ANALYSIS
CATALYST / TODAY'S DRIVER
Breakout driven by sector rotation into Energy (+8.4% vs SPY this week) and likely margin expansion on refining spreads. Forward catalyst: Q2 earnings on August 7 (21 days) where the market will price updated guidance on specialty products margin and Montana renewable diesel facility ramp.
BUSINESS & POSITION
Calumet is a specialty petroleum products company producing lubricants, solvents, waxes, and renewable fuels through its refining and specialty products segments. The company has pivoted toward higher-margin renewable diesel and specialty chemicals, reducing commodity crack-spread exposure.
FACTOR & THEME
Direct play on energy sector leadership and the ongoing energy transition via renewable diesel capacity. Benefits from tight refining capacity in North America and elevated specialty product demand. Theme momentum accelerating with Energy as the second-leading sector this week.
BREAKOUT SIGNAL
Close above \$42.39 on vol >1.6x of 20d avg
INSTITUTIONAL
Volume at 1.62x is above threshold but not institutional-surge territory; likely mix of momentum retail and sector rotation flows. No insider buying in the last 90 days is a yellow flag-management not putting skin in the game at these highs. Float of 58.4M allows for institutional accumulation but no visible clustered buying pattern.
EARNINGS
EARNINGS IN 21D
EARNINGS CONTEXT
Next print August 7, 2026. Consensus estimates not provided in dataset. Historical beat pattern and guidance trajectory critical-Calumet has volatile earnings tied to crack spreads and renewable diesel startup costs. A beat with raised FY guidance on specialty margins would re-rate the multiple.
KEY RISK
Thesis invalid on a close below \$38.50 (approximately 10% retracement and the prior pivot from late June base), or on any earnings miss or guidance cut at the August 7 print that signals renewable diesel ramp delays or margin compression.
ANALYSIS
Strong RS (+26.7 vs SPY) and proximity to 52W high (99.6) with Energy sector tailwind earn this a B. However, RS line NOT at new high, base_tight at 3.72 (well above the 2.0 VCP threshold-this is a loose, volatile base), no insider buying, and volume surge is modest (1.62x vs the 2.0x+ for A-grade conviction). The strongest disconfirming evidence is the wide base and lack of institutional confirmation signals (no RS line new high, no silent build, no insider cluster). In a Mixed/Transitional regime with VIX elevated, this is a sector-driven momentum trade with binary event risk into August 7 earnings, not a high-conviction breakout. Conviction: Medium.
Signal: Close above \$42.39 on vol >1.6x of 20d avg
Vol vs Avg: 1.62x
