ANALYSIS

CATALYST / TODAY'S DRIVER

Breaking out to within 0.2% of 52-week highs post-earnings on a 7% surge, riding strong tanker rate momentum. Forward catalyst: sector rotation into Energy (+9.4% this week) extends as crude volatility and geopolitical tensions support elevated day rates through Q4 2026; next earnings January 2027 will show further rate strength.

BUSINESS & POSITION

Scorpio Tankers operates one of the world's largest product tanker fleets, capitalizing on elevated shipping rates driven by crude price volatility and geopolitical routing changes. The company benefits from tight vessel supply and high utilization in a structurally favorable market.

FACTOR & THEME

Direct play on energy transition complexity and geopolitical shipping disruptions - both secular tailwinds accelerating. Energy sector momentum (+9.4% vs SPY this week) is strong and the tanker spot rate environment remains robust heading into winter demand.

BREAKOUT SIGNAL

Close above $95.07 on vol >1.76x of 20d avg

INSTITUTIONAL

Volume 1.76x average suggests institutional participation, but no insider buying in the last 90 days. Float is modest at 38M shares and the stock is at 52-week highs, indicating fund positioning ahead of further sector strength. No accumulation/distribution data provided.

EARNINGS

REPORTED

EARNINGS CONTEXT

Reported October 28 - the 7% surge today confirms a beat or strong guidance. Historical earnings context not provided, but the post-earnings breakout to new highs is itself the signal of institutional approval.

KEY RISK

Thesis invalid on a close back below $88.50 (approximate 20MA support) or if crude prices collapse, taking tanker rates down with them. Highly cyclical sector exposure means macro risk-off would hit hard.

ANALYSIS

Strongest disconfirming evidence: RS line NOT at new high despite price nearly at 52w high, and base_tight of 4.31 is wide - this is a sector-driven surge, not a textbook coiled setup. The move is real (Energy sector leading, prox_52w 99.8, strong RS), but the base quality downgrades it from A. In a mixed macro regime, sector momentum can fade quickly. Conviction: Medium.

Signal: Close above $95.07 on vol >1.76x of 20d avg

Vol vs Avg: 1.76x

ANALYSIS

CATALYST / TODAY'S DRIVER

Post-earnings breakout (reported Oct 28) with 3.4% follow-through, volume 1.87x, and base_tight exactly 2.0 - textbook coil quality. Forward catalyst: retail/logistics RFID adoption accelerating into holiday 2026; potential guidance raise or new partnership announcements through Q4 as inventory tracking demand scales.

BUSINESS & POSITION

Impinj is the leader in RAIN RFID solutions and IoT connectivity, enabling real-time item tracking for retail, logistics, healthcare, and industrial applications. The company benefits from secular adoption of supply-chain visibility and inventory automation.

FACTOR & THEME

IoT infrastructure, supply-chain digitization, and edge computing tailwind. Not a direct AI play, but adjacent to AI-driven logistics optimization. Theme momentum is steady as retailers and logistics providers scale RFID deployments.

BREAKOUT SIGNAL

Close above $182.55 on vol >1.87x of 20d avg

INSTITUTIONAL

Volume 1.87x on a post-earnings move suggests institutional re-rating. No insider buying in last 90 days. Float is tight at 29.6M, and RS +11.3 vs SPY indicates smart money has been positioned ahead of the setup. No accumulation/distribution data provided.

EARNINGS

REPORTED

EARNINGS CONTEXT

Reported October 28 - the 3.4% follow-through today confirms a beat or strong guidance. Consensus EPS/rev not provided, but the breakout after earnings is the institutional vote of confidence.

KEY RISK

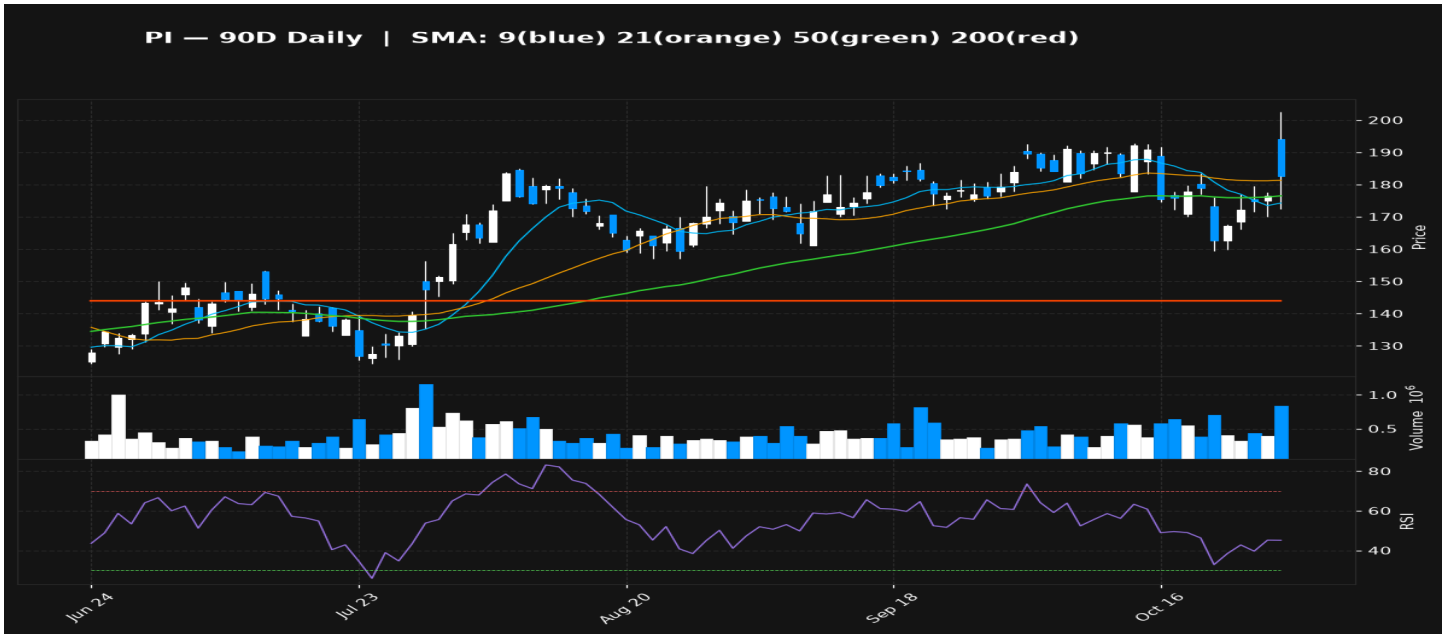

Thesis invalid on a close back below $175 (approximate breakout pivot) or if semiconductor supply constraints re-emerge, pressuring gross margins. Mixed macro regime means cyclical tech exposure carries elevated risk.

ANALYSIS

Strongest disconfirming evidence: RS line not at new high and prox_52w only 81.8 - not yet in true breakout zone (>85). The setup quality (base_tight 2.0, vol 1.87x, RS +11.3) is strong, but the lack of RS leadership confirmation and distance from 52w high keeps this a B. In a mixed regime, waiting for full breakout confirmation (>85 prox) is prudent. Conviction: Medium.

Above 50MA	**-**
Fwd P/E	**-**
Short %	**-**
Days to Cover	**-**
Inst. Own	**- (data lag)**

ANALYSIS

CATALYST / TODAY'S DRIVER

Post-earnings surge (reported Oct 28) with volume 2.22x and prox_52w 88.4 - in breakout zone. Forward catalyst: Energy sector momentum (+9.4% this week) extends as drilling activity picks up into 2027; wellhead equipment demand scales with rig count recovery and upstream capex increases.

BUSINESS & POSITION

Cactus manufactures and services wellhead and pressure control equipment for oil and gas drilling, completing, and producing. The company benefits from North American upstream capex cycles and increased drilling efficiency demand.

FACTOR & THEME

Energy infrastructure and onshore drilling recovery tailwind. Positioned for the upstream capex recovery as E&Ps shift from cost-cutting to growth mode. Energy sector is a top performer this week (+9.4% vs SPY), supporting the move.

BREAKOUT SIGNAL

Close above $65.49 on vol >2.22x of 20d avg

INSTITUTIONAL

Volume 2.22x on post-earnings day is strong institutional signal. No insider buying in last 90 days. Float 59M and RS barely positive at +1.0 suggests this is early in a potential re-rating cycle - not yet consensus-loved. No accumulation/distribution data.

EARNINGS

REPORTED

EARNINGS CONTEXT

Reported October 28 - the 1.79% follow-through and 2.22x volume confirm institutional approval. Specific EPS/rev consensus not provided, but the technical breakout is the validation.

KEY RISK

Thesis invalid on a close back below $62.50 (approximate 20MA pivot) or if crude prices collapse, halting upstream capex recovery. Cyclical energy exposure means macro risk-off kills the trade.

ANALYSIS

Strongest disconfirming evidence: RS +1.0 is barely positive - this is not a relative strength leader yet, despite the strong volume and proximity to 52w high. The setup (vol 2.22x, prox_52w 88.4, base_tight 2.28) is solid, but weak RS and the lack of RS line at new high keep conviction muted. Energy sector strength is the carry, but RS needs to catch up. Conviction: Medium.

Signal: Close above $65.49 on vol >2.22x of 20d avg

Vol vs Avg: 2.22x
