| CATALYST / TODAY'S DRIVER                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| Breaking out on energy/commodities vol surge and volatility expansion - a classic setup for a global commodity broker. Forward catalyst: Nov 5 earnings print (63 days out) will capture this quarter's energy rally tailwinds; multiple analyst initiations likely post-IPO lockup expiry (typically 180 days from IPO, which appears to be behind us given the price action from the \$27.91 52-week low).                                                                                                                                       |
| BUSINESS & POSITION                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| Marex is a global commodities broker and financial intermediary servicing institutional clients across energy, metals, agriculture, and financial markets - providing execution, clearing, hedging, and market-making services. The company benefits directly from commodity price volatility and trading volume, making it a levered play on the current energy sector breakout (+12.4% vs SPY this week).                                                                                                                                        |
| FACTOR & THEME                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| Direct energy volatility proxy and commodities infrastructure play. With Energy leading all sectors at +12.4% relative, MRX captures the trading volume and margin expansion that comes with heightened commodity volatility. This is a secular tailwind as geopolitical tension, energy transition complexity, and supply-chain fragmentation drive sustained trading activity in physical and derivative markets.                                                                                                                                |
| BREAKOUT SIGNAL                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| Close above \$75.00 on vol >2.7x of 20d avg                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| INSTITUTIONAL                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| Volume 2.72x average on a +5.55% move signals institutional participation, not retail chase. The stock is at a textbook VCP coil (base_tight 1.5) and within 0.1% of 52-week highs, suggesting quiet accumulation into a breakout. Float of 66M is manageable for growth funds. No insider buying in last 60 days, but for a post-IPO name, the stock action itself is the tell - institutions are building as the commodity cycle thesis plays out.                                                                                               |
| EARNINGS                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| EARNINGS IN 63D                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| EARNINGS CONTEXT                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| Next earnings Nov 5, 2026. No beat/miss history available (recent IPO or limited yfinance coverage). Consensus expectations not available from this feed; cross-reference with Bloomberg for EPS/revenue. As a broker, earnings will reflect Q3 volatility and energy market activity - a tailwind given current sector leadership.                                                                                                                                                                                                                |
| KEY RISK                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| Thesis invalid on a close back below \$70.00 (the apparent pivot/base breakout level), or on any energy sector reversal that compresses commodity volatility and trading volumes. A single-sector exposure (commodities) makes this vulnerable to regime change if Energy leadership fades.                                                                                                                                                                                                                                                        |
| ANALYSIS                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| Five technical criteria met: vol >2x (2.72x), prox_52w >85 (99.9), rs_vs_spy >+10 (+32.5), base_tight <2.0 (1.5), and a clear sector-leadership catalyst. The RS line is NOT at new high, which is the single strongest disconfirming evidence and would typically downgrade this - but the combination of a textbook coil, massive relative strength, breakout proximity, and the commodity volatility tailwind earns the A. In a risk-on regime this would be a slam-dunk; in mixed/transitional, temper position size. Conviction: Medium-High. |
| Signal: Close above \$75.00 on vol >2.7x of 20d avg                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| Vol vs Avg: 2.72x                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

ANALYSIS

CATALYST / TODAY'S DRIVER

Insider cluster signal: 6 insiders deployed \$8.3M in last 60 days - top-tier conviction from board/management at a depressed valuation (stock 42% below 52-week high). Forward catalyst: Oct 27 earnings (54 days) will test whether auto retail stabilization thesis is real; any guidance raise or margin improvement commentary could re-rate the stock sharply given current skepticism.

BUSINESS & POSITION

Group 1 is one of the largest automotive retailers in the U.S. and U.K., operating ~200 dealerships selling new/used vehicles, parts, and service. The company is levered to consumer spending, interest rates, and OEM inventory availability - all of which have been headwinds but may be inflecting as rates stabilize and inventory normalizes.

FACTOR & THEME

Consumer cyclical recovery play, specifically auto retail normalization. The sector has been out of favor due to high rates and affordability concerns, but stabilization in financing costs and pent-up demand for vehicle replacement (aging U.S. fleet) could drive a sentiment shift. Not a secular growth story, but a cyclical mean-reversion candidate if the consumer holds up.

BREAKOUT SIGNAL

Close above \$284.00 on vol >1.8x of 20d avg

INSTITUTIONAL

**\*\*INSIDER CLUSTER DETECTED:** 6 distinct insiders bought \$8.3M in last 60 days (insider\_cluster=7).\*\* This is the strongest single alpha signal in the data set. Volume 1.89x on a +2.87% day suggests follow-through, not distribution. The float is tiny (10.3M), so any incremental institutional interest post-earnings could drive sharp moves. Institutional ownership data not available from this feed; cross-reference 13F filings.

EARNINGS

EARNINGS IN 54D

EARNINGS CONTEXT

Next earnings Oct 27, 2026. Consensus EPS/revenue not available from this feed. Historical beat/miss pattern unknown. As an auto retailer, key metrics will be same-store sales, gross profit per vehicle (new/used), and finance/insurance penetration. Any margin expansion or inventory commentary will be scrutinized given the depressed valuation.

KEY RISK

Thesis invalid on a close back below \$270.00 (approximate recent support), or on any Oct 27 earnings miss/guidance cut that confirms the consumer cyclical bear case. The stock is down 42% from highs and RS is deeply negative (-13.5 vs SPY), so this is a contrarian/turnaround bet, not a momentum leader. If insiders are wrong, downside is real.

ANALYSIS

**\*\*GRADE UPGRADE APPLIED:** C B due to insider\_cluster=7 in a mixed macro.\*\* Base case was C (negative RS, wide base\_tight 3.07, stock below 50MA, far from highs). But 6 insiders buying \$8.3M is institutional-quality conviction that overrides the weak technicals. This is NOT a momentum breakout - it's a contrarian/value setup with insider validation. The single strongest disconfirming evidence is the deeply negative RS and distance from highs, which signals the market does not believe the turnaround yet. Conviction: Medium (high on insider signal, low on technical setup; net Medium).

Signal: Close above \$284.00 on vol >1.8x of 20d avg
