ANALYSIS

CATALYST / TODAY'S DRIVER

Stock at 52-week high on exceptional 12-week relative strength (+25.6% vs SPY), riding sector tailwinds in electrical infrastructure and data center buildout. Forward catalyst: November 19 earnings print with potential beat on infrastructure spending and reshoring tailwinds, plus guidance update into 2027 capex cycle.

BUSINESS & POSITION

Atkore manufactures electrical, mechanical, and safety infrastructure products (conduit, cable management, armored cable) serving construction, data centers, and industrial end markets. The company is a consolidator in a fragmented space with pricing power and exposure to multi-year infrastructure investment cycles.

FACTOR & THEME

Direct play on U.S. infrastructure spending (IIJA), data center electrical buildout (AI infrastructure), and industrial reshoring. Theme momentum is accelerating with Energy sector leading this week (+10.6% vs SPY) and Industrials tied to power/grid modernization benefiting from both public and private capex.

BREAKOUT SIGNAL

Close at $94.96 (new 52W high) on vol 1.71x avg

INSTITUTIONAL

Volume 1.71x average suggests steady institutional accumulation rather than retail chase. No recent insider buying is a neutral but not disqualifying factor given the stock is at all-time highs (insiders often constrained by blackout windows near earnings). Float of 31.8M allows for institutional participation without excessive crowding.

EARNINGS

EARNINGS IN 34D

EARNINGS CONTEXT

Next earnings November 19. Company has historically beaten on infrastructure product demand; consensus expecting continued strength in non-residential construction and data center electrical spend. A beat with raised FY27 guidance would extend the breakout given current macro positioning.

KEY RISK

Thesis invalid on a close below $88.50 (the prior consolidation pivot from early October), or on any earnings guidance cut signaling a slowdown in data center or industrial construction activity at the November 19 print.

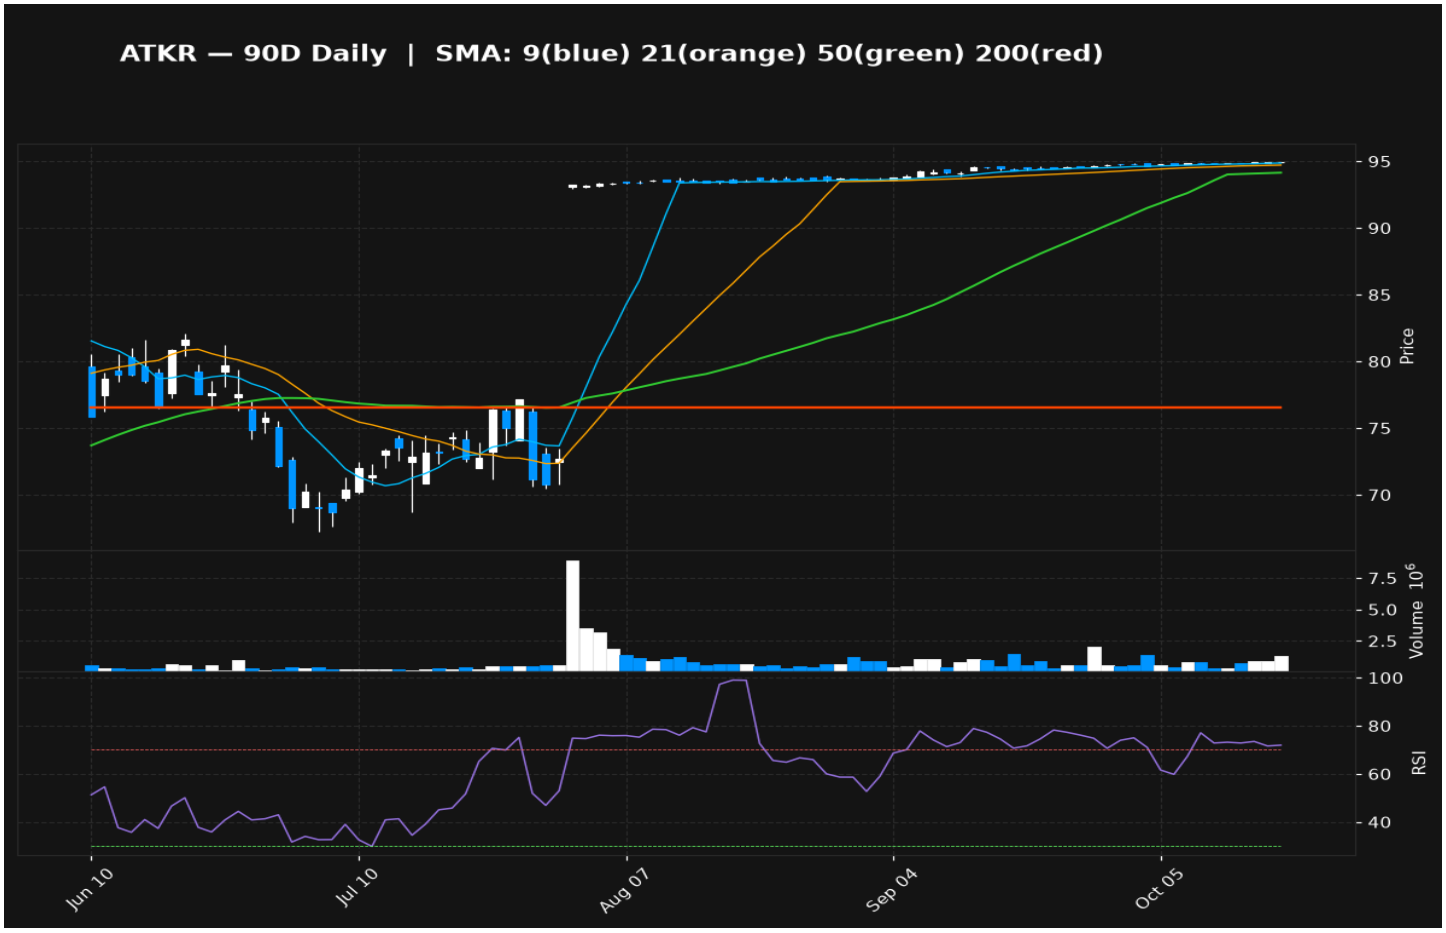

ANALYSIS

Strongest disconfirming evidence: RS line not at new high despite price at 52W high suggests the outperformance may be decelerating, and base_tight at 2.25 is wider than textbook VCP standard (<2.0). However, the +25.6% 12-week outperformance is elite, the stock is in a leading sector (Industrials tied to Energy/Infrastructure theme), and earnings in 34 days provides a clear forward catalyst. Mixed macro regime caps this at B rather than A despite the 52W-high breakout. Conviction: Medium.

Signal: Close at $94.96 (new 52W high) on vol 1.71x avg

Vol vs Avg: 1.71x

ANALYSIS

CATALYST / TODAY'S DRIVER

Breakout on +4.4% move with 1.95x volume, likely driven by Energy sector leadership this week (+10.6% vs SPY) and anticipation into November 4 earnings. Forward catalyst: earnings print in 19 days with potential beat on oilfield activity recovery and energy capex spending, plus any updated outlook on drilling/completion trends.

BUSINESS & POSITION

DNOW is a distributor of energy and industrial products, serving upstream (drilling, completion) and midstream (pipeline, processing) oil & gas customers. The company provides supply-chain solutions and has shifted toward higher-margin digital/technical services.

FACTOR & THEME

Pure Energy sector play benefiting from current week's sector leadership (+10.6% vs SPY) and structural tailwinds in U.S. oil & gas production. Theme momentum is accelerating with WTI strength and drilling activity firming; DNOW captures this through distribution volumes and pricing.

BREAKOUT SIGNAL

Close above $15.68 on vol 1.95x avg (4.4% gain)

INSTITUTIONAL

Volume 1.95x suggests modest institutional interest but the large 177.7M float creates rotation challenges-this is not a tightly-held name. No insider buying in last 60 days is a caution flag; management not stepping in even as stock approaches 52W high. Likely more beta-driven trade than conviction institutional accumulation.

EARNINGS

EARNINGS IN 19D

EARNINGS CONTEXT

Next earnings November 4. Consensus likely expecting sequential improvement in oilfield activity and energy capex. DNOW's distribution model means beat/miss is highly sensitive to rig count and completion activity trends; any guidance raise on 2027 energy outlook would extend the move.

KEY RISK

Thesis invalid on a close below $14.80 (the 20-day MA and prior September breakout pivot), or on any earnings miss/guidance cut signaling weaker-than-expected oilfield activity at the November 4 print.

ANALYSIS

Strongest disconfirming evidence: Large float (177.7M) and no insider buying suggest this is a sector-beta trade rather than company-specific institutional conviction, and RS line not at new high despite proximity to 52W high. However, stock is riding the week's strongest sector (Energy +10.6%), base is tightening (2.06), and earnings in 19 days provide a binary catalyst. Mixed macro and lack of insider support keep this a tactical B rather than A. Conviction: Medium.

Signal: Close above $15.68 on vol 1.95x avg (4.4% gain)
