ANALYSIS

CATALYST / TODAY'S DRIVER

Clean breakout to 52W high on 1.8x volume with RS line at new high; likely driven by continued commercial traction for AI-powered cardiac CT analysis. Forward catalyst (High impact): November 12 earnings (23d) will update on CMS reimbursement momentum, adoption velocity, and path to profitability - a beat extends the 125% 3-month run.

BUSINESS & POSITION

HeartFlow provides AI-powered, non-invasive cardiac CT analysis (FFR-CT technology) enabling cardiologists to assess coronary artery disease without catheterization. FDA-cleared, growing CMS and commercial payor coverage; category leader in computational cardiac diagnostics with first-mover advantage and extensive clinical validation.

FACTOR & THEME

AI-enabled healthcare diagnostics with secular tailwinds from value-based care, non-invasive procedure shift, and healthcare AI adoption. Theme momentum accelerating - CMS expanded coverage in 2025, and the company is penetrating both hospital and outpatient markets. Healthcare sector leading (+6.5% vs SPY) provides tailwind.

BREAKOUT SIGNAL

Close above $56.30 (52W high) on vol >180% of 20d avg

INSTITUTIONAL

Volume 1.82x average on an 8.96% move reflects measured institutional accumulation rather than retail frenzy. No insider buying in last 90 days. The RS line at new high combined with a tight base (2.77 ATR) is the classic Qullamaggie setup - institutions quietly absorbed supply over weeks, now breaking out with conviction. Float 67M is manageable for a $4.8B company.

EARNINGS

EARNINGS IN 23D

EARNINGS CONTEXT

Next print November 12. Consensus unavailable in dataset. The 125% three-month outperformance suggests the market is pricing in accelerating revenue growth and a path to EBITDA breakeven. If the company beats on revenue and narrows losses more than expected, the November 12 print could trigger another re-rating leg.

KEY RISK

Thesis invalid on a close back below $50.00 (approximate breakout pivot and psychological support), or on any November 12 guidance that shows slowing adoption or extended timeline to profitability, signaling the valuation has run ahead of fundamentals.

ANALYSIS

Five Qullamaggie criteria met: vol >1.8x, prox_52w 98.7, rs_line_new_high true, rs_vs_spy +121.4, base_tight 2.77 - this is a textbook technical breakout from a coiled base with the RS line confirming early leadership. Healthcare sector leadership provides macro tailwind. Strongest disconfirming evidence: the stock is up 125% in three months and is now priced for perfection into the November 12 print - any stumble on revenue guidance or reimbursement delays kills the setup. That said, the technical quality and sector strength support follow-through. Conviction: High.

Signal: Close above $56.30 (52W high) on vol >180% of 20d avg

ANALYSIS

CATALYST / TODAY'S DRIVER

Monster 52% gap on apparent earnings beat/guidance raise drove price to 52W high; RS line at new high confirms early leadership. Forward catalyst: December 8 earnings (49d) provides re-rating opportunity if growth re-accelerates and margins expand.

BUSINESS & POSITION

Braze is a customer engagement platform enabling brands to orchestrate real-time, personalized messaging across email, mobile, web. Competes with Salesforce Marketing Cloud and Adobe; differentiated by mobile-first architecture and real-time data streaming capabilities.

FACTOR & THEME

Marketing automation SaaS with exposure to enterprise digital transformation and shift from batch-and-blast to real-time personalization. Theme momentum steady but not accelerating - enterprise software buying remains cautious post-2023 pullback.

BREAKOUT SIGNAL

Close above $45.61 (52W high) on vol >3200% of 20d avg

INSTITUTIONAL

Volume 32.6x average signals institutional block buying on the gap, not retail chase. No insider buying in last 90 days. The extreme volume surge and RS line at new high suggest smart money repositioning ahead of a potential growth inflection, but float is large (94M) so follow-through requires sustained institutional accumulation.

EARNINGS

EARNINGS IN 49D

EARNINGS CONTEXT

Next print December 8. Consensus EPS/rev unavailable in dataset, but the 52% gap strongly implies a material beat and guidance raise. If this is a serial beater establishing a new growth trajectory, the setup has legs; if one-time, it exhausts quickly.

KEY RISK

Thesis invalid on a close back below the $30.00 pre-gap base, or any guidance disappointment at the December 8 print that suggests the beat was pull-forward rather than sustainable re-acceleration.

ANALYSIS

RS line at new high and explosive volume on a 52% gap check all leadership boxes, but base_tight of 12.9 reveals this is a volatile gap-and-go, not a textbook coil - the wide base suggests the move is shock-driven rather than absorption-based. Strongest disconfirming evidence: the stock is now massively extended into the December 8 print with 49 days of potential chop and profit-taking ahead; incremental buyers may wait for a digest. The setup was A-grade at the gap open; at the close it's a momentum follow with binary event risk. Conviction: Medium.

Signal: Close above $45.61 (52W high) on vol >3200% of 20d avg

Short %	**-**
Days to Cover	**-**
Inst. Own	**- (data lag)**

ANALYSIS

CATALYST / TODAY'S DRIVER

Breakout on 2.2x volume from a tight VCP base (1.9 ATR); likely driven by continued zanidatamab (HER2-targeted bispecific) Phase 3 momentum. Forward catalyst (High impact): November 9 earnings (20d) could provide clinical trial enrollment updates or partnership/licensing news; FDA filing for zanidatamab expected late 2026/early 2027 is the major binary catalyst on the horizon.

BUSINESS & POSITION

Zymeworks develops antibody-drug conjugates and bispecific antibodies for oncology, leveraging proprietary Azymetric and ZymeLink platforms. Lead asset zanidatamab targets HER2+ cancers (biliary tract, gastroesophageal); pivotal Phase 3 data expected to support FDA filing. Category: clinical-stage oncology biotech with differentiated platform technology and multiple partnered programs (GSK, Jazz, others).

FACTOR & THEME

Biotechnology with focus on antibody-drug conjugates, a hot sub-sector following AbbVie/Immunogen acquisition and continued ADC M&A. Healthcare sector leading (+6.5% vs SPY) provides tailwind. Theme momentum strong - ADC valuations re-rated in 2025-26 on commercial successes and takeout premiums.

BREAKOUT SIGNAL

Close above $26.91 on vol >220% of 20d avg

INSTITUTIONAL

Volume 2.2x average on a 5.36% move suggests institutional accumulation into the tight base. No insider buying in last 90 days. The base_tight of 1.9 is textbook VCP territory - classic absorption pattern. Float 65.8M is reasonable for a $1.9B biotech, allowing for rapid re-rating on positive data or partnership news. The lack of RS line new high tempers the grade to B despite otherwise strong technicals.

EARNINGS

EARNINGS IN 20D

EARNINGS CONTEXT

Next print November 9. Biotech earnings typically focus on clinical trial updates, cash runway, and partnership milestones rather than revenue. Key watch: zanidatamab Phase 3 enrollment progress, regulatory filing timeline, and any updates on partnered programs or new licensing deals that validate the platform.

KEY RISK

Thesis invalid on a close back below $24.50 (approximate base support), or on any clinical setback (trial delay, safety signal, or enrollment miss) disclosed at or before the November 9 update.

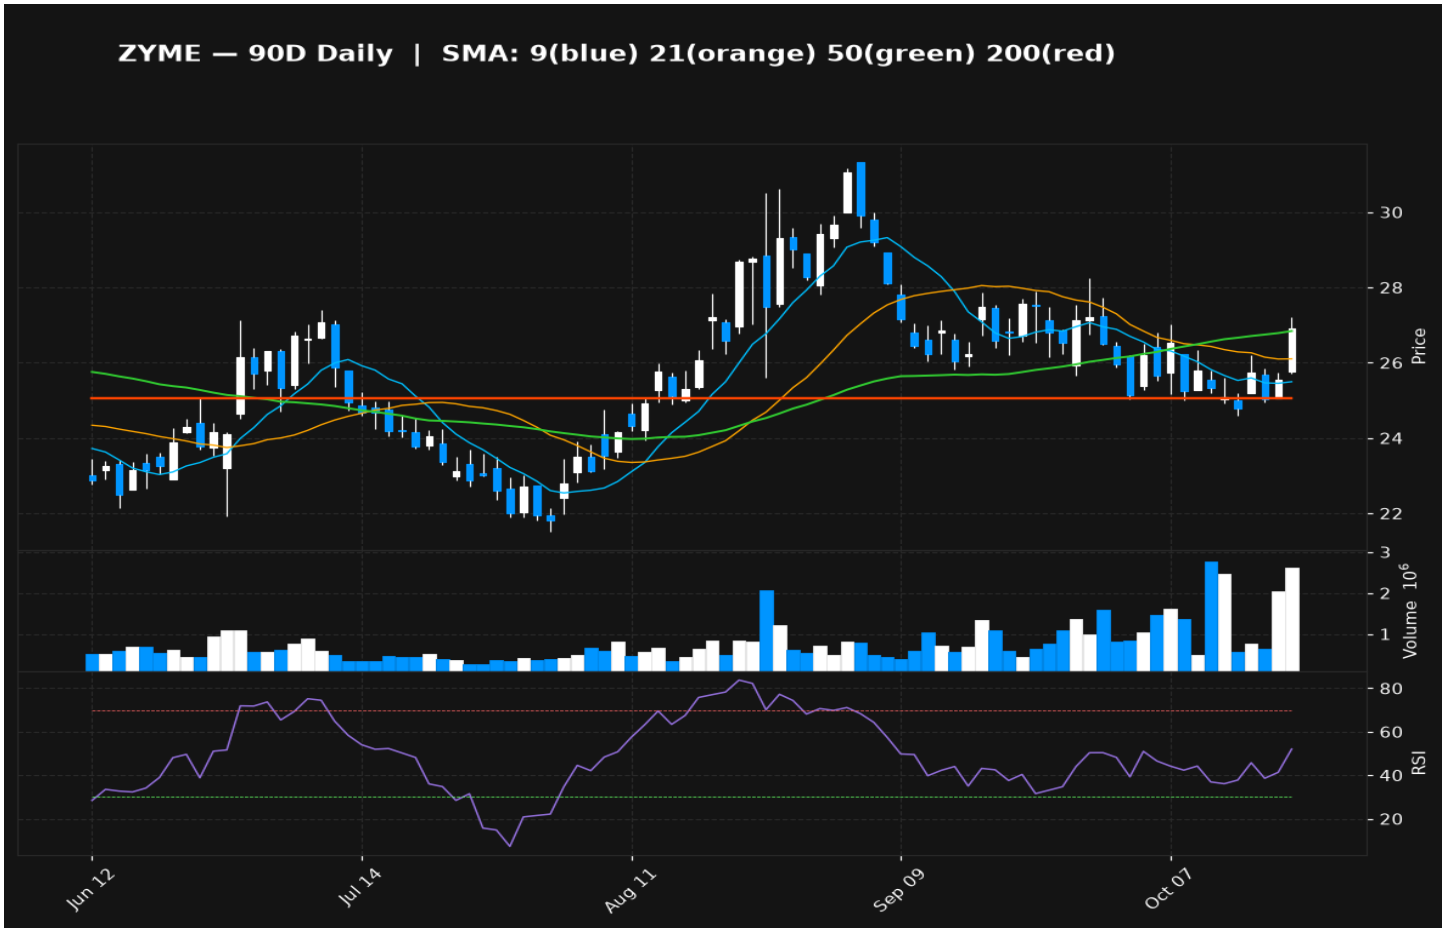

ANALYSIS

Volume 2.2x, prox_52w 85.9, base_tight 1.9, and healthcare sector leadership are all A-grade inputs, but rs_line_new_high is false - the RS line not at new high downgrades this from A to a strong B. Strongest disconfirming evidence: biotech is binary, and with no concrete catalyst announcement today, the breakout could be speculative positioning ahead of November 9 earnings rather than institutional conviction on imminent data; if the print disappoints, the stock gaps back into the base. Conviction: Medium.

Signal: Close above $26.91 on vol >220% of 20d avg

RS Line Hi	**no**
Above 50MA	**-**
Fwd P/E	**-**
Short %	**-**
Days to Cover	**-**
Inst. Own	**- (data lag)**

ANALYSIS

CATALYST / TODAY'S DRIVER

Breakout to 96.4% of 52W high on 2x volume, likely driven by election-cycle demand fears (November 2026 midterms) and/or October 28 earnings positioning. Forward catalyst (High impact): October 28 earnings (8d) will confirm Q3 demand trends and Q4 guidance; a beat + strong guide into year-end (election) extends the move. Defense/Aerospace exposure also captures sector rotation.

BUSINESS & POSITION

Sturm Ruger manufactures firearms (handguns, rifles, shotguns) for sporting, law enforcement, and self-defense markets. Market leader in U.S. consumer firearms with vertically integrated production. Cyclical demand tied to political/regulatory backdrop, hunting seasons, and election-year purchasing spikes.

FACTOR & THEME

Defense & firearms with exposure to election-cycle buying (November 2026 midterms driving pre-election stockpiling) and broader Aerospace & Defense sector rotation. Defense spending tailwind is more relevant to prime contractors, but firearms see election-driven volatility. Sector not leading vs Energy/Healthcare, but the election catalyst is idiosyncratic and near-term.

BREAKOUT SIGNAL

Close above $48.74 on vol >200% of 20d avg

INSTITUTIONAL

Volume 2.03x on a 6.19% move is respectable, but float is tiny (14M) so moves can be exaggerated. No insider buying in last 90 days. Institutional ownership in firearms is often light due to ESG constraints, making this more of a hedge fund / specialty long rather than broad institutional buy. The tight float and election setup create short-squeeze potential if positioned right.

EARNINGS

EARNINGS IN 8D

EARNINGS CONTEXT

Next print October 28 (8d). Consensus unavailable in dataset. Firearms earnings are seasonal (Q4 strong, Q1 weak) and politically sensitive. Key metrics: unit shipments, ASP, retailer inventory levels, and Q4 guidance into the election. The stock's 28.8% three-month RS suggests the market expects a strong print and/or elevated Q4 guide.

KEY RISK

Thesis invalid on a close back below $45.00 (approximate breakout support), or on an October 28 miss/weak guide signaling election-cycle demand has already peaked or retailer inventory is elevated.

ANALYSIS

Volume 2x, prox_52w 96.4, rs_vs_spy +24.3 are all strong, but base_tight 4.02 is wide and rs_line_new_high is false - the setup lacks the textbook coil and RS confirmation for an A. Strongest disconfirming evidence: firearms stocks are notoriously volatile and sentiment-driven; the October 28 print is binary, and if demand proves to have already peaked or guidance disappoints, the stock gaps down hard. The 8-day proximity to earnings is a double-edged sword. Conviction: Medium.

Signal: Close above $48.74 on vol >200% of 20d avg

RS Line Hi	**no**
Above 50MA	**-**
Fwd P/E	**-**
Short %	**-**
Days to Cover	**-**
Inst. Own	**- (data lag)**

ANALYSIS

CATALYST / TODAY'S DRIVER

Breakout on 1.73x volume; likely positioning ahead of October 28 earnings (8d) with hopes for improved revenue growth and margin expansion as digital banking spend recovers. Forward catalyst (High impact): the October 28 print itself, plus any upside guide for Q4/FY27 that signals regional bank IT budgets are loosening.

BUSINESS & POSITION

Q2 provides cloud-based digital banking solutions (online/mobile banking, lending, payments) to regional banks and credit unions. Competes with FIS, Fiserv, and Temenos; differentiated by modern cloud-native architecture and focus on tier-2/3 FIs. Business is sticky (long implementations, high switching costs) but growth sensitive to bank IT spending cycles.

FACTOR & THEME

Fintech SaaS with exposure to regional bank digital transformation. Theme momentum decelerating - regional banks remain cautious on IT spend post-SVB crisis and deposit competition. The upcoming earnings will test whether budgets are stabilizing. Software sector rotation has been mixed; not a leading theme currently.

BREAKOUT SIGNAL

Close above $65.96 on vol >170% of 20d avg

INSTITUTIONAL

Volume 1.73x on a 6% move is solid but not explosive. No insider buying in last 90 days. Float 61.3M is manageable. The lack of RS line new high and the wide base (4.86) suggest this is early-stage recovery positioning rather than institutional conviction breakout. Q2's customer base (regional banks) has been under pressure, so institutions will want proof of demand recovery before committing large size.

EARNINGS

EARNINGS IN 8D

EARNINGS CONTEXT

Next print October 28 (8d). Consensus unavailable in dataset. Q2's recent history: growth decelerated in 2024-25 as regional bank IT budgets froze; the key question is whether Q3 shows stabilization or reacceleration. Margin expansion would also be well-received. The 24.7% three-month RS suggests some optimism, but the stock is still 14% below 52W high, indicating caution remains.

KEY RISK

Thesis invalid on a close back below $60.00 (round psychological support and approximate base pivot), or on an October 28 miss or soft guide that confirms regional bank IT spend remains frozen.

ANALYSIS

Volume 1.73x, rs_vs_spy +20.3, prox_52w 86.5 are all constructive, but base_tight 4.86 is wide and rs_line_new_high is false - this is a recovery trade, not a leadership breakout. Strongest disconfirming evidence: the October 28 print is 8 days away and is a binary catalyst; if Q3 revenue or guidance disappoints (regional bank spend still weak), the stock gaps down and re-tests the base. The setup is pre-earnings positioning, not a durable technical breakout. Conviction: Medium.

Signal: Close above $65.96 on vol >170% of 20d avg

Inst. Own	**- (data lag)**

ANALYSIS

CATALYST / TODAY'S DRIVER

Approaching 52W high on 2.46x volume, likely driven by housing sentiment improvement and/or November 4 earnings positioning. Forward catalyst (High impact): November 4 earnings (15d) will test whether composite decking demand is recovering as mortgage rates stabilize and repair/remodel activity picks up.

BUSINESS & POSITION

Trex is the category leader in composite (wood-alternative) decking and railing for residential outdoor living. Competes with Azek and traditional wood; differentiated by brand, distribution scale (Home Depot, Lowe's), and sustainability messaging. Cyclical exposure to housing, especially repair/remodel which represents ~80% of decking demand.

FACTOR & THEME

Residential construction and repair/remodel with indirect exposure to housing recovery. Theme momentum mixed - mortgage rates have stabilized but new home construction remains subdued; repair/remodel (Trex's core) is less rate-sensitive but still cyclical. Industrials sector not leading currently.

BREAKOUT SIGNAL

Close above $48.79 on vol >240% of 20d avg

INSTITUTIONAL

Volume 2.46x on a 4.95% move reflects solid institutional interest. No insider buying in last 90 days. Float 95.6M is large, so sustained follow-through requires broad institutional support. The lack of RS line new high and moderate base_tight (3.35) suggest this is a quality name recovering from cyclical trough rather than a momentum leader.

EARNINGS

EARNINGS IN 15D

EARNINGS CONTEXT

Next print November 4 (15d). Consensus unavailable in dataset. Trex's recent history: volumes pressured in 2024-25 by housing slowdown and high inventory at retailers. Key watch: Q3 volume trends, pricing, and Q4/2027 guide. If the company signals demand inflection and margin recovery, the stock has room to run. The 15.1% three-month RS suggests some optimism.

KEY RISK

Thesis invalid on a close back below $46.00 (approximate recent base support), or on a November 4 miss/weak guide confirming decking demand remains soft and inventory destocking continues.

ANALYSIS

Volume 2.46x, prox_52w 94.3 are strong, but rs_vs_spy +10.7 is modest, rs_line_new_high is false, and base_tight 3.35 is decent but not exceptional. Strongest disconfirming evidence: Trex is a cyclical recovering from trough, and the November 4 print is a binary test of whether the housing/remodel cycle has truly bottomed; if demand remains soft or guidance disappoints, the stock re-tests support. The setup is solid but not exceptional in a risk-on/large-cap leadership regime where SMID cyclicals face crosswinds. Conviction: Medium.

Signal: Close above $48.79 on vol >240% of 20d avg

ANALYSIS

CATALYST / TODAY'S DRIVER

7.55% move on 2.27x volume; likely driven by solid waste pricing power narrative and/or positioning ahead of November 9 earnings (20d). Forward catalyst (Med impact): November 9 earnings will test volume/pricing trends and capital deployment (acquisitions); a beat extends the move, but the sector lacks a major secular catalyst currently.

BUSINESS & POSITION

Casella is a regional solid waste, recycling, and organics services provider concentrated in the Northeast U.S. Vertically integrated with collection, transfer, disposal (landfills), and recycling assets. Competes with Waste Management, Republic Services, and regional independents; differentiated by Northeast density and sustainability/organics focus.

FACTOR & THEME

Waste management with exposure to commercial/industrial activity, landfill scarcity value, and ESG-driven organics/recycling. Theme momentum neutral - waste is a steady-growth utility-like business but lacks major secular tailwind currently. Pricing power narrative (inflation pass-through) has been positive but is mature.

BREAKOUT SIGNAL

Close above $93.07 on vol >220% of 20d avg

INSTITUTIONAL

Volume 2.27x on a 7.55% move suggests institutional interest. No insider buying in last 90 days. Float 62.3M is manageable. The lack of RS line new high and negative rs_vs_spy (-1.1) indicate this is a laggard catching up rather than a leader breaking out. Waste stocks are typically owned by value/dividend funds rather than growth momentum players.

EARNINGS

EARNINGS IN 20D

EARNINGS CONTEXT

Next print November 9 (20d). Consensus unavailable in dataset. Waste companies typically deliver steady, predictable results with focus on volume, pricing (CPI-plus), and acquisition activity. The 3.4% three-month RS is mediocre, suggesting modest expectations. A beat would be well-received but unlikely to trigger a major re-rating absent a transformative acquisition or margin surprise.

KEY RISK

Thesis invalid on a close back below $86.00 (approximate breakout pivot and psychological support), or on a November 9 miss/weak guide signaling volume or pricing pressure.

ANALYSIS

Volume 2.27x and prox_52w 86.2 are solid, but rs_vs_spy -1.1, rs_line_new_high false, and base_tight 3.71 (wider than ideal) all limit the grade. Strongest disconfirming evidence: negative relative strength vs SPY means this is underperforming the market recently despite the 7.55% pop - it's a catch-up move in a defensive sector, not a momentum leader. In a risk-on/large-cap regime, defensive waste names face institutional outflows. Conviction: Low.

Signal: Close above $93.07 on vol >220% of 20d avg

ANALYSIS

CATALYST / TODAY'S DRIVER

11.93% surge on 2.31x volume, likely driven by SaaS sector rotation and/or November 4 earnings positioning. Forward catalyst (Med impact): November 4 earnings (15d) will test whether e-commerce marketing spend is recovering and SMB customer retention is stabilizing; a beat + strong guide extends the move.

BUSINESS & POSITION

Klaviyo provides email and SMS marketing automation for e-commerce businesses, with deep integrations into Shopify, WooCommerce, and other platforms. Competes with Mailchimp (Intuit), Braze, and Iterable; differentiated by e-commerce-native data model and ease of use for SMB/mid-market. IPO'd September 2023.

FACTOR & THEME

E-commerce marketing SaaS with exposure to online retail growth and SMB digital marketing spend. Theme momentum neutral - e-commerce growth has normalized post-COVID, and SMB budgets remain tight. The stock is still well below its IPO range (~$30s), indicating caution around the growth trajectory.

BREAKOUT SIGNAL

Close above $19.61 on vol >230% of 20d avg

INSTITUTIONAL

Volume 2.31x on an 11.93% move is solid. No insider buying in last 90 days. Float is large (125.5M), typical of a recent IPO with lockup expiries behind it. The lack of RS line new high and prox_52w of only 58.8 (still 41% below 52W high) indicate this is a recovery from post-IPO lows rather than a breakout. Institutions will need proof of reacceleration at November 4 earnings.

EARNINGS

EARNINGS IN 15D

EARNINGS CONTEXT

Next print November 4 (15d). Consensus unavailable in dataset. As a 2023 IPO, Klaviyo is still building its earnings track record. Key watch: revenue growth rate (needs to stay >20%), SMB vs enterprise mix, Shopify partnership health, and margin trajectory. The 25.1% three-month RS suggests some optimism, but the stock is still digesting the IPO.

KEY RISK

Thesis invalid on a close back below $17.50 (approximate recent base support), or on a November 4 miss/weak guide confirming SMB marketing budgets remain under pressure and growth is decelerating.

ANALYSIS

Volume 2.31x, rs_vs_spy +20.7, and base_tight 2.94 are all constructive, but prox_52w 58.8 and rs_line_new_high false mean this is a bounce off lows, not a breakout. Strongest disconfirming evidence: the stock is still 41% below its 52W high and has yet to prove it can sustain growth post-IPO; the November 4 print is a binary test, and if SMB spend is still weak or churn elevated, the stock re-tests the lows. The setup is speculative recovery positioning, not institutional-quality breakout. Conviction: Medium.

Signal: Close above $19.61 on vol >230% of 20d avg

Vol vs Avg: 2.31x
