| Current move driven by massive 11.76% breakout surge above prior consolidation on nearly 3x volume, likely sector rotation into cybersecurity software during risk-on regime. Forward catalyst: October 28 earnings print (62 days out) with potential guidance raise given the explosive price action signaling institutional pre-positioning ahead of Q3 results.                                                                                                                                                                                                                                         |
| BUSINESS & POSITION                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| Tenable is a leading cloud-based vulnerability management and cybersecurity exposure management platform, competing with Qualys and Rapid7 in the critical infrastructure security space. The company delivers continuous visibility across IT/OT/cloud attack surfaces, commanding premium pricing as enterprises accelerate zero-trust and compliance mandates.                                                                                                                                                                                                                                           |
| FACTOR & THEME                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| Direct exposure to accelerating cybersecurity spending driven by rising nation-state threats, ransomware proliferation, and regulatory pressure (SEC cyber disclosure rules, NIS2 in EU). Theme momentum is accelerating as enterprises shift budgets from legacy point solutions to consolidated exposure management platforms-Tenable's core differentiation.                                                                                                                                                                                                                                             |
| BREAKOUT SIGNAL                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| Close above \$37.62 on vol >292% of 20d avg                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| INSTITUTIONAL                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| Volume surge to 2.92x average on an 11.76% move signals institutional block accumulation, not retail chase-this is smart money positioning ahead of the October 28 earnings catalyst. The explosive breakout from a multi-week base suggests funds are front-running a potential guidance raise or major contract announcement. No insider buying data available in last 90 days, but the magnitude of volume + price expansion indicates professional capital deployment.                                                                                                                                  |
| EARNINGS                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

| EARNINGS CONTEXT                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| Next earnings October 28, 2026. Consensus data not provided in feed; recommend verifying EPS/revenue estimates and last four quarters' beat/miss history via Bloomberg/FactSet. The timing (62 days out) and explosive price action suggest institutions are pre-positioning for a beat-and-raise scenario.                                                                                                                                                                                                                                                                                                 |
| KEY RISK                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| Thesis invalidated on a close back below \$34.00 (approximate base breakout level), or on any guidance cut or competitive loss disclosed at the October 28 print. The wide base (2.84 ATR range) creates larger downside volatility if the catalyst disappoints.                                                                                                                                                                                                                                                                                                                                            |
| ANALYSIS                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| Strongest disconfirming evidence: RS line NOT at 52-week high despite a 31.1% 12-week outperformance, and the base is wider than ideal (2.84 vs. <2.0 VCP standard), suggesting prior volatility rather than textbook coiling. However, the combination of 11.76% breakout power, 2.92x volume, leadership sector (Technology +4.3% this week), and a clear forward catalyst (October 28 earnings) 62 days out makes this a high-probability follow-through into that print. The RS line lag and base width downgrade from A to B, but institutional accumulation is unmistakable. Conviction: Medium-High. |
| Signal: Close above \$37.62 on vol >292% of 20d avg                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

| Current move likely driven by sector strength in offshore drilling as WTI holds mid-\$70s and dayrates stabilize. Forward catalyst: November 4 earnings (69 days out) where market will assess contract backlog additions and utilization trends; any incremental rig awards or dayrate improvement would extend the move.                                                                                                                                                                                                                                                                                                                                                          |

| Seadrill is a global offshore drilling contractor operating floaters and jack-ups, competing with Transocean and Valaris in deepwater/harsh-environment markets. The company emerged from restructuring in 2021 and is levered to an improving offshore rig market driven by multi-year underinvestment and rising oil company capex.                                                                                                                                                                                                                                                                                                                                               |
| FACTOR & THEME                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| Exposed to the energy security and offshore spending upcycle as supermajors (Exxon, Shell, Petrobras) commit to multi-year deepwater programs following years of underinvestment post-2014. Theme momentum is neutral-to-positive but episodic-highly sensitive to oil price and geopolitical supply concerns rather than secular tailwinds.                                                                                                                                                                                                                                                                                                                                        |

| Volume at 1.71x is elevated but not explosive, suggesting incremental accumulation rather than a forced institutional buy program. The textbook tight base (1.27 ATR range) is classic VCP coiling, indicating professional supply absorption without headline-driven volatility. No insider buying in last 90 days; float of 57.8M allows for institutional block positioning without excessive slippage.                                                                                                                                                                                                                                                                          |

| Thesis invalidated on a close below \$46.50 (approximate coil support), or on any contract cancellations, rig idling, or dayrate pressure disclosed at the November 4 print. Sector is cyclical and mean-reverting-any oil weakness (<\$70 WTI sustained) kills the narrative.                                                                                                                                                                                                                                                                                                                                                                                                      |
| ANALYSIS                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| Strongest disconfirming evidence: RS vs SPY is barely positive at +0.4%, meaning this is NOT a relative strength leader-it's merely moving in line with the market, and the RS line is not at new highs. The offshore drilling theme is cyclical and lacks the secular acceleration of Tech/Healthcare leaders this week. However, the 1.27 base tightness is textbook VCP coiling (institutions quietly absorbing), proximity to 52W high is 87.2% (breakout zone), and the November 4 earnings catalyst is live. The tight base + forward catalyst earn a B, but weak relative strength and sector headwinds (not a leading sector this week) cap conviction. Conviction: Medium. |
| Signal: Close above \$48.38 on vol >171% of 20d avg                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
