Target: \$26.50 first target (52w high breakout + measured move from 3.6% base); \$30+ on FCC catalyst
Stop: \$20.50 (prior base low, ~10% risk; tight stop \$21.80 below 50dma for swing sizing)

CATALYST INTELLIGENCE
EARNINGS
August 5 - Next print ~78 days out (Aug 5) - not the near-term catalyst. Consensus FY EPS deeply negative (fwd -\$0.73); revenue minimal; P/S of ~773x is irrelevant - this is a spectrum-value/policy bet, not a fundamentals story.
BUSINESS & POSITION
NextNav owns Lower 900 MHz licensed spectrum and operates a terrestrial 3D positioning and timing network positioned as a GPS complement/backup. The company has filed a high-profile FCC petition to reconfigure the Lower 3 GHz band to deliver a nationwide 5G-based PNT service, a strategic optionality play on national security spectrum policy.
FACTOR & THEME
Direct exposure to two accelerating themes: GPS-resilience/national security spectrum policy and 5G infrastructure buildout. Sentiment is binary and policy-driven - FCC noises and DoD/FAA GPS-jamming concerns have kept the name bid, but it trades as a spectrum-option, not an earnings story.
NEWS FLOW
Catalyst type: Regulatory (High impact). The setup is driven by ongoing FCC proceedings on the Lower 3 GHz band reconfiguration - any procedural step, NPRM advancement, or DoD/FAA endorsement is a step-function catalyst. Stock has rallied from \$11 to \$22+ on policy optimism; tape is now coiled within 1% of the pivot awaiting the next regulatory headline.
INSTITUTIONAL
Inst ownership data unavailable from this feed (likely high given small float and prior accumulation runs). Zero insider buying in last 60d - neutral, not a red flag given prior run. 18.3% short interest with 5.8 days-to-cover creates real squeeze fuel if an FCC headline hits.

KEY RISK
Thesis invalid on a close back below the \$20.50 prior base low, or on an adverse FCC ruling/Notice rejecting the Lower 3 GHz petition - this is a single-point-of-failure regulatory bet.
Within 0.5% of pivot with 28% RS vs SPY and 18% short interest stacks the squeeze setup, but base_tight 3.62 is loose and vol pattern is not clean stair-step (w2 was the dry-up trough, w3 rebounded). Strongest bear argument: there is no scheduled catalyst - the FCC timeline is open-ended, making this a 'right setup, wrong clock' risk in a mixed regime. Conviction: Medium.

ENTRY TRIGGER

Close above \$77.84 on volume >150% of 20-day avg (>250K shares)

Target: \$87.67 (analyst consensus PT, +17%); secondary \$92 on measured move from 12-month cup

Stop: \$69.50 (50dma + base low, ~7% risk); pre-earnings de-risk: half-size only into print

CATALYST INTELLIGENCE

EARNINGS

May 21 - Q1 print in 2 days - this is the catalyst. Fwd EPS \$16.01 vs TTM \$9.59 implies +67% earnings growth trajectory; consensus tilted bullish given charter visibility. No published recent guide miss; PT \$87.67 implies ~17% upside to consensus.

BUSINESS & POSITION

Navios Maritime Partners is a diversified shipping LP operating dry-bulk, containership, and tanker fleets with long-term charter contracts providing cash flow visibility. Trades at 4.7x fwd P/E and 0.7x book - classic deep-value shipping LP with a meaningful NAV discount.

FACTOR & THEME

Exposure to shipping rate cycle, Red Sea re-routing tonne-mile demand, and energy/commodity transport. Energy sector leadership (+8.3% 20d) is a tailwind read-through; small-cap industrials are lagging (IWM -1.2%) which caps the macro beta.

NEWS FLOW

Catalyst type: Earnings (High impact) in 2 days. The dominant news item is the insider cluster: 41 open-market buys totaling \$3.4M in last 60 days - extraordinary signal density immediately ahead of the print. No senior C-suite name in the cluster (insider_senior=0), but cluster=7 with \$3.4M dollar size is materially above the noise floor.

INSTITUTIONAL

Inst ownership unavailable from feed (typical data gap for LPs). The 41-buyer/\$3.4M open-market insider cluster in the 60 days leading into Wednesday's earnings is the dominant tell - multiple insiders putting real capital to work pre-print is one of the strongest single alpha factors and explicitly supports a grade upgrade per the cluster rule, though I am tempering because no senior officer is named.

KEY RISK

Thesis invalid on a close below \$69.50 (50dma / base structure low), or on a Q1 miss + soft charter outlook on May 21 - earnings is a true binary 2 days out and 4% from pivot means you can be wrong fast.

Insider cluster (41 buys, \$3.4M, cluster=7) is the rare top-tier signal and justifies an upgrade from C to B, but I am NOT upgrading further to A because (1) earnings binary is 2 days out with the stock still 4% from pivot - high probability of either gap-through or gap-fail rather than a clean coil break, (2) no senior officer in the cluster, and (3) macro regime is mixed with small-caps lagging. Strongest bear argument: shipping is hyper-cyclical and a single soft charter-rate comment on the call can reset the multiple instantly. Conviction: Medium.

CATALYST INTELLIGENCE
EARNINGS
August 6
Tight base (1.98) and 8.7 RS vs SPY are constructive but vol contraction is weak (3.7%, w1<w3<w2 - not clean stair-step), price is 5.6% from pivot, RS line not at new high, and revenue growth is still -2.6% with no near-term catalyst (earnings 79d out). Conviction: Low.

ENTRY TRIGGER
Close above \$23.53 on volume >150% of 20-day avg (>3.75M shares)
Target: \$26.45 (52w high) then \$28+ measured move
Stop: \$20.80 (50dma / base low, ~7% risk)
