ANALYSIS
CATALYST / TODAY'S DRIVER
Stock breaking out on 2.69x volume with RS line at new high, 94.6% to 52W high, and textbook-tight 2.58 base - classic technical setup. Forward catalyst path: likely Phase 3 data readout or FDA submission milestone in coming months (next earnings already passed May 5); check pipeline calendar for PDUFA dates or pivotal trial interim analyses. Healthcare sector leading this week (+8.8%).
BUSINESS & POSITION
Trevi Therapeutics is a clinical-stage biotech developing therapies for chronic pruritus (severe itching) and neurological disorders; lead candidate Haduvio targets pruritus associated with chronic kidney disease. Category is niche but addresses high unmet need with potential for orphan/fast-track designation.
FACTOR & THEME
Healthcare sector momentum (+8.8% vs SPY) and biotech risk-on rotation. Trevi taps the 'orphan drug / rare disease' theme where smaller biotechs can secure premium valuations on FDA approval or partnership. Theme momentum: accelerating this week with sector leadership.
BREAKOUT SIGNAL
Close above \$19.07 on vol >269% of 20d avg, RS line new high, prox_52w 94.6%
INSTITUTIONAL
Volume 2.69x on a clean breakout with 118.8M float suggests institutional accumulation, not retail - this size float requires real money to move. No insider buying in last 60 days; institutional ownership data not available from this feed. RS line at new high is Quillamaggie's #1 early leader signal, indicating institutions are chasing relative strength.
EARNINGS
REPORTED
EARNINGS CONTEXT
Already reported May 5 (73 days ago); next print likely Oct/Nov 2026. Consensus and beat history not provided, but the 94.6% proximity to 52W high post-earnings suggests the last print was clean or guidance was raised.
KEY RISK
Thesis invalid on a close back below \$17.50 (approximate pivot/base breakout), or on any negative clinical trial update (interim futility analysis, safety hold, or partnership collapse). With no imminent earnings and 2.71B mkt cap, the next catalyst is pipeline-driven - a failed readout or competitor data superiority collapses the premium. Base_tight at 2.58 is slightly above the <2.0 VCP ideal, so coil discipline was marginal.
ANALYSIS
Four A-grade criteria met: vol >2.5x, prox_52w >85, rs_line_new_high true, base_tight <3.0 (marginal but acceptable at 2.58). Healthcare sector leadership this week (+8.8%) and RS line at new high confirm institutional sponsorship. Strongest disconfirming evidence: the forward catalyst is unclear (earnings already passed, next pipeline event not dated in this data) - being early without a catalyst is the same as being wrong. However, the technical setup is pristine and sector tailwind is live; in a risk-on regime this would be high conviction, but mixed macro and lack of a dated forward catalyst reduce it. Conviction: Medium.
Signal: Close above \$19.07 on vol >269% of 20d avg, RS line new

ANALYSIS
CATALYST / TODAY'S DRIVER
Tight VCP-style coil (base_tight 2.08, near textbook <2.0) breaking out on 2.1x volume with RS line at new high and 96.9% to 52W high. Forward catalyst: Aug 10 earnings (24d) plus likely pipeline updates (trial data, partnership, or FDA milestone) - biotech at this stage typically has a defined catalyst calendar; check for PDUFA or interim analysis dates. Healthcare sector leading (+8.8%).
BUSINESS & POSITION
Sionna Therapeutics is a clinical-stage biotech focused on precision immunology and oncology, developing therapies that modulate immune responses to treat cancer and autoimmune diseases. Small 16.8M float amplifies volatility; category is competitive but high-value if pivotal data is positive.
FACTOR & THEME
Healthcare sector leadership (+8.8% vs SPY this week) and biotech risk-on theme. Sionna taps the precision medicine / immuno-oncology wave, where positive Phase 2/3 data can re-rate a stock 50-100% overnight. Theme momentum: accelerating with sector rotation into Healthcare.
BREAKOUT SIGNAL
Close above \$49.41 on vol >210% of 20d avg, RS line new high, base_tight 2.08
INSTITUTIONAL
Volume 2.1x on a tiny 16.8M float is institutional - even modest fund accumulation moves the stock. No insider buying in last 60d; institutional ownership data not available. RS line at new high confirms early institutional sponsorship. Base_tight at 2.08 is near the 2.0 VCP threshold, indicating tight supply absorption (classic institutional pattern).
EARNINGS
EARNINGS IN 24D
EARNINGS CONTEXT
Next print Aug 10 (24 days). Consensus and beat history not provided; biotech earnings often matter less than pipeline updates. The 96.9% proximity to 52W high and RS line new high suggest market is anticipating positive news at or before the print.
KEY RISK
Thesis invalid on a close back below \$46.00 (approximate base pivot), or on any negative trial update (safety signal, enrollment delay, or futility). With a 16.8M float, downside volatility is as extreme as upside - a failed readout or competitor superiority can erase 40%+ in a session. Earnings in 24d is a binary event; position sizing must reflect this.
ANALYSIS
Five A-grade criteria met: vol >2x, prox_52w >85, rs_line_new_high true, base_tight 2.08 (nearly textbook VCP), and Healthcare sector leadership (+8.8%). Tiny 16.8M float amplifies institutional buying power. Strongest disconfirming evidence: RS vs SPY is only +8.5 (modest relative strength) and earnings in 24d introduces binary risk - if the print or pipeline update disappoints, the small float collapses. Mixed macro regime and lack of insider buying lower conviction from high to medium. Conviction: Medium.

ANALYSIS
CATALYST / TODAY'S DRIVER
Multi-day 100%+ rally driven by technical squeeze on tiny 11.7M float; at literal 52W high with RS line at new high. Forward catalyst: Aug 4 earnings (18d) - if guidance shows path to profitability or partnership announcement, move extends; sector momentum (+8.8% vs SPY) is strongest this week.
BUSINESS & POSITION
American Well operates a telehealth platform connecting patients with physicians via video visits; competes with Teladoc and MDLive in a maturing but still-growing virtual care market. The company has struggled with profitability but tiny float creates explosive volatility on any positive catalyst.
FACTOR & THEME
Healthcare sector leadership (+8.8% vs SPY this week) plus digital health theme; pandemic telehealth adoption plateau has been a headwind, but any sign of cost discipline or new enterprise wins re-rates the story. Theme momentum: neutral to slight positive on healthcare rotation.
BREAKOUT SIGNAL
Close above \$13.23 on vol >380% of 20d avg, RS line new high confirmed
INSTITUTIONAL
Volume 3.8x average on 20%+ move signals institutional block activity, not just retail chase - with an 11.7M float, even modest fund buying moves the needle. No insider buying in last 60d; institutional ownership data not available from this feed (recommend 13F cross-check), but extreme float turnover (likely >50% rotated in 2-3 days) suggests new money entering.
EARNINGS
EARNINGS IN 18D
EARNINGS CONTEXT
Next print Aug 4 (18 days). Historical beat/miss and consensus EPS/revenue not provided in data; given the 111% 3M RS, market is pricing in either a beat or transformational guidance - bar is high. Serial beat history would justify follow-through; serial miss makes this a gamma squeeze only.
KEY RISK
Thesis invalid on any close back below \$11.50 (prior resistance/base breakout), or on negative pre-announcement ahead of Aug 4 print. With 99.8% proximity to 52W high and 6.56 base_tight (very wide coil), this is extended - a guidance miss or macro risk-off event collapses it 30%+ in hours given the tiny float.
ANALYSIS
RS line at new high, healthcare sector leadership, and 3.8x volume on a tiny float are A-grade ingredients, but the 6.56 base_tight (well above the 2.0 VCP threshold) and 18-day proximity to a binary earnings event downgrade this to B. Strongest disconfirming evidence: the base was wide and sloppy, not institutional-quality, and the stock is now fully extended into a known event - this is a momentum chase, not an early-stage breakout. Earnings in 18d is the ONLY forward catalyst; if that disappoints, no floor exists. Mixed macro regime further reduces conviction. Conviction: Medium.

Analysis
Catalyst / Today's Driver Breaking out to new 52W high (99.7%) on 2.68x volume with RS line at new high - technical leadership in Energy sector (+8.5% vs SPY this week). Forward catalyst: Aug 7 earnings (21d) - if guidance reflects strong refining margins or renewable diesel ramp, move extends; Energy is second-strongest sector this week, providing tailwind.
Business & Position Calumet is a specialty chemicals and renewables producer, operating refineries that produce lubricants, solvents, and renewable diesel; exposed to refining crack spreads and the energy transition via renewable product mix. The company is repositioning toward higher-margin specialty and renewable streams.
Factor & Theme Energy sector leadership (+8.5% vs SPY) and energy transition theme (renewable diesel exposure). Calumet benefits from tight refining capacity and any policy support for domestic renewables. Theme momentum: accelerating this week with sector outperformance.
Breakout Signal Close above \$42.83 on vol >268% of 20d avg, RS line new high, at 52W high
Institutional Volume 2.68x on a 58.4M float indicates institutional buying; no insider activity in last 60d. Institutional ownership data not available from this feed. RS line at new high is the key signal - institutions are pushing this to leadership, not waiting for confirmation. The move into earnings (21d away) suggests positioning ahead of a potential beat.
Earnings Earnings in 21D
Earnings Context Next print Aug 7 (21 days). Consensus EPS/revenue and beat history not provided; the 99.7% proximity to 52W high and 28% RS vs SPY suggest market is pricing in a strong quarter or guidance raise. If Calumet has a history of beats, this setup has edge; if it's a serial misser, the setup is a trap.
Key Risk Thesis invalid on a close back below \$40.00 (approximate breakout pivot), or on any negative pre-announcement or crude/margin weakness ahead of Aug 7 print. Base_tight at 3.96 is wide (well above 2.0 VCP threshold), indicating the coil was loose and not institutional-quality - this increases failure risk. Energy sector rotation can reverse quickly on macro headlines.
Analysis RS line at new high, 99.7% to 52W high, 2.68x volume, and Energy sector leadership (+8.5%) are strong, but the 3.96 base_tight disqualifies it from A-grade (coil was too wide, not VCP-quality). Forward catalyst is clear (Aug 7 earnings in 21d), but proximity to the event introduces binary risk. Strongest disconfirming evidence: wide base and lack of insider buying suggest the setup is not institutional-quality despite the technical breakout. Mixed macro regime reduces conviction on all breakouts. Conviction: Medium.
Signal: Close above \$42.83 on vol >268% of 20d avg, RS line new Vol vs Avg: 2.68x

Setup Metrics	
Price	\$67.49

Vol vs Avg	1.98x
RS Line Hi	YES
Above 50MA	-
Fwd P/E	-
Short %	-
Days to Cover	-
Inst. Own	-(data lag)

Analysis
Catalyst / Today's Driver
Explosive move (67% RS vs SPY, 99.5% to 52W high) on 1.98x volume with RS line at new high - rare for a restaurant stock to show this degree of relative strength. Forward catalyst: July 30 earnings (13d) - if same-store sales and margin guidance beat, consumer recovery thesis confirms and move extends; watching for traffic vs. pricing mix commentary.
BUSINESS & POSITION
BJ's Restaurants operates casual dining establishments (pizza, burgers, craft beer) across the U.S.; competes in a saturated category but has brand loyalty and potential for unit expansion. The 67% RS vs SPY suggests either a short squeeze, cost structure turnaround, or activist/M&A speculation.
Factor & Theme
Consumer recovery theme; if this print shows resilient traffic despite macro concerns, it signals the consumer is healthier than feared and boosts all casual dining names. Not in a leading sector (Consumer Cyclical is neutral), but the extreme RS suggests stock-specific catalyst or positioning ahead of earnings beat.
BREAKOUT SIGNAL
Close above \$67.49 on vol >198% of 20d avg, RS line new high, at 52W high
INSTITUTIONAL
Volume 1.98x on a 19.4M float is institutional, not retail - casual dining typically trades thin, so 2x volume is significant. No insider buying in last 60d; institutional ownership data not available. RS line at new high is the key: institutions are making BJRI a leadership position in the restaurant space, rare for a legacy casual diner. Likely either a large fund building or short covering ahead of earnings.
EARNINGS
EARNINGS IN 13D
EARNINGS CONTEXT
Next print July 30 (13 days). Consensus EPS/revenue and beat/miss history not provided; the 67% RS vs SPY and 99.5% proximity to 52W high suggest market is pricing in a material beat or guidance raise. If BJRI has a history of beats (4 quarters in a row), this is high-probability follow-through; if not, it's a squeeze into earnings.
KEY RISK
Thesis invalid on a close back below \$62.00 (approximate pivot), or on any same-store sales miss or negative guidance at July 30 print. Base_tight at 3.46 is wide (not VCP-quality), and earnings in 13 days is imminent binary risk - if the print disappoints, the stock gaps down 15-20% overnight given the 19.4M float and overbought technicals. Consumer spending data (retail sales, credit card trends) turning negative would also invalidate.
ANALYSIS
RS line at new high, 67% RS vs SPY (extreme), 99.5% to 52W high, and 1.98x volume are all strong, but the 3.46 base_tight (wide coil, not VCP) and 13-day proximity to binary earnings downgrade from A to B. Strongest disconfirming evidence: restaurants rarely sustain this degree of relative strength without a takeover bid or restructuring catalyst - this could be a gamma squeeze or short cover into earnings, not durable institutional accumulation. If earnings disappoint, the setup fails violently. Conviction: Low-Medium.
Signal: Close above \$67.49 on vol >198% of 20d avg, RS line new
Vol vs Avg: 1.98x

ANALYSIS
CATALYST / TODAY'S DRIVER
Textbook VCP coil (base_tight 1.71, best in the scan) breaking out on 1.56x volume, 94.8% to 52W high, and +29.6% RS vs SPY. Forward catalyst: Aug 10 earnings (24d) likely brings pipeline update - check for Phase 2/3 trial interim data, partnership announcements, or FDA Fast Track designation; dermatology biotech category has high M&A activity (AbbVie, LEO, Galderma all active acquirers).
BUSINESS & POSITION
Oruka Therapeutics is a clinical-stage biotech developing long-acting biologics for chronic skin diseases (psoriasis, atopic dermatitis); differentiation is extended dosing intervals (quarterly vs. monthly for competitors like Humira, Dupixent). Category is crowded but large TAM, and Oruka's dosing advantage could command partnership or acquisition premium.
FACTOR & THEME
Healthcare sector leadership (+8.8% vs SPY this week) and biotech risk-on theme. Dermatology is a proven category with multiple blockbuster precedents; Oruka's extended-release platform taps into patient convenience and compliance trends. Theme momentum: accelerating with Healthcare rotation.
BREAKOUT SIGNAL
Close above \$92.70 on vol >156% of 20d avg, base_tight 1.71 VCP coil
INSTITUTIONAL
Volume only 1.56x (below the 2x threshold for A-grade) but base_tight 1.71 is the tightest in the entire scan - this is a silent-build pattern where institutions absorbed supply without spiking volume (classic accumulation). No insider buying in last 60d; institutional ownership data not available. RS line NOT at new high is the key downgrade factor - institutions have NOT yet confirmed this as a leadership position despite the strong setup.
EARNINGS
EARNINGS IN 24D
EARNINGS CONTEXT
Next print Aug 10 (24 days). Consensus EPS/revenue not provided; for a clinical-stage biotech, the earnings number itself is irrelevant - the call will focus on trial enrollment, data timelines, and cash runway. The 94.8% proximity to 52W high suggests market is anticipating positive pipeline news.
KEY RISK
Thesis invalid on a close back below \$86.00 (approximate pivot from the VCP base), or on any negative trial update (enrollment delay, adverse event, or competitor data superiority). With 51.1M float and \$5.59B mkt cap, this is less volatile than the micro-cap biotechs but still binary on pipeline outcomes. Earnings in 24d is the next catalyst window; lack of positive news there stalls the move.
ANALYSIS
Best base_tight in the scan (1.71, textbook VCP) and 94.8% to 52W high are A-grade quality, but RS line NOT at new high and volume only 1.56x (below 2x) downgrade to B. Strongest disconfirming evidence: the RS line not confirming new high means institutions have not yet designated this a leadership position - it's setting up but not yet breaking out with conviction. Healthcare sector tailwind (+8.8%) and forward catalyst (Aug 10 earnings/pipeline update in 24d) support follow-through if the print is clean. Mixed macro lowers conviction. Conviction: Medium.
Signal: Close above \$92.70 on vol >156% of 20d avg, base_tight
Vol vs Avg: 1.56x
