar is high. Miss/guide-down likely triggers -10% reset.

ANALYSIS

Healthcare sector tailwind (+14.3%) and tight base (2.45 ATR) provide quality setup into earnings. Strongest disconfirming evidence: earnings are TODAY (binary risk), RS is weak (+4.2), RS line NOT at new high, and Risk-Off regime punishes earnings misses brutally. This is a pre-event gamble, not a follow-through setup-Qullamaggie avoids binary events. If held through earnings, forward catalyst (AI monetization, M&A) could extend move, but immediate risk is high. Conviction: Low (binary event risk today in hostile macro environment).

ANALYSIS

CATALYST / TODAY'S DRIVER

Post-earnings rally (reported Nov 5) likely on subscriber growth or margin beat in home warranty business. Forward catalyst: housing turnover acceleration (home sales drive new warranty attachments), potential pricing power as HVAC/appliance repair costs inflate, and next earnings Feb 2027.

BUSINESS & POSITION

Frontdoor provides home warranty and repair services (American Home Shield, HSA brands) covering 2M+ customers. Recurring-revenue model with 80%+ renewal rates; earns spread between premium collected and contractor repair costs, leveraging scale and network density.

FACTOR & THEME

Housing market stabilization (existing home sales bottoming) drives new customer acquisition. Benefits from aging housing stock (more breakdowns), inflation (repair cost passthrough to premiums), and DTC shift (less reliance on realtor channel).

BREAKOUT SIGNAL

Close above $100.73 on vol >2.0x of 20d avg

INSTITUTIONAL

Volume surge to 2.01x post-earnings with prox_52w at 97.7% suggests institutional re-rating. Business model is defensive (recurring revenue, low churn) but growth optionality from HVAC and solar add-ons is under-monetized.

EARNINGS

REPORTED

EARNINGS CONTEXT

Reported Nov 5. Rally suggests beat or improved subscriber metrics. Frontdoor historically conservative on guidance; any raised outlook on pricing or TAM expansion (solar, EV chargers) extends the move. Next print ~Feb 2027.

KEY RISK

Thesis invalid on close below $97 (post-earnings support) or housing market re-collapse (mortgage rates spike, killing home sales and new customer adds). Single-product concentration: 90%+ revenue from home warranty limits diversification.

ANALYSIS

Strong RS (+20.1), prox_52w 97.7%, vol surge, and Consumer Disc sector tailwind (+11.0%) confirm post-earnings momentum. Strongest disconfirming evidence: base is very wide (5.09 ATR, second-worst in set), RS line NOT at new high, and forward catalyst is 90+ days away (next earnings Feb 2027). This is a drift play off a good print, not a Qullamaggie breakout with fuel. Risk-Off macro and poor base structure prevent A-grade. Conviction: Medium (RS and sector are strong, but base quality and macro regime limit follow-through odds).

ANALYSIS

CATALYST / TODAY'S DRIVER

Post-earnings strength (reported Nov 5) likely on billings acceleration or margin beat from cloud migration. Forward catalyst: real-time payments adoption (FedNow/RTP volume ramp), potential enterprise contract wins in banking sector, and SaaS ARR growth inflection by Q1 2027 earnings.

BUSINESS & POSITION

ACI Worldwide provides payment processing software to 6,000+ banks, merchants, and billers globally, handling $14T+ in annual transactions. Transitioning legacy on-prem to cloud SaaS (UP platform), targeting recurring revenue expansion and higher multiples.

FACTOR & THEME

Payments infrastructure (secular digitization), real-time payments adoption (FedNow tailwind in U.S.), and SaaS transition re-rating. Benefits from embedded finance trend as non-banks (fintechs, corporates) need licensed payment rails.

BREAKOUT SIGNAL

Close above $61.45 on vol >2.2x of 20d avg

INSTITUTIONAL

Volume surge to 2.24x post-earnings with prox_52w 97.4% suggests re-rating underway. Cloud migration de-risks revenue and improves visibility; institutional buyers likely positioning for SaaS multiple expansion (currently trades at 2.5x sales vs. peers at 6-8x).

EARNINGS

REPORTED

EARNINGS CONTEXT

Reported Nov 5. Post-earnings rally implies beat or raised guidance. ACI historically under-promises; any acceleration in UP platform (SaaS) ARR growth or large enterprise wins would confirm transition narrative. Next print Feb 2027.

KEY RISK

Thesis invalid on close below $59 (post-earnings pivot) or any stall in SaaS migration (clients delaying cloud upgrades due to budget constraints). Payments infrastructure is competitive; Fiserv/FIS have deeper pockets for R&D and M&A.

ANALYSIS

Solid RS (+18.8), high vol (2.24x), prox_52w 97.4% confirm post-earnings breakout attempt. Strongest disconfirming evidence: base is wide (3.86 ATR), RS line NOT at new high, and next earnings 90+ days away-no near-term catalyst. SaaS transition is multi-quarter story; this is a thematic hold, not a momentum trade. Risk-Off macro reduces odds of sustained follow-through. Conviction: Medium (setup quality is decent, but lacks near-term catalyst and macro is hostile).

Signal: Close above $61.45 on vol >2.2x of 20d avg

Vol vs Avg: 2.24x
