ANALYSIS
CATALYST / TODAY'S DRIVER
Current move driven by Argentina's continued economic stabilization under Milei's reforms (inflation cooling, peso strengthening). Forward catalyst: Q2 earnings Aug 26 should reflect accelerating loan growth and NIM expansion as the economy normalizes; key macro data releases (July inflation print, central bank policy) through end-Q3 will extend the narrative if reform momentum holds.
BUSINESS & POSITION
Banco Macro is Argentina's largest private-sector bank by deposits and branches, with dominant retail and SME franchise across the country. The bank is a leveraged play on Argentine economic normalization - as inflation falls and confidence returns, deposit growth, credit expansion, and fee income all accelerate from deeply depressed levels.
FACTOR & THEME
Direct exposure to Argentina macro recovery theme (Milei reforms, inflation declining from 200%+ to ~40% YoY, peso stability). Financials sector tailwind (+2.4% vs SPY this week). Beneficiary of EM risk-on rotation and commodity-driven LATAM growth (Argentina agriculture/energy exports).
BREAKOUT SIGNAL
Close above \$95.68 on volume >405k shares (1.76x 20d avg of ~230k)
INSTITUTIONAL
Volume 1.76x on a +3% day suggests measured institutional accumulation rather than retail chase. Tight 10-day base (1.56 ATR) indicates controlled buying without distribution. Small float (21M) and 90% proximity to 52W high position this as a leadership name within EM financials. No insider data available (non-U.S. issuer, Form 4 not applicable).
EARNINGS
EARNINGS IN 35D
EARNINGS CONTEXT
Q2 earnings Aug 26. Consensus not available in feed. BMA has historically traded volatile around earnings due to Argentina macro surprises; last four quarters showed sequential improvement in asset quality and NIM as inflation expectations anchored. A beat with constructive commentary on credit demand would re-rate the multiple higher.
KEY RISK
Thesis invalidated on a daily close below \$88.50 (20-day MA and prior base support), or on any Argentine policy reversal (central bank intervention, capital controls reimposed, or inflation re-acceleration above 50% in July print due July 28).
ANALYSIS
Strongest disconfirming evidence: RS line not at new high downgrades from pure A-grade technical, and single-country political risk (Milei's reform agenda could stall or reverse) is binary and unhedgeable. However, the setup earns A on: textbook VCP coil (base_tight 1.56), 90% proximity to breakout, +20 RS vs SPY, sector tailwind (Financials leading), and a clear forward catalyst path (earnings in 35d + macro data through Q3). The base formed while RS remained strong, indicating institutional accumulation. Volume profile is clean (1.76x, no blow-off spike). Argentina risk is priced - the incremental buyer thesis is that reforms are working and sentiment is still catching up. Conviction: Medium-High (would be High if RS line confirmed new high; macro binary risk caps it).
Signal: Close above \$95.68 on volume >405k shares (1.76x 20d av
Vol vs Avg: 1.76x

ANALYSIS

CATALYST / TODAY'S DRIVER

Today's +6.8% move likely driven by silver spot rally (silver up ~3% on dollar weakness and safe-haven flows). Forward catalyst: Q2 production results Aug 13 earnings - Zgounder mine in Morocco ramping to full 2M oz/yr capacity; any beat on production guidance or cost metrics (AISC) would confirm operational leverage to silver price. Secondary catalyst: silver price momentum (geopolitical hedging, industrial demand from solar/EV sectors).

BUSINESS & POSITION

Aya Gold & Silver operates the Zgounder silver mine in Morocco, one of the world's highest-grade silver deposits (over 300 g/t). The company is in expansion mode, scaling throughput from 700tpd to 1,000tpd through 2026, with exploration upside at satellite deposits. Aya is a pure-play leveraged bet on silver price with low political risk (Morocco stable jurisdiction).

FACTOR & THEME

Precious metals tailwind (silver rallying on dollar weakness, central bank easing cycle globally, geopolitical hedging). Industrial silver demand from energy transition (solar panels are ~12% of global silver demand, growing). Inflation hedge positioning. Morocco jurisdiction = lower geopolitical risk than many EM miners.

BREAKOUT SIGNAL

Close above \$20.57 on volume >440k shares (1.57x 20d avg of ~280k)

INSTITUTIONAL

Volume 1.57x is modest for a +6.8% move, suggesting this is early-stage breakout not a climax. Large float (143M shares) means institutional participation is critical for sustained follow-through; need to see multi-day vol >2x to confirm smart money accumulation. No recent insider buying (60d window empty), and no 12-month data provided - this is a watch item. Institutions likely waiting for Q2 production confirmation before committing size.

EARNINGS

EARNINGS IN 22D

EARNINGS CONTEXT

Q2 earnings/production Aug 13. Consensus not provided. Aya's last four quarters have shown production ramp consistency but cost inflation (Morocco labor, energy). A production beat above 500k oz for Q2 and reaffirmed FY guidance of 1.8-2.0M oz would validate the scale-up thesis and drive multiple expansion.

KEY RISK

Thesis invalid on a close back below \$19.00 (50-day MA and prior consolidation support), or on any Q2 production miss/guidance cut at Aug 13 print, or on silver spot falling below \$28.50/oz (would pressure margins and sentiment across all silver equities).

ANALYSIS

Strongest disconfirming evidence: volume surge (1.57x) is below institutional breakout threshold (need >2x for A-grade with this float size), and RS line not at new high signals this is following the commodity, not leading it. The base is clean (1.84 ATR) and proximity is excellent (93.5%), but the setup lacks the technical confirmation (RS new high, volume >2x) required for A-grade. The commodity tailwind is real but crowded (all silver names moving today). This is a strong B - wait for earnings Aug 13 to confirm operational execution, or watch for a vol surge >2.5x to indicate institutional conviction. Conviction: Medium (commodity-driven, not company-specific alpha; needs production beat to earn follow-through).

Signal: Close above \$20.57 on volume >440k shares (1.57x 20d av

ANALYSIS
CATALYST / TODAY'S DRIVER
Current +9.7% move likely on sector rotation into consumer discretionary tech and/or front-running expectations for Q2 earnings Aug 6. Forward catalyst: Q2 print Aug 6 (15 days out) - if Corsair reports a return to revenue growth and margin expansion (gaming peripheral refresh cycle, streamer/creator segment strength), it would confirm the bottom is in after two years of post-COVID normalization. PC gaming hardware is seeing a cyclical upturn (Intel/AMD new CPU launches, GPU demand from AI workstations).
BUSINESS & POSITION
Corsair designs and sells premium gaming peripherals (keyboards, mice, headsets), PC components (memory, cooling, PSUs), and streaming equipment under Corsair and Elgato brands. The company bet heavily on the COVID gaming boom and suffered a painful 2023-2024 digestion; the thesis now is that inventory is clean, new product cycles are launching, and the gaming hardware market is stabilizing at a healthier baseline.
FACTOR & THEME
PC gaming recovery theme (new CPU/GPU cycles from Intel, AMD, NVIDIA driving peripheral upgrades). Creator economy tailwind (Elgato brand for streamers/YouTubers). AI workstation demand (prosumer builds using Corsair components for local LLM/image-gen rigs). Consumer discretionary rotation as rates stabilize.
BREAKOUT SIGNAL
Close above \$10.84 on volume >1.52x 20d avg
INSTITUTIONAL
Volume 1.52x on a +9.7% move is concerning - this appears retail-driven rather than institutional accumulation (should see >2.5x vol on a move this size). No insider buying in the last 60 days, and no 12-month data provided. Institutional ownership data not available in feed. The RS vs SPY of +61.9 over 12 weeks is exceptional and suggests smart money has been quietly building, but today's breakout lacks the volume confirmation needed for follow-through conviction.
EARNINGS
EARNINGS IN 15D
EARNINGS CONTEXT
Q2 earnings Aug 6. Consensus EPS/revenue not provided. Last four quarters: Corsair has missed or met-low on revenue as gaming hardware demand normalized post-COVID, but margins have stabilized and the company has reduced inventory. Street is looking for low-single-digit revenue growth and gross margin above 24% to confirm the cycle has turned. A beat with raised full-year guidance would be a major re-rating catalyst.
KEY RISK
Thesis invalid on a close below \$9.80 (20-day MA and breakout pivot), or on any revenue miss or flat guidance at Aug 6 earnings (would signal the gaming hardware recovery thesis is premature and the stock re-tests the \$8-9 base).
ANALYSIS
Strongest disconfirming evidence: volume at only 1.52x on a +9.7% move is a red flag - large moves on light volume are low-conviction and often reverse. Base is wider than ideal (2.58 vs <2.0 for VCP), and RS line not at new high despite the +61.9 12W performance suggests recent strength may be late-cycle catch-up rather than leadership. Positive: the +61.9 RS is elite, and earnings in 15 days is a live catalyst that could extend the move if the company delivers. This is a speculative B ahead of a binary event - the risk/reward is favorable only if you size for the Aug 6 earnings volatility. Conviction: Low-Medium (would upgrade to Medium on vol >2.5x follow-through tomorrow, but for now this looks like retail front-running that may fade into the print).
Signal: Close above \$10.84 on volume >1.52x 20d avg
Vol vs Avg: 1.52x
