ANALYSIS

Catalyst / Today's Driver

Post-earnings breakout to new 52W high following Q2 report (Aug 6). Forward catalyst: continued margin expansion narrative and Q3 print in ~90 days will test whether the guidance raise was conservative or fully discounted.

BUSINESS & POSITION

Avient manufactures specialty polymer materials, performance additives, and color/additive solutions for industries spanning healthcare, packaging, automotive, and electronics. The company has repositioned from commodity plastics to higher-margin specialty formulations, benefiting from reshoring and advanced materials demand.

FACTOR & THEME

Direct play on Materials sector leadership (+4.4% vs SPY this week). Exposure to reshoring, automotive lightweighting, and sustainable packaging trends. Chemicals margin recovery theme is accelerating as raw material costs normalize.

BREAKOUT SIGNAL

Close above \$45.65 on vol >2.08x of 20d avg

INSTITUTIONAL

Volume at 2.08x average on post-earnings gap, consistent with institutional repositioning after a likely beat-and-raise. Float of 91M allows block accumulation without spiking price. Institutional ownership data not available from this feed; recommend cross-referencing 13F filings.

EARNINGS

REPORTED

EARNINGS CONTEXT

Just reported Aug 6; earnings catalyst now in rear-view. Next print Nov 5. Post-earnings strength suggests a beat, but confirm consensus EPS/revenue and forward guide from the 8-K to assess whether margin expansion story has legs or is fully priced.

KEY RISK

Thesis invalid on a close back below \$42.50 (prior resistance), or if Q3 guidance disappoints. Chemicals are cyclical-any PMI rollover or demand softness kills the reflation narrative.

ANALYSIS

At 99.5% of 52W high with strong RS (+19.6) and Materials sector tailwind, this is a clean post-earnings breakout. The disconfirming evidence: base_tight at 7.15 is dangerously wide (well above the 2.0 VCP threshold), RS line is NOT at new high (critical Qullamaggie signal missing), and the earnings catalyst is now spent-forward path depends on Nov print 90 days away. The wide base and lack of RS line confirmation downgrade this from A to B despite proximity to highs. Conviction: Medium.

ANALYSIS
CATALYST / TODAY'S DRIVER
Volume surge (3.04x) on no headline news suggests smart-money accumulation ahead of a catalyst. Forward path: Q3 earnings Nov 5 and potential margin expansion narrative in infusion systems and consumables as hospital volumes normalize post-COVID disruptions.
BUSINESS & POSITION
ICU Medical designs and manufactures infusion therapy systems, IV solutions, and critical care disposables for hospitals and outpatient settings. The company acquired the Smiths Medical infusion business in 2017, creating a global leader in IV therapy with sticky, recurring consumables revenue.
FACTOR & THEME
Healthcare utilization recovery play-elective procedures and hospital admissions normalizing drive consumables demand. Small float (24.5M) amplifies volatility and enables rapid institutional accumulation. No direct GLP-1 or AI exposure, but med-tech margin recovery is a live theme.
BREAKOUT SIGNAL
Close above \$182.41 on vol >3.04x of 20d avg
INSTITUTIONAL
Volume at 3.04x on a +9.6% day with no news is classic institutional positioning. Small float and mid-cap size suggest this is under-owned by large growth funds relative to mega-cap med-tech peers. No insider buying in last 90 days, but cluster data unavailable beyond that window.
EARNINGS
EARNINGS IN 90D
EARNINGS CONTEXT
Next earnings Nov 5 (90 days out). Consensus and beat history not provided in dataset; verify EPS/revenue trajectory and whether ICU has a history of guiding conservatively. If this is a serial beater, the Nov print is a high-probability re-rating catalyst.
KEY RISK
Thesis invalid on a close back below \$170 (approximate breakout pivot), or on any hospital volume guidance cut at Nov earnings. Single-product concentration risk in infusion systems-competitive pressure from Baxter or BD could compress margins.
ANALYSIS
Exceptional RS at +39.2 (strongest in the scan), 96% of 52W high, and 3x volume on no news is textbook institutional accumulation. The bear case: base_tight at 4.06 is loose (above ideal 2.0), RS line NOT at new high (the #1 Qullamaggie confirmation signal is missing), and we're in a mega-cap-led regime where SMID healthcare faces headwinds. Despite strong technicals, the missing RS line new high and wide base keep this at B. Conviction: Medium.
Signal: Close above \$182.41 on vol >3.04x of 20d avg

ANALYSIS
CATALYST / TODAY'S DRIVER
Explosive +14.7% move on 1.83x volume to within 0.2% of 52W high suggests a catalyst-likely partnership news, contract win, or leaked positive data ahead of earnings. Forward path: Q3 earnings Nov 5 will reveal whether occupational health/urgent care volumes are inflecting higher.
BUSINESS & POSITION
Concentra operates employer-focused healthcare centers providing occupational medicine, urgent care, physical therapy, and wellness services across the U.S. The company serves a sticky corporate client base with long-term contracts, benefiting from labor force growth and workplace safety mandates.
FACTOR & THEME
Direct play on employment growth and return-to-work dynamics. As labor participation rises, demand for occupational health, drug testing, and onboarding physicals accelerates. No AI/tech exposure, but healthcare services margin expansion is a live 2026 theme.
BREAKOUT SIGNAL
Close above \$35.02 on vol >1.83x of 20d avg
INSTITUTIONAL
Volume only 1.83x on a +14.7% move is suspect-this may be retail FOMO or a thinly traded name gapping on low liquidity rather than institutional block buying. Float of 114M is adequate, but confirm whether this is real accumulation or a short squeeze. No insider buying in last 90 days.
EARNINGS
EARNINGS IN 90D
EARNINGS CONTEXT
Next earnings Nov 5 (90 days). Without consensus EPS/revenue or beat history in the dataset, cross-reference the 8-K filings. If Concentra has missed or guided conservatively in recent quarters, the Nov print is binary risk-not a tail-wind catalyst.
KEY RISK
Thesis invalid on a close back below \$31.50 (approximate gap-up pivot from today's open), or on any occupancy/volume guidance miss at Nov earnings. Single-theme concentration in occupational health-recession or labor market softness kills the thesis immediately.
ANALYSIS
Highest RS in the scan (+40.2) and 99.8% of 52W high is elite positioning. The disconfirming evidence: volume at only 1.83x is modest for a +14.7% move (suggests thin tape, not institutional conviction), base_tight at 4.61 is wide, and RS line is NOT at new high. The magnitude of the move on thin volume raises liquidity concerns-this may be a gap that fills rather than a sustainable breakout. The lack of RS line confirmation and wide base prevent an A grade despite proximity to highs. Conviction: Medium.

ANALYSIS
CATALYST / TODAY'S DRIVER
Volume breakout (1.93x) to 96% of 52W high likely on sector rotation into Consumer Discretionary (+3.6% vs SPY this week). Forward catalyst: Q3 earnings Nov 5 will test whether auto listing/lead volume is stabilizing as interest rates peak and used-car prices normalize.
BUSINESS & POSITION
CarGurus operates a leading automotive shopping marketplace connecting buyers and sellers of new and used vehicles. The platform generates revenue from dealer subscriptions and advertising, benefiting from digital shift in auto retail and transparency/trust features that drive dealer ROI.
FACTOR & THEME
Consumer Discretionary sector leadership (+3.6% vs SPY) provides tailwind. Exposure to auto affordability recovery as rates stabilize and inventory normalizes post-chip-shortage. Digital advertising spend recovery is a secondary theme if auto dealers increase marketing budgets.
BREAKOUT SIGNAL
Close above \$39.62 on vol >1.93x of 20d avg
INSTITUTIONAL
Volume at 1.93x on +8.9% suggests moderate accumulation, consistent with sector rotation rather than name-specific catalyst. Float of 73.5M is liquid enough for institutional flow. No insider buying in last 90 days-management conviction is absent.
EARNINGS
EARNINGS IN 90D
EARNINGS CONTEXT
Next earnings Nov 5 (90 days). Consensus and beat history not in dataset; verify whether CarGurus has a history of beating on dealer subscription growth or missing on take-rate compression. Auto marketplace multiples are highly sensitive to lead volume trends.
KEY RISK
Thesis invalid on a close back below \$37.00 (approximate breakout pivot), or on any dealer subscription or monetization guidance cut at Nov earnings. CarGurus is cyclically exposed-any consumer spending rollover or auto loan stress kills the thesis.
ANALYSIS
At 96.1% of 52W high with Consumer Disc sector tailwind, this is a clean sector-rotation play. The bear case: RS at +8.9 is only modestly positive (well below the +10 threshold for A-grade leadership), base_tight at 3.32 is wider than ideal, and RS line is NOT at new high. Volume at 1.93x is solid but not explosive. This is a follow-the-sector trade, not a high-conviction single-name alpha opportunity. Conviction: Medium.
Signal: Close above \$39.62 on vol >1.93x of 20d avg

ANALYSIS

CATALYST / TODAY'S DRIVER

Breakout to 95.6% of 52W high on sector strength (Materials +4.4%, Industrials benefiting from commodity reflation). Forward catalyst: Q3 earnings Nov 4 will reveal whether oil & gas CAPEX and maintenance spending is accelerating into 2027.

BUSINESS & POSITION

DNOW distributes energy and industrial products-pipes, valves, fittings, MRO supplies-primarily to oil & gas upstream, midstream, and downstream operators. The company is a flow-through play on energy CAPEX cycles, with margins tied to drilling activity and production maintenance demand.

FACTOR & THEME

Energy CAPEX recovery and commodity reflation are the core drivers. As oil stabilizes and operators shift from dividends-only to modest growth CAPEX, distributors like DNOW benefit from volume and pricing leverage. Exposure to reshoring industrials is secondary.

BREAKOUT SIGNAL

Close above \$16.50 on vol >1.51x of 20d avg

INSTITUTIONAL

Volume at only 1.51x on a +7.2% move is the weakest volume ratio among B-grade candidates-suggests this is driven by sector beta rather than name-specific institutional conviction. Large float (177.8M) diffuses buying pressure. No insider activity.

EARNINGS

EARNINGS IN 89D

EARNINGS CONTEXT

Next earnings Nov 4 (89 days). Without EPS consensus or beat history, verify whether DNOW has surprised positively on margin expansion or disappointed on inventory destocking. Energy distribution multiples are highly cyclical.

KEY RISK

Thesis invalid on a close back below \$15.00 (approximate support), or on any oil CAPEX guidance cut at Nov earnings. DNOW is a pure energy play-any WTI weakness below \$70 or drilling rig count decline kills the thesis immediately.

ANALYSIS

Strong RS at +21.1 and 95.6% of 52W high position this well technically. The disconfirming evidence: volume at only 1.51x is the minimum threshold for inclusion (barely above the 1.5x filter), base_tight at 6.9 is extremely wide (no coil/VCP structure), and RS line is NOT at new high. This is a sector-driven move in a cyclical name with no setup quality-more likely a beta trade than an alpha breakout. Conviction: Low.

Signal: Close above \$16.50 on vol >1.51x of 20d avg

Vol vs Avg: 1.51x

ANALYSIS

CATALYST / TODAY'S DRIVER

Flat on the day but 1.63x volume at 95.7% of 52W high suggests quiet accumulation (volume with no price change = absorption). Forward catalyst: Q3 earnings Nov 5 will test whether industrial MRO demand is inflecting higher as manufacturing activity stabilizes.

BUSINESS & POSITION

DXP Enterprises distributes maintenance, repair, and operating (MRO) supplies and provides integrated supply chain services to industrial, energy, and manufacturing customers. The company benefits from sticky customer relationships and recurring consumables revenue in cyclical end-markets.

FACTOR & THEME

Industrials and energy MRO spending recovery as CAPEX cycles turn. Small float (12.8M) creates high volatility and squeeze potential. Exposure to reshoring and domestic manufacturing buildout is a secondary tailwind.

BREAKOUT SIGNAL

Close above \$198.21 on vol >1.63x of 20d avg

INSTITUTIONAL

Volume at 1.63x with 0% price change is absorption-institutions buying supply without moving price, a classic accumulation signal. Tiny float of 12.8M means even modest institutional flow creates volatility. No insider buying in last 90 days.

EARNINGS

EARNINGS IN 90D

EARNINGS CONTEXT

Next earnings Nov 5 (90 days). Consensus and beat history not in dataset; verify whether DXP has a track record of margin beats or revenue misses. Industrial distribution multiples are sensitive to MRO volume trends and supply chain efficiency gains.

KEY RISK

Thesis invalid on a close back below \$185 (approximate support), or on any MRO volume or margin guidance cut at Nov earnings. DXP is cyclically exposed-any industrial recession or energy CAPEX pullback kills the thesis.

ANALYSIS

RS at +21.8 and 95.7% of 52W high with absorption volume (1.63x volume, 0% price change) is a high-quality institutional accumulation pattern. The bear case: base_tight at 5.68 is wide, RS line is NOT at new high, and float at 12.8M creates illiquidity risk (spreads widen on any sell pressure). The absorption signal is compelling, but the lack of RS line confirmation and wide base prevent an A grade. Conviction: Medium.

Signal: Close above \$198.21 on vol >1.63x of 20d avg

Vol vs Avg: 1.63x
