Close above \$200.10 on volume >150% of 20-day avg (>180k shares)
Target: \$218 (9% measured move from pivot using prior base depth)
Stop: \$189 (close below 50-day MA and base low)

CATALYST INTELLIGENCE
EARNINGS
Aug 6 - Next print 79 days out - too distant to be a near-term catalyst. TTM EPS \$7.87 with revenue growth +2.2% and earnings growth +9.7% suggests steady margin expansion as labor pressure eases; the setup is driven by tape action ahead of fundamentals.
BUSINESS & POSITION
National HealthCare Corporation operates skilled nursing facilities, assisted living centers, and homecare/hospice services primarily across the southeastern U.S. It is one of the longest-tenured publicly traded post-acute care operators with a conservative, family-controlled capital structure.
FACTOR & THEME
Taps the demographic super-cycle of aging boomers driving SNF occupancy recovery alongside the 2026 CMS rate update tailwind. Defensive healthcare beneficiary in a transitional regime where staples/healthcare leadership is rotating in.
NEWS FLOW
No major company-specific catalyst in the last 30-60 days; the move is sector-driven on senior care reimbursement clarity and post-acute occupancy strength. Catalyst type: Industry / Impact: Medium. RS line at new 52W high signals quiet institutional sponsorship absent loud news flow.
INSTITUTIONAL
Volume contraction from 124k108k85k weekly is genuine accumulation behavior on a thin 12.6M float - RS line at new high without a news catalyst is textbook quiet sponsorship. Insider activity zero in last 60d (baseline); institutional ownership data unavailable from this feed.
KEY RISK
Thesis invalid on a close below the \$189 base low, or on adverse CMS rate guidance; ultra-thin 120k ADV creates slippage risk if institutions exit.

RS line at new high with clean stair-step volume dry-up on a tiny float is a high-quality coil, but base_tight 4.48 is loose for A-grade and the next earnings catalyst is 79 days out - strongest bear case is that without a proximate catalyst the breakout could be a low-volume drift that fails on the first supply test. Conviction: Medium.

Target: \$240 (10% measured move; analyst PT \$222.86 is conservative)
Stop: \$208 (50-day MA and base midpoint)

CATALYST INTELLIGENCE
EARNINGS
Aug 4 - Print 77 days out - too far to be a near-term trigger. Consensus expects continued top-line acceleration (rev growth +20.1% TTM); forward P/E 52x reflects margin recovery optionality off a -8% op margin trough. Last several quarters showed sequential improvement consistent with semi recovery narrative.
BUSINESS & POSITION
Silicon Labs designs low-power wireless SoCs (Bluetooth, Zigbee, Thread, Matter, Wi-Fi) targeting IoT applications in smart home, industrial, and metering markets. It is a pure-play category leader in connected-device silicon with a deep design-win pipeline ahead of an IoT inventory restock cycle.
FACTOR & THEME
Taps the IoT semi recovery / Matter protocol adoption and the edge-AI connectivity narrative, with Technology leading sectors (+9.6%). Revenue growth re-accelerating to +20.1% as inventory destock ends - classic post-trough semi play.
NEWS FLOW
No headline catalysts in last 30-60 days; the move is part of the broader IoT/edge-semi peer rerating (Lattice, Synaptics read-throughs). Catalyst type: Industry / Impact: Medium. Within 1% of pivot suggests a single sector tape day can trigger.
INSTITUTIONAL
Vol contraction 491k426k421k with vol_ratio 0.76 today shows clean dry-up at the pivot - a 9.6% short interest with 4.8 days-to-cover gives meaningful squeeze fuel on any beat. Zero insider buying in 60d (baseline); inst ownership data unavailable.
KEY RISK
Thesis invalid on a close below \$208 (50-day MA and base midpoint); a renewed IoT demand miss at the August print would invalidate the recovery thesis.

Within 1% of pivot with vol dry-up and IoT/Tech leadership tailwind plus 9.6% short interest creates asymmetric squeeze potential - strongest disconfirming argument is RS line NOT at new high and RS vs SPY -1.8% means the stock is a laggard within a leading sector, suggesting the breakout could be a sympathy move rather than a leadership move. Conviction: Medium.

SLAB — 90D Base Setup | Pivot: \$218.68 (gold) | SMA: 9(blue) 21(orange) 50(green) 200(red)

Close above \$79.75 on volume >150% of 20-day avg (>2.2M shares)
Target: \$92 (15% measured move; consensus PT \$72.56 will lag the move)
Stop: \$70 (50-day MA / base low)

CATALYST INTELLIGENCE
EARNINGS
Jul 29 - Print 71 days away. Consensus EPS forward \$2.05 vs TTM \$1.38 implies +49% earnings growth on +37.3% revenue growth - a serial top-line beater. Last several quarters showed gross margin expansion as freight/coconut sourcing costs normalized; recent guidance raised.
BUSINESS & POSITION
Vita Coco is the dominant U.S. coconut water brand with ~50% category share, leveraging an asset-light branded model with manufacturing through co-packers. The company is expanding internationally and into adjacencies (Vita Coco Spiked, oil) as the better-for-you hydration category compounds.
FACTOR & THEME
Pure-play on the consumer-staples premiumization rotation (sector +4.8% recently) with secular tailwind from Gen-Z hydration trends and a halo from the broader functional beverage boom. RS vs SPY +40.2% is best-in-cohort leadership.
NEWS FLOW
Tape strength reflects ongoing market-share gains vs. legacy beverage competitors and incremental retail door wins. Catalyst type: Industry / Impact: Medium. No specific 30-60 day company-specific catalyst, but RS +40 implies the smart money is positioning ahead of category narrative reacceleration.
INSTITUTIONAL
Volume dry-up from 1.98M1.37M1.33M is meaningful on a 49M float - 12.8% short interest with 3.9 days-to-cover is the alpha kicker: a breakout on volume forces covering. Zero insider buying in 60d (baseline); inst ownership unavailable.
KEY RISK
Thesis invalid on a close below \$70 (50-day MA and prior base low); coconut commodity cost spike or Whole Foods/Costco shelf-space reset would damage the unit-economics narrative.

Best-in-cohort RS (+40%) with 12.8% short interest and clean vol dry-up creates genuine asymmetric squeeze fuel; the strongest disconfirming argument is the wide base,tight 9.99 (loose by VCP standards) and the fact that price already trades above the consensus \$72.56 PT, meaning analyst upgrade cycle rather than fresh institutional money is the marginal buyer. Conviction: Medium.

COCO — 90D Base Setup | Pivot: \$79.70 (gold) | SMA: 9(blue) 21(orange) 50(green) 200(red)

ENTRY TRIGGER

Close above \$40.15 on volume >150% of 20-day avg (>1.9M shares)

Target: \$45 (12% measured move on offshore-cycle catch-up)

Stop: \$35 (50-day MA / base low)

CATALYST INTELLIGENCE

EARNINGS

Jul 22 - Print 64 days out. Forward EPS \$2.20 vs TTM \$3.36 reflects guide reset; rev growth +2.7% understates day-rate improvement embedded in subsea backlog. ROE 35.9% remains a standout in the OFS group.

BUSINESS & POSITION

Oceaneering operates the world's largest fleet of work-class ROVs (remotely operated vehicles) servicing offshore oil & gas production, with a growing aerospace/defense robotics segment. It is a pure-play beneficiary of the multi-year offshore deepwater capex restart.

FACTOR & THEME

Taps the Energy sector leadership (+8.3%) and the offshore capex super-cycle as IOCs return to deepwater Brazil, Guyana, Gulf of Mexico. Defense robotics optionality adds secular kicker.

NEWS FLOW

Tape is following the offshore-rig peer complex (TDW, RIG read-throughs); no company-specific 30-60 day catalyst. Catalyst type: Industry / Impact: Medium.

INSTITUTIONAL

Vol contraction 1.27M1.10M722k with vol_ratio 0.32 today is a textbook dry-up; 7.6% short interest with 4.5 days-to-cover offers squeeze fuel into any offshore data point.

KEY RISK

Thesis invalid on a close below \$35 (50-day MA / base low), or a Brent crude collapse below \$65 that defers offshore FIDs.

Tightest base in the cohort (1.69) with cleanest volume dry-up (vol_ratio 0.32) in a leading sector (Energy +8.3%) - the strongest disconfirming argument is RS line NOT at new high, RS vs SPY -2.4%, and price 5.6% from pivot means the trigger is 1-2 weeks out and the stock is currently a sector laggard. Conviction: Medium.

OII — 90D Base Setup | Pivot: \$40.12 (gold) | SMA: 9(blue) 21(orange) 50(green) 200(red)

Close above \$87.75 on volume >150% of 20-day avg (>615k shares)
Target: \$98 (12% measured move on EMS rerating)
Stop: \$75 (50-day MA)

CATALYST INTELLIGENCE
EARNINGS
Jul 29 - Print 71 days out. Forward EPS \$3.10 vs TTM \$0.94 implies +230% earnings recovery; revenue growth +7.2% with earnings growth +260% signals operating leverage inflection. Recent quarters showed sequential margin improvement consistent with mix shift to A&D.
BUSINESS & POSITION
Benchmark Electronics is a contract electronics manufacturer focused on higher-mix, higher-complexity end markets - aerospace & defense, industrial, medical, and emerging AI/HPC server platforms. It is a fast follower in the EMS group with margin-expansion optionality as defense and reshoring volumes scale.
FACTOR & THEME
Triple-stacked exposure to defense spending, reshoring, and AI server buildout - three of the strongest secular themes. Technology sector leadership (+9.6%) and best-in-cohort RS +34.8% confirm the multi-theme positioning is being recognized.
NEWS FLOW
Tape strength reflects peer rerating in EMS (Celestica, Jabil read-throughs) on AI server and defense demand. Catalyst type: Industry / Impact: High. No specific 30-60 day company catalyst, but RS +34.8% indicates pre-earnings positioning.
INSTITUTIONAL
Vol contraction 633k389k384k is a clean dry-up with vol_ratio 0.45; RS +34.8% with no headline news is textbook quiet institutional accumulation. Zero insider buying in 60d (baseline); inst ownership unavailable.
KEY RISK
Thesis invalid on a close below \$75 (50-day MA); pivot is 7.9% away so the trigger is 2-3 weeks out and a market drawdown could deepen the base.

Best multi-theme exposure in the cohort (defense + reshoring + AI EMS) with RS +34.8% and clean vol dry-up - strongest disconfirming argument is pivot 7.9% away (max allowed) and base_tight 5.7 is loose, meaning the trigger is 2-3 weeks out and structural quality is one tier below A. Conviction: Medium.

BHE — 90D Base Setup | Pivot: \$87.73 (gold) | SMA: 9(blue) 21(orange) 50(green) 200(red)

CATALYST INTELLIGENCE

EARNINGS

EARNINGS IN 71D

Clean tight base and vol dry-up, but RS not at new high, RS -1.1%, and price already at consensus PT - structural quality without alpha angle. Conviction: Low.
