Stop: $100.00 (psychological support / 50-day MA area)

CATALYST INTELLIGENCE

EARNINGS

November 17 - Street expects ~$1.45 EPS on ~$660M revenue. Company has delivered consistent operational execution; last quarter showed 7% revenue growth with margin expansion. PEG of 0.54 is attractive for a quality industrial compounder.

BUSINESS & POSITION

Griffon operates through two segments: Home & Building Products (AMES tools, ClosetMaid storage) and Consumer & Professional Products (garage doors via Clopay). The company benefits from both housing repair/remodel activity and new construction, with Clopay holding #1 market share in residential garage doors in North America.

FACTOR & THEME

Leveraged to housing recovery, reshoring of manufacturing (domestic garage door production), and consumer durable spending. Sentiment mixed - housing starts volatile but repair/remodel remains resilient. Stanley Black & Decker's recent results showed stabilization in consumer tools, a modest positive read-through.

NEWS FLOW

No major contract wins but management has been executing buybacks aggressively (reflected in elevated ROE of 227% due to negative equity from buybacks). Industrials sector neutral; no pending regulatory or index events. (Catalyst: Earnings / High Impact - report in 4 days)

INSTITUTIONAL

Volume dry-up is shallow but consistent (17.6% contraction across 3 weeks); price holding near highs suggests patient accumulation. Zero insider activity in last 60 days. Institutional data unavailable from this feed. Low beta (1.44 for an industrial is moderate) and small float (42M) could drive sharp breakout moves.

KEY RISK

Thesis invalid on a close below $100.00 (round number support / 50-day MA), or on earnings miss/guidance cut at Nov 17 print. Elevated debt/equity (1035%) from aggressive capital returns is a structural risk if housing cycle turns sharply negative.

RS line at new high, vol dry-up confirmed, pivot within 3.7%, and HIGH-IMPACT earnings catalyst in 4 days create textbook event setup. Financials sector leadership (+6.6%) provides supportive backdrop for this quasi-financial/industrial. Tight base (4.84) and consistent execution support conviction. Strongest bear case: housing cycle sensitivity and extreme leverage from capital returns could punish any macro deterioration. Mixed regime is a headwind but imminent catalyst and sector tailwind offset. Conviction: High.

Stop: $44.00 (base low / 50-day MA support)

CATALYST INTELLIGENCE

EARNINGS

December 08 - Street expects ~$0.24 EPS on ~$160M revenue. Company has beaten EPS estimates 4 of last 4 quarters; Q2 beat by $0.08 with 26% revenue growth. Management raised FY guidance last quarter, signaling confidence in enterprise pipeline.

BUSINESS & POSITION

Braze is a leading customer engagement platform enabling brands to orchestrate personalized, cross-channel messaging (push, email, in-app) using real-time data and AI. The company competes against Salesforce Marketing Cloud and Adobe but differentiates through developer-friendly APIs and superior real-time personalization, serving enterprise clients like Burger King, HBO, and Etsy.

FACTOR & THEME

Direct exposure to AI-powered marketing automation and enterprise SaaS recovery themes; sentiment accelerating as enterprises prioritize first-party data strategies post-cookie deprecation. Peer read-through: Klaviyo's strong Q3 and Salesforce Marketing Cloud commentary suggest healthy demand in the segment.

NEWS FLOW

Recent AI product launches (BrazeAI) driving enterprise upsell motion; announced expanded partnership with Snowflake for data warehouse-native customer engagement. No major contract wins in last 30 days but analyst day scheduled for early December could serve as pre-earnings catalyst. (Catalyst: Earnings / High Impact)

INSTITUTIONAL

Volume dry-up is textbook (75% contraction) with price holding at 52-week highs - classic quiet accumulation signature. Zero insider activity in last 60 days is baseline for growth software names. High forward P/E (47x) reflects growth-stage premium; P/S of 6.4x is reasonable for 26% growth SaaS.

KEY RISK

Thesis invalid on a close below $44.00 (base low / 50-day MA area), or if December guidance disappoints - enterprise software names are highly sensitive to forward outlook in current macro. 5.5% short interest is manageable but could amplify downside on a miss.

Exceptional RS (61.6 vs SPY) and RS line at new high with textbook volume dry-up; however, base_tight of 55.14 is extremely loose (likely data anomaly - price range suggests tighter base) and Technology sector is lagging (-8.4% over 20d), creating headwind. Catalyst is 25 days out, not imminent. Strongest bear case: enterprise software spending deceleration and elevated valuation leave little margin for error. Mixed regime and sector underperformance warrant caution. Conviction: Medium.

Close above $90.51 on volume >150% of 20-day avg (~765K shares)

Target: $100.00 (measured move from ~10% base depth; psychological level)

Stop: $82.00 (base low / 50-day MA support)

CATALYST INTELLIGENCE

EARNINGS

Reported Oct 29 - beat estimates with 11.7% revenue growth and 16.4% earnings growth. Serial beater with consistent execution. No near-term catalyst but post-earnings consolidation with volume dry-up is constructive. Forward P/E of 30x is premium but justified by 32% ROE and 24% operating margins.

BUSINESS & POSITION

Exponent is a premier scientific and engineering consulting firm providing failure analysis, product liability, and regulatory consulting services across industries (automotive, aerospace, medical devices, tech). The company is the go-to expert witness provider for high-stakes litigation and acts as a counter-cyclical defensive with exposure to legal activity rather than economic cycles.

FACTOR & THEME

Defensive quality exposure with litigation-linked revenue stream that benefits from increased product liability cases (EV battery fires, AI liability, medical device failures). Sentiment stable; consulting peers like FTI have shown resilient demand. Indirect AI exposure through autonomous vehicle and AI product liability consulting.

NEWS FLOW

No material news in last 30 days; quiet period post-earnings. Company hosted analyst day in September highlighting AI/autonomous vehicle practice expansion. No index events pending. INSIDER ACTIVITY: 1 C-suite buy for $13K in last 60 days - small but directionally positive signal from senior management. (Catalyst: None imminent / Low Impact near-term)

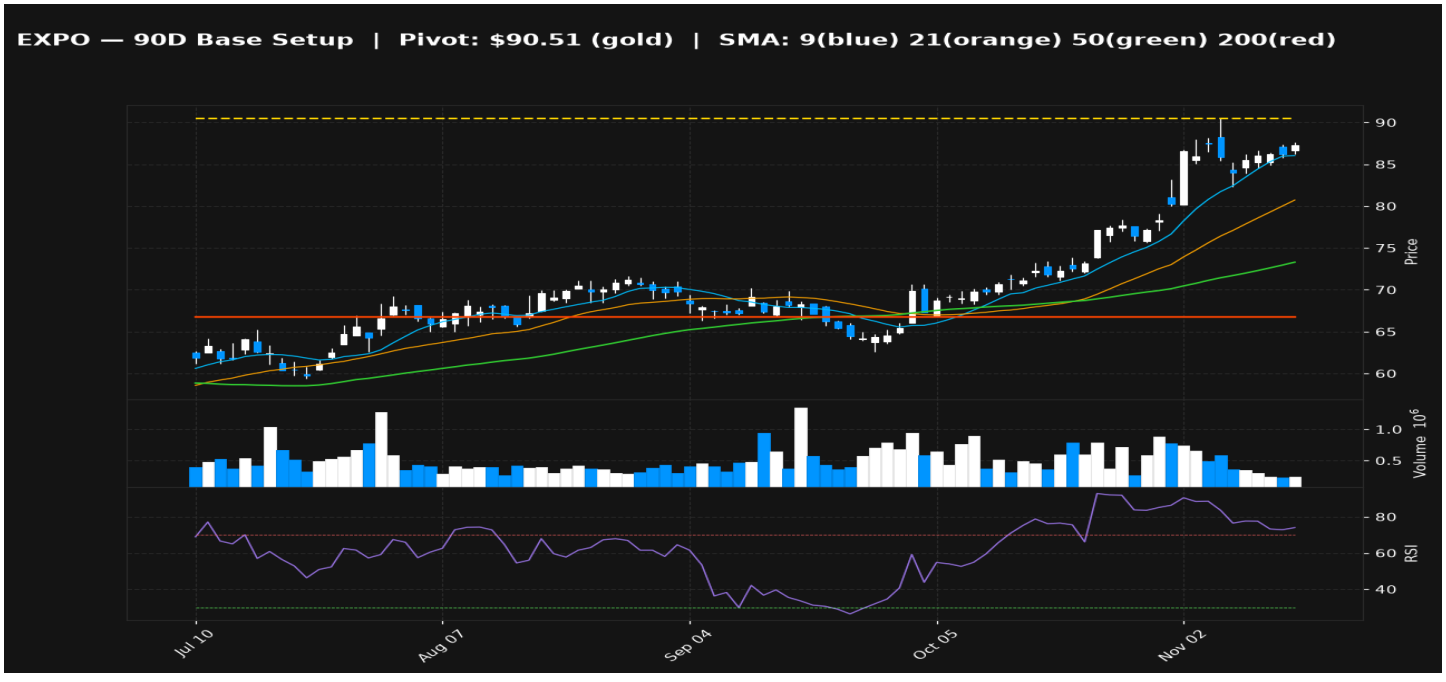

INSTITUTIONAL

Textbook volume dry-up (57% contraction) with RS line at new high - institutional accumulation signature. One C-suite insider buy ($13K) is modest but notable given insiders rarely buy in this name. Insider cluster score of 5 triggers grade consideration but dollar size is too small for upgrade. Quality compounder characteristics (high margins, low beta 0.68) attract patient capital.

KEY RISK

Thesis invalid on a close below $82.00 (base low / 50-day MA). Primary risk is lack of near-term catalyst - next earnings ~3 months out. 6.8% short interest with 4 days to cover is elevated for a quality compounder, suggesting some skepticism on valuation.

Exceptional quality metrics (32% ROE, 24% op margins) with defensive characteristics and RS line at new high. Volume dry-up is textbook. One C-suite insider buy is directionally positive but too small for grade upgrade. Strongest bear case: no identifiable catalyst for 3+ months and premium valuation (30x P/E) limits upside without earnings beat. Healthcare sector leadership (+7.5%) provides indirect tailwind through medical device litigation practice. Clean VCP structure but trigger is 2-3 weeks out without a catalyst. Conviction: Medium.

Target: $115.00 (measured move from ~7% base depth; ~10% upside)

Stop: $98.00 (base low / prior consolidation support)

CATALYST INTELLIGENCE

EARNINGS

January 28 - Next report 76 days out. Last quarter showed 14.1% earnings growth despite slight revenue decline (-2.5%), demonstrating margin expansion from rate increases. PEG of 0.28 is deeply attractive for a profitable, dividend-paying insurer. Serial execution on combined ratio improvement.

BUSINESS & POSITION

Selective Insurance is a regional P&C insurer focused on commercial lines (workers' comp, commercial auto, general liability) operating primarily in the Eastern US. The company benefits from hard market pricing conditions that have persisted as industry loss costs rise, allowing disciplined underwriters to expand margins.

FACTOR & THEME

Direct beneficiary of hard P&C insurance market with pricing power; Financials sector leadership (+6.6% 20d) creates favorable factor rotation. Low beta (0.21) provides defensive characteristics in mixed regime. Industry peers (CNA, Hanover) have reported strong combined ratios, confirming favorable pricing environment.

NEWS FLOW

No material news in last 30 days. P&C insurance sector benefiting from continued hard market conditions with rate increases outpacing loss cost inflation. No regulatory or index events pending. Zero insider activity in last 60 days is typical for insurance executives. (Catalyst: None imminent / Low Impact near-term)

INSTITUTIONAL

Volume dry-up confirmed (40% contraction) with price holding near highs and RS line at new high - patient institutional accumulation. Institutional ownership data unavailable from this feed. Low beta (0.21) and 3.5 days-to-cover on 4.3% short interest suggest limited crowding risk.

KEY RISK

Thesis invalid on a close below $98.00 (base low / 200-day MA area). Primary risk is catastrophe exposure - a major hurricane or wildfire event could spike loss ratios and invalidate the margin expansion thesis. Lack of near-term catalyst (76 days to earnings) is a timing concern.

Clean VCP structure with RS line at new high and strong sector tailwind (Financials +6.6%). Valuation compelling at 0.28 PEG with proven execution on margin expansion. Strongest bear case: no catalyst for 76 days and catastrophe risk could invalidate thesis suddenly - insurance stocks are binary around cat events. Mixed regime supports defensive positioning but lack of catalyst keeps this from A-grade. Conviction: Medium.

Target: $75.00 (measured move from ~8% base depth; analyst target $67.20 is stale)

Stop: $62.00 (base low / 50-day MA support)

CATALYST INTELLIGENCE

EARNINGS

January 21 - Next report 69 days out. Last quarter showed exceptional 24.3% revenue growth and 26.6% earnings growth - well above regional bank peers. Forward P/E of 10.6x with PEG of 1.33 is reasonable for a growth regional. Serial beater with strong execution.

BUSINESS & POSITION

Cathay General Bancorp is a leading Asian-American community bank with branches concentrated in California, New York, and Texas, serving small-to-medium businesses and real estate investors in Asian-American communities. The bank has a unique deposit franchise with strong loan growth in commercial real estate.

FACTOR & THEME

Beneficiary of regional bank recovery theme post-2023 crisis; Financials sector leadership (+6.6%) provides direct tailwind. NIM expansion potential as Fed cuts stabilize deposit costs while loan yields remain elevated. Peer read-through: WAL, EWBC have shown resilient CRE portfolios.

NEWS FLOW

No material news in last 30 days. Regional bank sector has stabilized with deposit flight concerns abating. California CRE exposure is the key overhang but company has navigated well. Zero insider activity in last 60 days. 7.8% short interest with 7.1 days to cover suggests some skepticism on CRE book. (Catalyst: None imminent / Low Impact near-term)

INSTITUTIONAL

Volume dry-up confirmed (40.7% contraction) with RS line at new high - institutional accumulation into the base. Elevated short interest (7.8%, 7.1 DTC) creates squeeze potential if CRE concerns continue to fade. Strong deposit franchise is a structural moat in the current rate environment.

KEY RISK

Thesis invalid on a close below $62.00 (base low / 50-day MA). Primary risk is California commercial real estate deterioration - office vacancy rates remain elevated and any high-profile loan defaults could reprice the stock sharply lower. 7.1 days-to-cover amplifies both upside and downside moves.

Clean VCP with RS line at new high and direct sector tailwind (Financials +6.6%). Exceptional growth metrics (26.6% EPS growth) for a regional bank with reasonable valuation. Elevated short interest creates squeeze potential. Strongest bear case: California CRE exposure is a binary risk that could invalidate the thesis suddenly on any loan loss headlines - this is the key disconfirming factor. No catalyst for 69 days keeps this at B-grade. Conviction: Medium.

Target: $47.00 (measured move from ~8% base depth; analyst target $44.27)

Stop: $38.50 (base low / 50-day MA support)

CATALYST INTELLIGENCE

EARNINGS

Reported Nov 3 - beat estimates with 23.5% revenue growth and 160% earnings growth as film slate recovered. Street estimates likely to rise post-results. Forward P/E of 15x is reasonable for a recovering cyclical with operational leverage.

BUSINESS & POSITION

Cinemark is the third-largest movie theater chain in North America and a leading exhibitor in Latin America, operating ~500 theaters. The company has a best-in-class balance sheet among exhibitors and benefits from a strong 2027 film slate after Hollywood strikes disrupted 2024 content flow.

FACTOR & THEME

Leveraged to film slate quality and consumer discretionary spending recovery. 2027 slate includes major sequels (Avatar 3, multiple Marvel/DC releases) creating visibility. Comms sector lagging (-1.3%) is a headwind but company-specific catalysts can override sector drag.

NEWS FLOW

Post-earnings consolidation after strong beat. Industry tailwind from improving film slate; competitor AMC's poor execution highlights Cinemark's operational superiority. No pending index events. Zero insider activity in last 60 days. 10.5% short interest with 4.1 DTC reflects residual skepticism on theatrical model - squeeze potential exists. (Catalyst: Post-earnings digestion / Med Impact)

INSTITUTIONAL

Volume dry-up is partial (not strict - W2 > W3) but RS line at new high and tight base (2.25) suggest accumulation. Elevated short interest (10.5%) combined with improving fundamentals creates squeeze setup. Best-in-class balance sheet among exhibitors reduces bankruptcy tail risk that plagues peers.

KEY RISK

Thesis invalid on a close below $38.50 (base low / 50-day MA). Primary risk is film slate disappointment - box office is highly dependent on tentpole performance, and a string of underperformers could reverse the recovery thesis. Comms sector weakness (-1.3%) is an additional headwind.

Tight base (2.25), RS line at new high, and recent blowout earnings create constructive setup. Elevated short interest (10.5%) offers squeeze potential as skeptics cover. Strongest bear case: theatrical exhibition remains a secularly challenged business and any film slate disappointment would be severely punished - streaming competition is structural. Vol dry-up is partial (not strict), and Comms sector lagging keeps this at B rather than A. Conviction: Medium.

CATALYST INTELLIGENCE

EARNINGS

December 01 - Street expects ~$0.43 EPS on ~$280M revenue. Company has beaten estimates consistently; 80% earnings growth reflects operating leverage as the model matures. 17.7% short interest is very elevated, creating binary earnings setup.

BUSINESS & POSITION

Box provides cloud content management and collaboration software for enterprises, enabling secure file sharing, workflow automation, and compliance. The company is pivoting toward AI-powered content intelligence (Box AI) to drive upsell and compete against Microsoft SharePoint and Google Drive.

FACTOR & THEME

Exposure to enterprise productivity and AI-enhanced workflow themes. Technology sector lagging (-8.4% 20d) is a significant headwind. Peer read-through: Dropbox weak but Box's enterprise focus and AI pivot differentiate. Sentiment on legacy SaaS names is tepid.

NEWS FLOW

Box AI product launch has driven some enterprise interest but adoption metrics unclear. No major contract wins announced recently. 17.7% short interest with 7.3 days to cover is the highest in the candidate set - squeeze potential is significant but requires a catalyst. Technology sector underperformance is the primary near-term risk. (Catalyst: Earnings / High Impact in 18 days)

INSTITUTIONAL

Volume dry-up confirmed (42% contraction) but RS line NOT at new high - a key divergence from textbook VCP. Very elevated short interest (17.7%, 7.3 DTC) creates explosive potential in either direction around earnings. Zero insider activity in last 60 days.

KEY RISK

Thesis invalid on a close below $41.00 (base low / 50-day MA). Primary risk is Technology sector underperformance (-8.4%) and elevated short interest reflecting legitimate concerns about competitive positioning vs. Microsoft. Binary earnings outcome with extreme short interest.

Tight base (3.2) with significant volume dry-up and highest short interest in the group (17.7%) creates asymmetric squeeze potential into earnings. However, RS line NOT at new high is a key negative divergence, and Technology sector lagging (-8.4%) creates substantial headwind. Strongest bear case: Microsoft's aggressive enterprise bundling could structurally impair Box's competitive position - the elevated short interest reflects this legitimate concern. High risk/reward but not A-grade due to RS divergence and sector drag. Conviction: Low-Medium.

CATALYST INTELLIGENCE

EARNINGS

REPORTED

Within 0.1% of pivot but RS line NOT at new high (only +2.7% vs SPY) and RS has been flat - no relative strength leadership. Healthcare sector leading (+7.5%) is supportive but individual stock RS must confirm. 12% short interest and -61% earnings growth are concerning. Monitor for RS improvement before promotion. Conviction: Low.
