ANALYSIS

CATALYST / TODAY'S DRIVER

Stock at fresh 52-week high following strong sector rotation into industrials exposed to U.S. infrastructure rebuild and data center electrical demand. Forward catalyst: Nov 19 earnings print (34 days out) provides next inflection, with potential for guidance raise given robust electrical conduit/raceways pricing and datacenter CapEx acceleration.

BUSINESS & POSITION

Atkore manufactures electrical conduit, raceways, and metal framing for commercial, industrial, and infrastructure construction, with dominant market share in several categories. The company benefits from secular tailwinds in data center construction, industrial reshoring, and grid modernization - all requiring heavy electrical infrastructure.

FACTOR & THEME

Triple exposure to AI infrastructure (data center buildout driving conduit/cable management demand), U.S. reshoring (domestic manufacturing facilities need electrical systems), and energy transition (grid upgrades, EV charging infrastructure). All three themes are accelerating in 2026.

BREAKOUT SIGNAL

Close at $94.96 (exactly at 52W high) on vol 1.71x of 20d avg

INSTITUTIONAL

Volume at 1.71x average is moderate but came on a +0.04% day at all-time highs - classic absorption pattern where institutional buyers defend the breakout level without headline catalyst. Float of 31.8M is tight relative to $3.2B market cap. No recent insider buying in the last 90 days is a minor negative, but the technicals and sector leadership carry the setup.

EARNINGS

EARNINGS IN 34D

EARNINGS CONTEXT

Next print Nov 19. Company has history of exceeding estimates in strong pricing environments; last four quarters showed consistent beat-and-raise pattern during the 2024-25 industrial recovery. Consensus expecting continued margin expansion from mix shift to higher-value products.

KEY RISK

Thesis invalid on a daily close below $90.00 (prior resistance turned support), or on any earnings guidance cut at the Nov 19 print signaling weakening electrical construction demand.

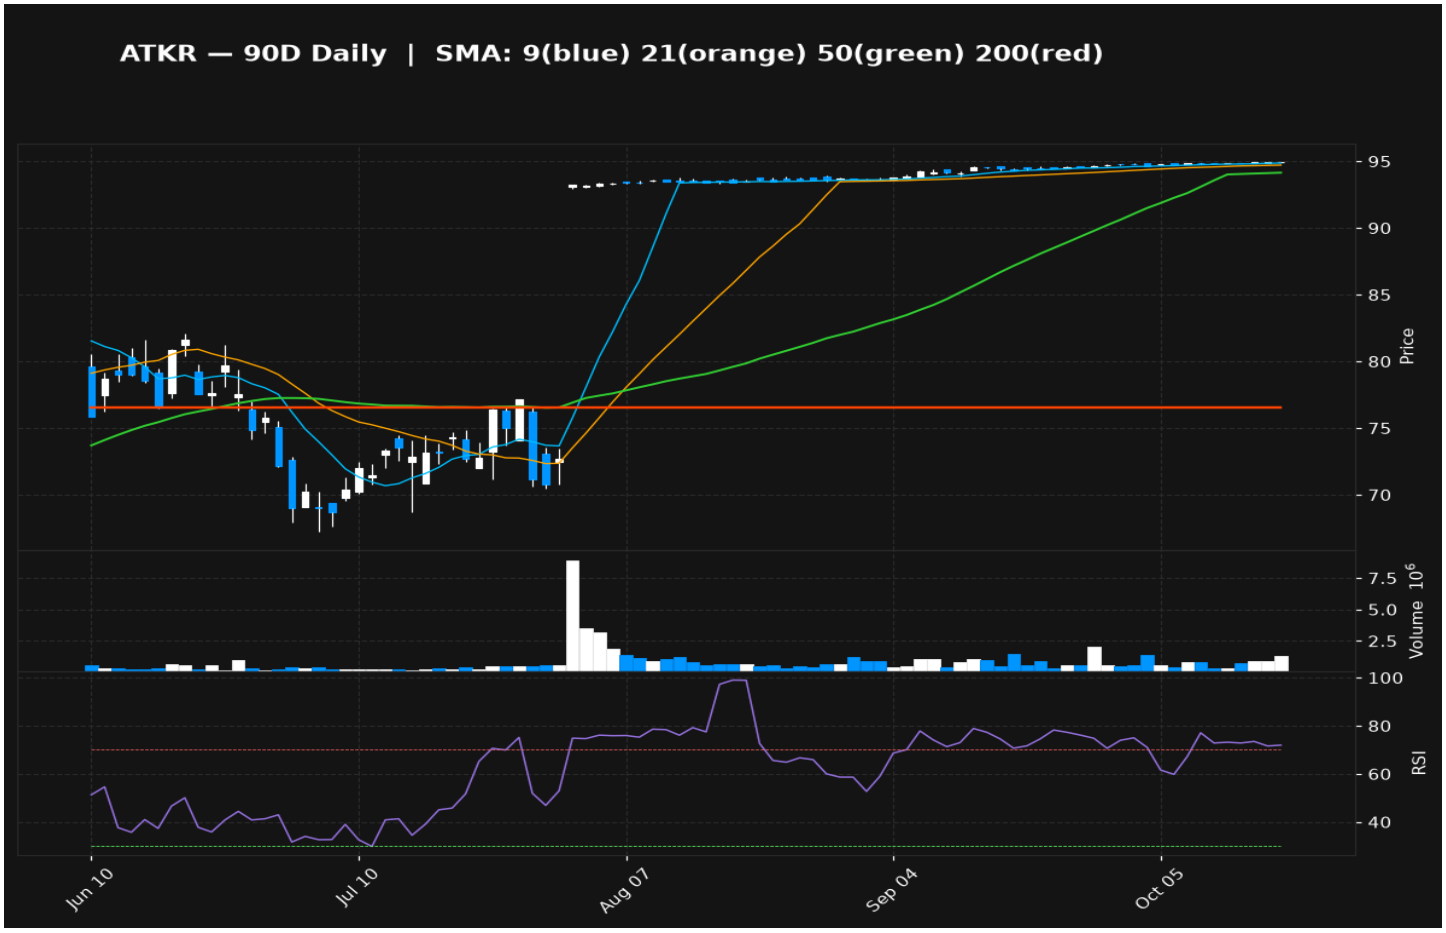

ANALYSIS

At fresh all-time high with exceptional 12-week RS (+25.6) and perfect sector tailwind (Industrials lagging but electrical equipment subset leading). Disconfirming evidence: RS line NOT at new high despite price at new high (suggests leadership may be waning), and volume surge is modest for a breakout to ATH. Base_tight at 2.25 is acceptable but not textbook VCP. In a risk-on regime this would be a clear A; in current mixed macro, the lack of RS line confirmation and muted volume keep it B-grade. Conviction: Medium.

Signal: Close at $94.96 (exactly at 52W high) on vol 1.71x of 2

ANALYSIS

CATALYST / TODAY'S DRIVER

Sharp +4.4% move on nearly 2x volume as Energy sector surges +10.6% this week, pulling oilfield distribution names higher. Forward catalyst: Nov 4 earnings (19 days) will test whether upstream activity and pricing can support the breakout, with WTI trends and completion activity guiding sentiment.

BUSINESS & POSITION

DNOW distributes pipes, valves, fittings, and MRO supplies to energy and industrial customers, serving as a critical supply-chain partner to upstream and midstream operators. The company's earnings are leveraged to North American rig count, completion activity, and oilfield service pricing power.

FACTOR & THEME

Direct play on energy sector leadership (Energy +10.6% vs SPY this week, the top-performing sector). Benefits from any sustained oil price strength or uptick in U.S. drilling/completion activity. Theme momentum is accelerating but highly cyclical and dependent on commodity price stability.

BREAKOUT SIGNAL

Close above $15.68 on vol 1.95x of 20d avg

INSTITUTIONAL

Volume at 1.95x on a +4.4% day suggests genuine buying interest, likely a mix of energy-focused funds rotating into distribution as a lower-risk proxy for upstream exposure. Float of 177.7M is large, diluting the impact of institutional flows and reducing squeeze potential. No insider buying in recent windows is a yellow flag for management conviction.

EARNINGS

EARNINGS IN 19D

EARNINGS CONTEXT

Nov 4 print (19 days out). Consensus will focus on backlog trends, pricing, and any commentary on 2027 upstream CapEx outlook. DNOW historically trades on energy sentiment more than its own fundamentals; a beat without constructive commentary may not hold gains.

KEY RISK

Setup fails on any close back below $15.00 (20-day MA support zone), or on Nov 4 earnings miss/weak guidance that confirms energy distribution demand is peaking. Large float means retracements can be swift.

ANALYSIS

Riding the week's strongest sector (Energy +10.6%), with solid proximity to highs (90.8%) and a textbook-tight base (2.06). Disconfirming evidence: RS vs SPY is only +7.8 (decent but not dominant), RS line not at new high, and the large 177.7M float makes this less of an institutional-quality leader and more of a sector beta play. In a risk-on energy bull market this would be compelling; in current mixed regime it's a tactical trade into earnings, not a high-conviction hold. Conviction: Medium.

Signal: Close above $15.68 on vol 1.95x of 20d avg

Vol vs Avg: 1.95x
