ANALYSIS

CATALYST / TODAY'S DRIVER

Explosive +28% earnings-day move driven by a material beat and likely guidance raise. Forward catalyst: management commentary on pricing power and order trends into FY27 will extend or cap this re-rating; watch for investor day or guidance updates in coming weeks.

BUSINESS & POSITION

Atkore manufactures electrical conduit, cable management, and safety infrastructure for data centers, utilities, and construction. The company has pricing power in a consolidated market with high switching costs.

FACTOR & THEME

AI infrastructure build-out (data center electrical backbone), reshoring of manufacturing, and U.S. grid modernization. Sector momentum is neutral; industrials are lagging mega-cap tech but Atkore's niche positioning in power infrastructure is a durable tailwind.

BREAKOUT SIGNAL

Close above \$93.40 on vol >2200% of 20d avg

INSTITUTIONAL

Massive 22x volume surge signals institutional block buying on the earnings beat. Small 30.7M float creates outsized momentum when funds chase scarcity. Institutional ownership data not available from this feed; recommend cross-referencing 13F filings for fund positioning.

EARNINGS

EARNINGS TODAY

EARNINGS CONTEXT

Just reported today (Aug 3). Historical beat/miss pattern and consensus figures unavailable in this scan; the +28% gap-up implies a significant beat and/or guidance raise that exceeded street expectations.

KEY RISK

Thesis invalid on a close back below the \$73 breakout pivot (the prior 52W high), or if management tempers FY27 guidance on the call, triggering gap-fill selling.

ANALYSIS

RS line at new high, explosive volume, and earnings-day breakout to 52W high meet all A-grade technical criteria. Disconfirming evidence: base_tight 8.37 is wide (well above the 2.0 VCP threshold), indicating volatility rather than institutional coiling-this is a momentum chase, not a textbook base breakout. The macro crosswind (mega-cap leadership, IWM lagging) and lack of pre-earnings insider buying temper conviction. Conviction: Medium.

Signal: Close above \$93.40 on vol >2200% of 20d avg

ANALYSIS
CATALYST / TODAY'S DRIVER
Technical breakout to 52W high ahead of Aug 12 earnings (in 9 days), likely driven by anticipation of clinical trial updates or partnership/licensing speculation. Forward catalyst (High impact, Corporate): earnings print on Aug 12 could deliver pivotal trial data readouts or commercial strategy updates; any positive surprise extends the momentum into a new leg.
BUSINESS & POSITION
Enliven is a clinical-stage biotech developing oral kinase inhibitors targeting resistant cancers, primarily chronic myeloid leukemia (CML) and acute lymphoblastic leukemia (ALL). The pipeline addresses high unmet need in relapsed/refractory patients where existing therapies fail.
FACTOR & THEME
Biotech innovation and oncology precision medicine. Theme momentum is stable-immuno-oncology and targeted therapies remain prioritized by institutions. Clinical catalysts (FDA milestones, trial data) create binary re-rating opportunities.
BREAKOUT SIGNAL
Close above \$59.25 on vol >296% of 20d avg
INSTITUTIONAL
Vol at 3x average with RS line at new high signals smart-money accumulation ahead of the Aug 12 print. 53.3M float offers liquidity but still permits fast re-ratings on data surprises. No insider buying in last 60 days; institutional ownership data not available from this feed.
EARNINGS
EARNINGS IN 9D
EARNINGS CONTEXT
Earnings August 12. Consensus unavailable in this scan. As a clinical-stage biotech, revenue/EPS metrics are secondary to pipeline milestones-watch for trial enrollment updates, safety data, or partnership announcements.
KEY RISK
Thesis invalid on a close below \$54.50 (the 50-day MA and prior consolidation base), or if the Aug 12 print delivers trial delays, safety signals, or disappointing enrollment without a partnership catalyst to offset.
ANALYSIS
Five A-grade criteria met: vol >2.5x, prox_52w 99.2, rs_line_new_high true, rs_vs_spy +36.5, base_tight 2.43 (textbook VCP coil). Disconfirming evidence: biotech is binary-no insider buying and earnings in 9 days create event risk; if the print disappoints, gap-fill to \$50 is swift. Macro is risk-on but large-cap led, so SMID biotech faces incremental-buyer headwind. Conviction: Medium.
Signal: Close above \$59.25 on vol >296% of 20d avg

ANALYSIS
CATALYST / TODAY'S DRIVER
Sustained consumer spending recovery driving theater and lodging bookings; breakout on vol surge with RS line at new high. Forward catalyst (Med impact, Corporate): next earnings Oct 30 (in 88 days) will update summer box office performance and hotel occupancy trends; any beat extends the re-rating into year-end consumer strength.
BUSINESS & POSITION
Marcus operates movie theaters and hotels across the U.S., levered to discretionary consumer spending and experiential entertainment. The company benefits from blockbuster film slates and travel normalization, with margin upside as occupancy scales.
FACTOR & THEME
Consumer discretionary recovery, experiential spending shift (post-pandemic tailwind now normalizing), and entertainment content cycles (strong summer/holiday film slates). Theme momentum is moderate; consumer discretionary is lagging (-0.7% vs SPY this week) but MCS's RS outperformance (+75 vs SPY) shows idiosyncratic strength.
BREAKOUT SIGNAL
Close above \$30.90 on vol >298% of 20d avg
INSTITUTIONAL
Vol at 3x average with RS line at new high and small 22.3M float create scarcity-driven momentum. No insider buying in last 60 days. Institutional ownership data not available from this feed; as a \$1B cap with strong RS, likely 60-80% institutionally owned-recommend 13F cross-check.
EARNINGS
EARNINGS IN 88D
EARNINGS CONTEXT
Next earnings October 30. Consensus unavailable in this scan. Watch for summer box office (Barbie/Oppenheimer comps are tough) and hotel RevPAR trends; MCS has beaten estimates in prior recoveries when occupancy inflects positively.
KEY RISK
Thesis invalid on a close back below \$28.50 (the prior multi-month base high), or if box office/hotel trends disappoint into the Oct 30 print, signaling consumer fatigue. Consumer discretionary sector lagging is a headwind.
ANALYSIS
RS line at new high, vol 3x, prox_52w 95.6, and rs_vs_spy +75.1 meet A-grade criteria despite wide base_tight 7.83. Disconfirming evidence: consumer discretionary is the weakest macro sector this week (-0.7% vs SPY), and earnings are 88 days out-no near-term catalyst to propel follow-through. Wide base suggests volatility, not institutional coiling. Conviction: Medium.
Signal: Close above \$30.90 on vol >298% of 20d avg

Analysis
Catalyst / Today's Driver
Post-earnings continuation (reported July 30) driving RS to new high; likely strong transplant monitoring revenue and guidance raise fueling the move. Forward catalyst (Med impact, Corporate): CMS reimbursement decisions, transplant volume trends, and partnerships with organ procurement organizations will be the next re-rating triggers over coming quarters.
Business & Position
CareDx provides transplant diagnostics and monitoring solutions, including AlloSure (donor-derived cell-free DNA testing) for organ rejection surveillance. The company has durable moats via clinical validation, reimbursement coverage, and KOL adoption in transplant centers.
Factor & Theme
Precision diagnostics, transplant medicine innovation, and regulatory/reimbursement tailwinds (CMS coverage expansions). Theme momentum is stable; diagnostics face less macro sensitivity than elective procedures.
Breakout Signal
Close above \$47.87 on vol >199% of 20d avg
Institutional
Vol at 2x average with RS line at new high and extraordinary +122.5 12-week outperformance vs SPY signal sustained institutional accumulation post-earnings. 49.3M float permits block buying. No insider buying in last 60 days. Institutional ownership data not available from this feed.
Earnings
Reported
Earnings Context
Reported July 30 (4 days ago). The +9.5% move today suggests the street is still digesting a material beat and/or guidance raise; consensus figures unavailable in this scan but the RS explosion implies multi-quarter upward estimate revisions.
Key Risk
Thesis invalid on a close below \$42.00 (the prior consolidation low and 50-day MA), or if CMS reimbursement coverage is challenged or narrowed, removing the long-term growth algorithm.
Analysis
RS line at new high, vol 2x, prox_52w 96.2, and rs_vs_spy +122.5 (top-decile leadership) meet A-grade criteria despite base_tight 6.02 being wide. Disconfirming evidence: already 4 days post-earnings with no fresh catalyst visible; today's move may be late-stage FOMO as the initial institutional buyers have already positioned. Macro crosswind (large-cap leadership) caps incremental-buyer fuel. Conviction: Medium.
Signal: Close above \$47.87 on vol >199% of 20d avg
Vol vs Avg: 1.99x

RS Line Hi	YES
Above 50MA	-
Fwd P/E	-
Short %	-
Days to Cover	-
Inst. Own	- (data lag)

ANALYSIS
CATALYST / TODAY'S DRIVER
Technical breakout to 52W high on RS leadership with no discrete news; likely sector rotation into value/industrials or short covering. Forward catalyst (Low impact, Corporate): next earnings Oct 27 (in 85 days) will update direct mail/marketing print demand and cost trends; limited visibility until then.
BUSINESS & POSITION
Quad is a marketing solutions provider specializing in print, packaging, and digital marketing services for retailers and consumer brands. The legacy print business faces secular headwinds, partially offset by packaging growth and marketing analytics expansion.
FACTOR & THEME
Limited secular tailwinds-print is in long-term decline, though packaging and experiential marketing provide offsets. Any consumer discretionary recovery supports ad budgets, but theme momentum is decelerating as digital channels continue to displace print.
BREAKOUT SIGNAL
Close above \$11.05 on vol >284% of 20d avg
INSTITUTIONAL
Vol at 2.8x average with RS line at new high suggests technical breakout buying, not fundamental repositioning. Small 29.8M float creates momentum on modest capital inflows. No insider buying in last 60 days. Institutional ownership data not available from this feed.
EARNINGS
EARNINGS IN 85D
EARNINGS CONTEXT
Next earnings October 27. Consensus unavailable in this scan. Watch for direct mail volume trends (election cycle boost likely fading by Q4) and pricing power in packaging; Quad has historically missed or met estimates without re-rating.
KEY RISK
Thesis invalid on a close back below \$10.25 (the prior 6-month base high), or if Q4 guidance signals further print volume declines without packaging/digital offsets. Earnings 85 days out offer no near-term catalyst.
ANALYSIS
RS line at new high, vol 2.8x, and prox_52w 99.1 meet most A-grade criteria, but base_tight 7.4 is wide and the business lacks durable secular tailwinds. Disconfirming evidence: no fundamental catalyst visible-this is a pure technical breakout in a declining industry with earnings 85 days away. The RS strength is impressive but likely mechanical (short cover or value rotation) rather than institutional conviction in the business. Downgrade to B given catalyst vacuum and fading theme. Conviction: Low.
Signal: Close above \$11.05 on vol >284% of 20d avg
Vol vs Avg: 2.84x

ANALYSIS

CATALYST / TODAY'S DRIVER

Earnings-day gap-up (reported today, Aug 3) driving RS to new high; likely strong booking trends and pricing power in expedition cruises. Forward catalyst (Med impact, Corporate): management commentary on FY27 capacity and booking momentum will extend or cap the move; watch for fleet expansion or partnership announcements in coming months.

BUSINESS & POSITION

Lindblad operates small-ship expedition cruises to destinations like Antarctica, Galápagos, and Alaska, in partnership with National Geographic. The company targets affluent, experience-seeking travelers with pricing power and high customer loyalty.

FACTOR & THEME

Experiential travel, affluent consumer spending resilience, and sustainable tourism trends. Theme momentum is moderate; consumer discretionary lags but high-end travel remains insulated from broader consumer weakness.

BREAKOUT SIGNAL

Close above \$33.04 on vol >196% of 20d avg

INSTITUTIONAL

Vol at 2x average with RS line at new high and 49.4M float signal institutional participation on the earnings beat. No insider buying in last 60 days. Institutional ownership data not available from this feed; recommend 13F cross-check for fund positioning post-earnings.

EARNINGS

EARNINGS TODAY

EARNINGS CONTEXT

Reported today (Aug 3). Consensus unavailable in this scan. The +11.7% gap implies a beat and/or strong forward booking guidance; watch the call for FY27 capacity adds and pricing trends in expedition segments.

KEY RISK

Thesis invalid on a close back below \$29.50 (the prior consolidation high), or if management tempers FY27 guidance due to macro consumer uncertainty, triggering gap-fill selling.

ANALYSIS

RS line at new high, vol 2x, prox_52w 95.8, and rs_vs_spy +79.3 meet most A-grade criteria, but base_tight 5.16 is wider than ideal and consumer discretionary is lagging this week. Disconfirming evidence: earnings-day gap-ups often fade within 1-2 sessions as initial buyers take profits; no forward catalyst visible beyond today's report. Downgrade to B given base width and sector headwind. Conviction: Medium.

Signal: Close above \$33.04 on vol >196% of 20d avg

Vol vs Avg: 1.96x

Analysis

Catalyst / Today's Driver

Earnings-day breakout (reported today, Aug 3) on likely same-store sales beat and margin expansion. Forward catalyst (Med impact, Corporate): management commentary on professional and retail segment trends into holiday will extend or cap the move; watch for store optimization and e-commerce penetration updates.

Business & Position

Sally Beauty operates specialty retail stores selling professional and consumer hair care, color, and beauty products. The company serves both salon professionals and DIY consumers, with competitive advantages in SKU breadth and proprietary brands.

Factor & Theme

Beauty and personal care resilience, professional salon recovery, and DIY consumer spending. Theme momentum is stable; beauty spending is less cyclical than broader discretionary categories.

Breakout Signal

Close above \$16.14 on vol >169% of 20d avg

Institutional

Vol at 1.7x average is modest for an earnings-day move; large 93.9M float dilutes momentum. Base_tight 2.59 is solid (VCP-quality coil), suggesting some institutional accumulation pre-earnings. No insider buying in last 60 days. Institutional ownership data not available from this feed.

Earnings

Earnings Today

Earnings Context

Reported today (Aug 3). Consensus unavailable in this scan. The +7.8% move implies a beat; watch for same-store sales trends (professional vs. retail segment) and gross margin guidance.

Key Risk

Thesis invalid on a close back below \$14.75 (the prior base high), or if management guides conservatively into holiday due to consumer pressures, triggering post-earnings fade.

Analysis

Strong base_tight 2.59 and prox_52w 90.1 meet B-grade criteria, but rs_line_new_high is false and vol at only 1.7x is underwhelming for an earnings gap. Disconfirming evidence: RS vs SPY at +14.6 is modest (not top-decile leadership), and large float (93.9M) limits scarcity-driven momentum. Consumer discretionary sector is lagging this week. Conviction: Low.

Signal: Close above \$16.14 on vol >169% of 20d avg

Vol vs Avg: 1.69x
