|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| EARNINGS                                                                                                                                                                                                                                                                                                                                                      |
| Forward P/E 28.7 on EPS_fwd of \$2.72 vs TTM \$0.84 reflects sharp acceleration; revenue growth 55% and earnings growth 127% indicate scaling power-gen deployments. Serial beater on backlog disclosures over last 3 quarters.                                                                                                                               |
| BUSINESS & POSITION                                                                                                                                                                                                                                                                                                                                           |
| Solaris Energy Infrastructure provides mobile/modular natural gas power generation equipment, increasingly deployed for behind-the-meter power solutions to data centers and oilfield operations. The company has pivoted aggressively into the AI data center power bottleneck thesis, fielding turbine fleets to fill the multi-year grid interconnect gap. |
| FACTOR & THEME                                                                                                                                                                                                                                                                                                                                                |
| Direct play on AI infrastructure power scarcity - the single hottest secular theme in 2026, with peer reads from GEV, VRT, and TLN showing accelerating sentiment. Energy sector leadership (+7.2% 20d) provides additional tailwind.                                                                                                                         |
| NEWS FLOW                                                                                                                                                                                                                                                                                                                                                     |
| Continued contract announcements for data center power deployments through Q1/Q2 2026; sector peers (GEV, VRT) hitting new highs reinforces theme. 22.6% short interest with 5.2 days-to-cover creates squeeze potential as RS line breaks to new high.                                                                                                       |
| INSTITUTIONAL                                                                                                                                                                                                                                                                                                                                                 |
| Insider cluster score 4 - 2 buys totaling \$451K in last 60 days, a meaningful conviction signal in a name with only 55M float. Not senior-officer level so insufficient for full grade upgrade, but reinforces the accumulation thesis visible in the vol dry-up (2.6M2.2M2.0M).                                                                             |
| KEY RISK                                                                                                                                                                                                                                                                                                                                                      |
| High beta (1.26) and 22.6% short interest cuts both ways - any data center capex pause narrative (hyperscaler digestion fears) could trigger sharp reversal; debt/equity 146% adds leverage risk.                                                                                                                                                             |

Textbook VCP with clean vol stair-step (261022382006K), RS line at 52W high, +40% RS vs SPY, and insider buying cluster. Direct exposure to the dominant AI power theme in a risk-on regime where energy is a leading sector - top-tier alpha asymmetry.

| Chefs' Warehouse is the leading specialty food distributor to independent fine-dining restaurants, hotels, and country clubs in North America. Its niche focus on premium proteins, cheeses, and specialty imports gives it pricing power and category leadership Sysco/USFD don't replicate at scale. |
| FACTOR & THEME                                                                                                                                                                                                                                                                                         |
| Beneficiary of sustained premium consumer spending and fine-dining resilience; Consumer Staples leadership (+2.8%) provides modest tailwind. RS line at new high while sector is muted suggests idiosyncratic strength.                                                                                |
| NEWS FLOW                                                                                                                                                                                                                                                                                              |
| Continued tuck-in acquisitions expanding geographic footprint; gross margin expansion to 24.3% from category mix shift. 14.1% short interest with 8.7 days-to-cover is meaningful squeeze fuel given the thin 36.8M float.                                                                             |
| INSTITUTIONAL                                                                                                                                                                                                                                                                                          |
| No insider activity in last 60d. Vol dry-up to 364K (from 562K) on a name averaging only 480K daily reflects genuine institutional accumulation - float is tight at 36.8M and short ratio 8.7 days is squeeze-ready.                                                                                   |
| KEY RISK                                                                                                                                                                                                                                                                                               |
| Base_tight 6.42 is loose for an A-grade - base could need another shake before clean breakout; consumer downturn would hit premium foodservice first.                                                                                                                                                  |

Solid VCP with clean vol contraction (562510364K) and RS line at new high, but base\_tight 6.42 is too wide for A-grade. Tight float + 8.7-day cover ratio creates asymmetric squeeze potential on trigger.

| Vita Coco is the category-leading coconut water brand with ~50% US market share, expanding into functional hydration and energy drinks (Vita Coco Treats, energy line). Brand moat in a fast-growing better-for-you beverage category with global expansion runway. |
| FACTOR & THEME                                                                                                                                                                                                                                                      |
| Consumer staples beverages + functional/better-for-you secular trend; peer reads from CELH, MNST historical patterns show category leaders compound on brand strength. Low beta 0.71 makes it a defensive growth name.                                              |
| NEWS FLOW                                                                                                                                                                                                                                                           |
| Continued shelf-space gains and new product launches in functional category; international expansion (UK, Europe) accelerating. 12.8% short interest creates secondary squeeze fuel.                                                                                |
| INSTITUTIONAL                                                                                                                                                                                                                                                       |
| No insider activity last 60d. Vol pattern is mixed (201312491401K - week 1 ticked up vs week 2) so strict dry-up not confirmed; however the absolute vol_ratio_today 0.4 suggests institutions are quietly holding while sellers exhaust.                           |
| KEY RISK                                                                                                                                                                                                                                                            |
| Base_tight 9.65 is very wide and days_in_base only 6 - setup is structurally young; target price \$72.56 sits below current price suggesting valuation extension worries from sell-side.                                                                            |

Right at pivot with RS line at new high and clean theme exposure, but base\_tight 9.65 and only 6 days in base means the setup is structurally premature for A-grade - needs another 1-2 weeks of tightening. Strict vol dry-up is false; week-over-week not perfectly stair-stepped.

| Forward P/E 679 and revenue growth -43.7% reflect a transition trough - story is about future AI test bookings, not current financials. P/S 70.8 is purely a growth-stage premium; conventional valuation inapplicable.                                                                          |
| BUSINESS & POSITION                                                                                                                                                                                                                                                                              |
| Aehr Test Systems makes wafer-level burn-in test equipment historically for silicon carbide (EV power semis) and now pivoting toward AI processor test/burn-in. Niche category leader in WLBI with high customer concentration but significant TAM expansion as AI accelerators require burn-in. |
| FACTOR & THEME                                                                                                                                                                                                                                                                                   |
| RS vs SPY +248% reflects the AI-test pivot narrative driving an extreme momentum re-rating. Tech leadership sector + AI chip test sub-theme = highest beta thematic exposure on the list.                                                                                                        |
| NEWS FLOW                                                                                                                                                                                                                                                                                        |
| AI chip test customer qualification announcements have driven the multi-bagger move from \$8 to \$100+ over the past year. Story is binary on continued AI customer wins - any large hyperscaler-related test contract would be the catalyst.                                                    |
| INSTITUTIONAL                                                                                                                                                                                                                                                                                    |
| No insider buying flagged. 15.8% short interest with only 1.1 days-to-cover means most shorts are dynamic - squeeze potential is limited. Vol dry-up is genuine (335128782686K) but RS line is NOT at new high despite +248% RS, indicating prior peak overhead.                                 |
| KEY RISK                                                                                                                                                                                                                                                                                         |
| Pre-profit, customer-concentrated (historical SiC concentration in Onsemi), beta 3.27 - any AI test customer disappointment triggers 30%+ drawdown; street target \$63.67 is 38% below current.                                                                                                  |

Tight base 2.4 and extreme RS, but RS line not at new high and pivot 6.7% away with sell-side target 38% below price create asymmetric risk. Tradeable on momentum but structural quality only B.

| Target Pr.                                 | \$72.92         |

ENTRY TRIGGER

Close above \$104.90 on volume >150% of 20-day avg (>1.68M shares)

Target: \$115-120 (measured move; sell-side disconnect creates either re-rating or fade risk)

Stop: \$96.00 (below recent base low; ~8% risk)

CATALYST INTELLIGENCE

EARNINGS

Forward P/E 14.4 on EPS\_fwd \$7.16 vs TTM \$14.15 (post-emergence quirk). Revenue growth -25% reflects contract roll timing; forward backlog is what matters and peer commentary points to 2026/27 visibility improving.

BUSINESS & POSITION

Valaris is one of the largest offshore drillers globally, with a high-spec floater and jackup fleet positioned for the multi-year offshore upcycle as IOCs/NOCs commit to deepwater development. Day rates have re-rated significantly from 2021 troughs.

FACTOR & THEME

Energy sector leadership (+7.2%) + offshore capex cycle (peers RIG, NE, BORR all showing strength). Pure cyclical exposure with high operating leverage on day-rate inflection.

NEWS FLOW

Contract awards continuing across the floater fleet; deepwater rig supply tightness continues to support day-rate negotiations. Sector momentum (Energy +7.2% 20d) reinforces.

INSTITUTIONAL

No insider buying flagged. Vol dry-up is clean (983915661K) and 13.6% short interest with 7.3 days-to-cover provides squeeze fuel. RS line not at new high keeps this from A-grade despite tight structural setup.

KEY RISK

Street target \$72.92 is 29% below current price - significant valuation skepticism from sell-side suggests near-term resistance; oil price reversal would crush day-rate expectations.

Within 2% of pivot with clean vol dry-up and Energy sector tailwind, but RS line not at new high and street target 29% below price create resistance overhead. Solid B for the breakout but not A-quality alpha asymmetry.

**ENTRY TRIGGER**  
Close above \$61.15 on volume >150% of 20-day avg (>420K shares)  
  
**Target: \$66-68 (measured move + street target \$65.80)**  
**Stop: \$55.00 (below 50-day MA)**

CATALYST INTELLIGENCE

Extremely tight base (1.64) but negative RS -13.3% and no thematic catalyst - regional banks lack the alpha angle to justify A/B grade in this regime.
