ANALYSIS
CATALYST / TODAY'S DRIVER
Strong momentum into November 4 earnings with a history of volatile moves on diagnostics guidance updates. Forward catalyst is the Q3 print (49 days out) where MRD (minimal residual disease) product revenue trajectory and pharma partnership expansion will be scrutinized for commercial inflection proof.
BUSINESS & POSITION
Adaptive develops immune-driven medicine using proprietary immune sequencing technology to diagnose and treat diseases, with platforms spanning oncology MRD monitoring and drug discovery partnerships. The company is transitioning from pure research tools to clinical diagnostics revenue, competing in the fast-growing liquid biopsy and immune profiling markets.
FACTOR & THEME
Taps precision medicine and biotech tailwinds, specifically the shift from tissue biopsy to blood-based cancer monitoring (MRD). Theme momentum is accelerating as payers expand reimbursement for ctDNA assays and pharma demand for immune repertoire data in drug development grows.
BREAKOUT SIGNAL
Close above \$27.00 on vol >2.0x of 20d avg
INSTITUTIONAL
Volume surge at 2.09x on a Healthcare sector lagging day suggests targeted accumulation rather than broad sector lift. Institutional ownership data unavailable from this feed (recommend 13F cross-check), but the 60% 12-week outperformance signals smart money positioning ahead of potential commercialization milestones. No insider buying in last 60 days is neutral for a widely-held biotech at this stage.
EARNINGS
EARNINGS IN 49D
EARNINGS CONTEXT
Next print November 4. Consensus data not provided, but historical pattern shows high volatility on MRD product update quarters. Company has been transitioning from partnership revenue to direct clinical diagnostics sales; beat/miss cadence less relevant than forward guidance on MRD adoption trajectory.
KEY RISK
Thesis invalid on a close back below \$24.50 (the base pivot), or if November 4 guidance shows MRD revenue growth decelerating below 30% y/y, signaling reimbursement or competitive headwinds.
ANALYSIS
Exceptional 60% 12-week outperformance and 95% proximity to 52W high argue for institutional re-rating, but RS line NOT at new high downgrades from A-grade despite strong vol and setup quality. Strongest disconfirming evidence: base is wider than ideal (2.71 vs <2.0 textbook), float at 125M is large for a true momentum coil, and Healthcare sector is not leading this week. In a Mixed/Transitional regime with VIX elevated, this is a solid follow-through candidate but not a highest-conviction chase into earnings 7 weeks out. Conviction: Medium
Signal: Close above \$27.00 on vol >2.0x of 20d avg
Vol vs Avg: 2.09x

ANALYSIS
CATALYST / TODAY'S DRIVER
Steady grind higher on improving catastrophe pricing and reserve releases in a hardening P&C cycle. Forward catalyst is November 5 earnings where management will guide Q4 premium growth and combined ratio outlook into 2027 CAT season; any beat with improved loss ratios can extend the re-rating.
BUSINESS & POSITION
Palomar is a specialty insurer focused on catastrophe-exposed residential and commercial property (earthquake, wind, flood) in underserved markets, using technology-driven underwriting to achieve superior loss ratios. The company benefits structurally from climate-driven premium inflation and reinsurance market dislocation pushing business to well-capitalized specialists.
FACTOR & THEME
Exposed to the hardening P&C insurance cycle, particularly in CAT-exposed geographies where legacy carriers are retreating and rate adequacy is improving. Theme momentum is stable-to-accelerating as Florida/California continue to see rate increases and climate risk repricing drives premium growth across the sector.
BREAKOUT SIGNAL
Close above \$140.00 on vol >1.7x of 20d avg
INSTITUTIONAL
Volume at 1.8x is solid but not explosive; the 21% 12-week outperformance and 95% proximity to highs suggest steady institutional accumulation rather than a breakout surge. One insider buy (\$134k, non-senior) in last 60 days is modest positive but not a material conviction signal. Float at 25.6M is tight enough for follow-through if earnings deliver.
EARNINGS
EARNINGS IN 50D
EARNINGS CONTEXT
Next print November 5. Consensus not provided, but Palomar has historically beaten on top-line premium growth while combined ratio volatility (CAT losses) drives EPS variance. Last four quarters' beat/miss record unavailable, but the stock's 21% outperformance suggests the market is pricing in continued reserve development and pricing power.
KEY RISK
Thesis invalid on a close back below \$135.00 (the mid-base level), or if November 5 guidance shows combined ratio deterioration above 85% due to elevated CAT losses or adverse reserve development, signaling underwriting discipline breakdown.
ANALYSIS
Strong 21% RS and 95% proximity with a tight 25M float argue for quality, but RS line NOT at new high and base_tight at 2.37 (wider than ideal) prevent A-grade assignment. Strongest disconfirming evidence: Financial Services sector is NOT leading this week (lagging Comms/Energy/Tech), and in a Mixed regime elevated volatility can compress P&C multiples quickly on any reserve surprise. The setup is clean but lacks the explosive institutional confirmation of a true breakout. Conviction: Medium
Signal: Close above \$140.00 on vol >1.7x of 20d avg
Vol vs Avg: 1.8x
