CATALYST INTELLIGENCE
EARNINGS
July 29 - Street expects ~\$0.65 EPS on ~\$1.1B revenue. Last 4 quarters: beat, beat, beat, beat - a serial beater with management consistently guiding conservatively. Guidance maintained at mid-teens revenue growth. 61% earnings growth reflects operating leverage as scale benefits flow through.
BUSINESS & POSITION
CHEF is the leading specialty food distributor to independent restaurants, fine dining establishments, and hospitality groups across the US, offering a curated portfolio of center-of-plate proteins, specialty cheeses, and artisan products. The company operates as a category leader in the fragmented \$30B specialty foodservice distribution market, with scale advantages in procurement and last-mile delivery to white-tablecloth accounts.
FACTOR & THEME
Direct exposure to consumer discretionary dining recovery and premiumization trend as high-income consumers continue trading up to experiential dining. Peer read-through: PFGC and USFD have shown resilient volumes; CHEF's specialty niche insulates from commodity foodservice weakness.
NEWS FLOW
No major contract announcements in last 60 days, but company has been expanding West Coast footprint through tuck-in acquisitions. Russell 2000 inclusion complete. Management presented at June investor conference reiterating full-year guidance. Catalyst: Earnings in 15 days - High Impact event given serial beat history and potential guidance raise.
INSTITUTIONAL
Volume dry-up from 704K 310K with price holding at 52W highs suggests quiet institutional accumulation into the tight base. No insider activity in last 60 days - baseline for most names. Short interest at 15.2% with 8.3 days-to-cover creates squeeze potential on any upside surprise. Float is relatively tight at 36.8M shares.
KEY RISK
Thesis invalid on close below \$96.50 (base low) or if Q2 print shows restaurant traffic deceleration; high debt/equity of 160% creates refinancing risk if rates stay elevated.
Textbook VCP: vol contracts 56% week-over-week, base_tight 1.97, RS line at new 52W high, within 0.7% of pivot. Serial earnings beater with catalyst in 15 days positions this for breakout on results. Strongest bear case: valuation at 37x forward is rich for a distributor, and any restaurant traffic slowdown would compress multiple. Financials sector leadership and Consumer Defensive classification provide macro tailwind. Conviction: High.

Target: \$112 (14% move based on prior base-to-breakout pattern)
Stop: \$92.00 (10-week MA, ~5.8% risk)

CATALYST INTELLIGENCE
EARNINGS
August 5 - Street expects ~\$2.00 EPS on strong AUM growth. Forward P/E of 12.2x is attractive vs. peers at 15-18x. 38.5% earnings growth reflects Amundi synergy realization. Management has consistently beat expectations post-acquisition.
BUSINESS & POSITION
Victory Capital is a diversified asset manager with \$180B+ AUM across actively managed funds, ETFs, and solutions-based products following the Amundi US acquisition. The company operates as a consolidator in the fragmented asset management space, acquiring boutique managers and extracting synergies through centralized distribution and operations.
FACTOR & THEME
Direct beneficiary of Financials sector leadership (+4.9% 20d) and any equity market rally driving AUM growth. The Amundi US integration drove 77% revenue growth - accretive M&A is the secular theme. Peer read-through: BEN and IVZ have stabilized; VCTR's differentiated ETF growth positions it better.
NEWS FLOW
Amundi US integration tracking ahead of schedule per May commentary. No new acquisition announcements but company has stated pipeline remains active. Financials sector rotation providing tailwind - XLF at highs. Catalyst: Earnings in 22 days - Medium Impact given acquisition integration focus.
INSTITUTIONAL
Volume contraction with price at 52W highs indicates accumulation. No insider activity in last 60 days. Short interest modest at 5.9% with 4.9 days-to-cover - not a squeeze candidate but also no overhang. Attractive entry for institutions seeking Financials exposure.
KEY RISK
Thesis invalid on close below \$92.00 (10-week MA) or if AUM outflows accelerate; integration risk from Amundi US remains - any synergy shortfall would pressure shares.

Strong sector tailwind with Financials leading, RS line at new high, and within 0.5% of pivot. However, base_tight at 5.94 is loose (above 2.0 threshold for A-grade), and 7-day base is too short to confirm institutional commitment. Volume contraction exists but is only 25% - would prefer >40%. Strongest bear case: AUM is market-dependent; any risk-off move would pressure flows and earnings. Conviction: Medium.

Target: \$40 (19% measured move based on prior consolidation depth)

Stop: \$31.50 (50-day MA, -4.6% risk)

CATALYST INTELLIGENCE
EARNINGS
August 5 - Street expects ~\$0.32 EPS. Last 4 quarters have been mixed - this is NOT a serial beater. Forward P/E of 25.3x prices in the 206% earnings growth recovery. Revenue growth of 11.4% is solid for a networking turnaround.
BUSINESS & POSITION
Extreme Networks provides cloud-driven enterprise networking solutions including wireless infrastructure, switching, and network management software. The company competes in the \$50B enterprise networking market against Cisco, Arista, and HPE, positioning as a cost-effective alternative with strong cloud management capabilities.
FACTOR & THEME
Exposure to AI infrastructure buildout (campus networking for AI-enabled enterprises) and cybersecurity themes as network visibility becomes critical. Technology sector is lagging (-4.3% 20d), creating headwind. Peer read-through: ANET reported strong cloud titan demand; enterprise refresh cycle showing early signs of recovery.
NEWS FLOW
No major contract wins announced in last 60 days. Company has been expanding ExtremeCloud platform adoption. AI-related campus networking positioning has been highlighted in investor presentations. Catalyst: Earnings in 22 days - Medium Impact given inconsistent beat history.
INSTITUTIONAL
Volume contracting into tight base with RS at 52W high suggests accumulation despite Tech sector weakness. No insider activity in last 60 days. Short interest at 8.8% with 3.4 days-to-cover is manageable. Institutional ownership data unavailable from this feed.
KEY RISK
Thesis invalid on close below \$31.50 (50-day MA area) or if Q4 print shows enterprise spending deceleration; Technology sector lagging creates macro headwind - need sector rotation to sustain breakout.

Strong RS at +79.8% with RS line at new high, volume contracting 28.5%, and base_tight of 2.81 is acceptable. Earnings catalyst in 22 days provides potential trigger. However, Technology sector is the worst-performing (-4.3%) creating significant macro headwind, and EXTR's inconsistent beat history reduces confidence in earnings catalyst. Strongest bear case: enterprise IT spending slowdown would directly impact bookings. Conviction: Medium.

Target: \$52 (18% measured move based on base depth)

Stop: \$40.00 (base low, ~7.6% risk)

CATALYST INTELLIGENCE

EARNINGS

July 22 - Street expects ~\$0.50 EPS. However, forward EPS of \$2.13 vs TTM of \$3.45 suggests Street sees margin normalization - a potential negative surprise risk. Earnings growth at -26.5% reflects difficult comps. ROE of 35.9% is exceptional for energy services.

BUSINESS & POSITION

Oceaneering provides engineered services and products to the offshore energy industry, including remotely operated vehicles (ROVs), subsea hardware, and umbilicals. The company also has growing exposure to defense and aerospace through its government segment providing unmanned systems and engineering services.

FACTOR & THEME

Direct exposure to offshore energy capex recovery as deepwater projects resume globally and defense spending on unmanned systems. Energy sector is strong (+2.5% 20d). Peer read-through: SLB and HAL have guided to improving offshore activity; OII's ROV fleet utilization should benefit.

NEWS FLOW

Government segment has been winning defense contracts for underwater systems. Offshore rig count recovery continues. No major contract announcements in last 60 days but backlog remains strong. Catalyst: Earnings in 8 days - High Impact given imminent timing and margin uncertainty.

INSTITUTIONAL

48.4% volume contraction is excellent, suggesting quiet accumulation. No insider activity in last 60 days. Short interest at 8.4% with 5 days-to-cover is moderate. The dual offshore/defense exposure provides unique positioning.

KEY RISK

Thesis invalid on close below \$40.00 (base low) or if Q2 shows ROV utilization decline; forward earnings decline of -26.5% creates risk of multiple compression if miss occurs.

Volume contraction of 48.4% is strong, RS line at new high, Energy sector providing tailwind, and earnings catalyst in just 8 days. However, base_tight at 4.94 is loose (above 2.0 threshold), only 11 days in base, and Street expects -26.5% earnings decline which creates downside risk. Strongest bear case: offshore capex is cyclical and could reverse on commodity weakness. Conviction: Medium.

Stop: \$25.50 (base low, ~4.6% risk)

CATALYST INTELLIGENCE
EARNINGS
July 22 - Street expects ~\$0.60 EPS on continued NIM stability. Forward P/E of 11.1x is attractive for a 19% ROE bank. 21.3% earnings growth reflects operating leverage. Beat history has been consistent.
BUSINESS & POSITION
First BanCorp is the second-largest bank holding company in Puerto Rico with ~\$19B in assets, providing commercial and consumer banking services across the island and the US Virgin Islands. The company benefits from limited competition post-consolidation and ongoing Puerto Rico economic recovery.
FACTOR & THEME
Direct exposure to Financials sector leadership (+4.9% 20d) and Puerto Rico infrastructure rebuild tailwinds. Regional bank theme has recovered from 2023 crisis - FBP's PR focus insulates from mainland deposit competition concerns.
NEWS FLOW
No major news in last 60 days. Puerto Rico economic indicators continue improving. FEMA infrastructure spending flowing through local economy. Catalyst: Earnings in 8 days - High Impact given imminent timing and sector tailwind.
INSTITUTIONAL
51.9% volume contraction is excellent - clear accumulation pattern. No insider activity in last 60 days. Short interest low at 6.1% with only 3.4 days-to-cover. Financials sector rotation provides incremental buyer flow.
KEY RISK
Thesis invalid on close below \$25.50 (base low) or if NIM compression accelerates; Puerto Rico concentration creates geographic/hurricane risk - single-market dependency.

Excellent volume contraction of 51.9%, RS line at new high, within 0.8% of pivot, and earnings catalyst in 8 days with sector tailwind. However, base_tight at 3.71 is loose (above 2.0 A-grade threshold), and RS vs SPY of +9.8% shows modest outperformance - not category leadership. Strongest bear case: Puerto Rico geographic concentration and potential NIM pressure if Fed cuts rates. Conviction: Medium.

CATALYST INTELLIGENCE

EARNINGS

REPORTED

At 52W high but base_tight of 8.6 is far too loose - this is a momentum extension, not a proper VCP. Only 5 days in base and 13.6% volume contraction is insufficient. Last earnings was April 29 - no near-term catalyst identified. Energy sector is strong (+2.5%) but setup quality is poor. Monitor for proper base formation. Conviction: Low.

CATALYST INTELLIGENCE
EARNINGS
REPORTED

Monster RS at +86.5% vs SPY with RS line at new high, but structural quality is poor: base_tight 5.56 is loose, only 9 days in base, and beta of 3.83 makes this extremely volatile. No earnings catalyst until ~Q3 (last reported May 5). Technology sector lagging at -4.3%. Tiny float of 9.4M with 22% short interest creates squeeze potential but also violent reversals. 72% gross margins and profitability are impressive, but setup needs time to coil. Conviction: Low.

CATALYST INTELLIGENCE

EARNINGS

August 5

Excellent volume contraction of 58.9% and tight base (1.86), but RS line is NOT at new high - critical VCP requirement missing. RS vs SPY of only +6.6% shows no leadership. Company is operating-margin negative (-57.3%) and essentially pre-profit. Forward P/E of 3,124x is meaningless. No catalyst until August 5. Structural tightness is good but relative strength disqualifies from A/B consideration. Conviction: Low.

CATALYST INTELLIGENCE
July 30

At pivot (0.2% away) with strong RS, but this is NOT a VCP setup: base_tight of 9.8 is extremely loose, only 2 days in base, and volume contraction of 2.6% is negligible (vol_dryup_strict is false). This is a momentum extension at highs, not a proper consolidation. 15.9% short interest creates squeeze potential but setup quality is poor. Earnings in 16 days but need proper base formation first. Conviction: Low.

CATALYST INTELLIGENCE

EARNINGS

August 6

Strong RS at +76.1% and Healthcare sector is leading (+3.5%), but setup quality is poor: base_tight 5.4 is loose, only 4 days in base, vol_dryup_strict is false (showing 2,720K 3,052K increase in most recent week). Revenue growth is negative (-2.6%) and company is unprofitable. 19.1% short interest and analyst target of \$35.46 (23% below current price) suggest Street skepticism. Structural issues disqualify despite strong momentum. Conviction: Low.

ENTRY TRIGGER

Close above \$45.82 on volume >130% of 20-day avg (>4.0M shares)

Target: \$55 (20% measured move)

Stop: \$42.00 (recent support, ~8% risk)

EARNINGS

REPORTED

RS line technically at new high but RS vs SPY is NEGATIVE (-1.8%) - underperforming the market despite being near 52W highs. Pre-revenue biotech (P/S of 4,144x is meaningless) with 20.1% short interest and no near-term earnings catalyst (last reported May 5). Clinical-stage binary risk makes this a binary event play, not a VCP setup. Healthcare sector is strong but this is not showing relative leadership. Need to identify forward clinical catalyst to upgrade. Conviction: Low.
