CATALYST INTELLIGENCE

EARNINGS

Jul 28 - Street expects ~\$1.05 EPS on ~\$925M revenue. Serial beater with 4/4 quarters exceeding consensus over past year; last quarter beat by 8% on EPS with raised FY guidance. Management has guided to margin expansion from labor productivity and menu optimization.

BUSINESS & POSITION

Operates ~350 upscale casual dining restaurants across Cheesecake Factory, North Italia, and Flower Child brands, plus a licensing business for international expansion and CPG bakery sales. Category leader in polished casual with industry-leading unit economics (~\$11M AUV) and a differentiated multi-brand portfolio targeting different dayparts and demographics.

FACTOR & THEME

Direct play on consumer discretionary recovery and experiential spending normalization post-pandemic; benefits from stable labor inflation and food cost deflation in 2026. Peer read-through positive: Darden (DRI) and Texas Roadhouse (TXRH) breakouts confirmed casual dining strength; Financials sector leadership (+5.9%) historically correlates with consumer confidence.

NEWS FLOW

No major corporate announcements in last 30 days; quiet accumulation phase. Index inclusion catalyst: Russell 1000 rebalance completed in June with no changes to CAKE status. Industry catalyst (Med): NRA data showing casual dining traffic +3% YoY through June supports sector momentum heading into Q2 print.

INSTITUTIONAL

Volume dry-up with price holding at 52W highs signals institutional accumulation into the base - classic supply/demand absorption pattern. The 33.7% short interest with 7.2 days-to-cover creates asymmetric squeeze potential on any positive earnings surprise; shorts are funding the breakout fuel. No insider activity in last 60 days - baseline for this setup.

KEY RISK

Thesis invalid on a close below \$79.50 (base low), or if Q2 guidance disappoints on labor cost headwinds or traffic deceleration. High debt/equity (466%) limits financial flexibility in a recession scenario; 33.7% short interest reflects legitimate bear concern on consumer spending sustainability.

Strong RS line at new high with earnings catalyst in 18 days and serial beat history creates compelling setup. However, base_tight at 3.52 is looser than A-grade standard (<2.0), and vol dry-up is marginal (7% contraction, week-over-week pattern flat). The 33.7% short interest is a double-edged sword - squeeze fuel but also reflects real bear thesis on consumer durability. Strongest disconfirming argument: consumer discretionary lagging in current rotation, and analyst price target of \$68.40 suggests Street sees limited upside. Conviction: Medium.

Close above \$61.21 on volume >175% of 20-day avg (600K+ shares)
Target: \$72.00 (measured move: base depth ~\$3 added to pivot, plus extension toward prior 2022 highs)
Stop: \$58.50 (base low, ~4.5% risk from pivot)

CATALYST INTELLIGENCE
EARNINGS
Aug 11 - Street expects ~\$1.60 EPS, trailing PE of 11.3x vs forward 9.2x implies 23% earnings growth priced in. Strong ROE of 18% with 35.9% net margins demonstrates operational excellence. Limited analyst coverage creates potential for positive surprise asymmetry.
BUSINESS & POSITION
Peru's largest financial services conglomerate controlling Interbank (4th largest bank), Interseguro (leading insurer), and Inteligo (wealth management), serving 8M+ customers across banking, insurance, and asset management. Category leader in Peruvian financial services with dominant retail banking position and expanding digital penetration.
FACTOR & THEME
Pure play on Peruvian economic expansion and financial inclusion; benefits from copper price strength supporting Peru's commodity-driven GDP. Financials sector leadership (+5.9%) in current regime is a direct tailwind. Low beta (0.54) provides defensive characteristics while delivering growth-like returns (+37% earnings growth).
NEWS FLOW
No material corporate news flow in last 60 days; quiet consolidation. Peru's central bank held rates steady in June, supporting credit demand outlook. Copper prices +12% YTD provide macro tailwind to Peruvian economy and IFS's commercial banking book.
INSTITUTIONAL
Textbook institutional accumulation pattern: 59% volume contraction with price holding within 1% of 52W high demonstrates patient large-block buying absorbing all supply. Thin float (29.5M shares) means breakout volume will be amplified. No insider activity in last 60 days. Low short interest (1.5%) removes squeeze mechanics but confirms minimal crowded positioning.

KEY RISK
Thesis invalid on a close below \$58.50 (base low), or on Peruvian sol devaluation >5% vs USD which would compress USD-denominated earnings. Single-country concentration risk; Peru political instability or copper price collapse would impair fundamentals directly.
Near-textbook VCP structure with strict vol dry-up, RS line at new high, and price coiled within 1% of pivot. Financials sector leadership aligns perfectly with theme. However, base_tight at 3.38 is above A-grade threshold, earnings catalyst is 32 days out (too far for immediate trigger), and thin US coverage/liquidity creates execution risk. Strongest disconfirming argument: EM financial exposure carries tail risk from Peru political instability and USD strength - one headline can unwind the setup. Conviction: Medium.

Close above \$133.63 on volume >150% of 20-day avg (1.8M+ shares)

Target: \$155.00 (measured move from base plus extension to 2024 high zone)

Stop: \$128.50 (base low, ~4% risk from pivot)

CATALYST INTELLIGENCE

EARNINGS

Jul 30 - Street expects ~\$3.50 EPS on ~\$1.1B revenue. Forward PE of 9.1x on \$14.52 FY EPS implies significant earnings recovery from TTM loss. HEYDUDE turnaround is the swing factor - investors watching for stabilization in that segment after 2025 struggles.

BUSINESS & POSITION

Global leader in casual foam footwear with iconic Crocs clogs (~\$3B revenue) plus HEYDUDE casual canvas brand acquired in 2022. Category creator and leader in molded casual footwear with 70%+ brand awareness globally; HEYDUDE integration remains the growth optionality lever.

FACTOR & THEME

Consumer discretionary exposure with defensive characteristics from product positioning (value-oriented price points, essential wardrobe item). Benefits from casualization trend and athleisure durability. Peer read-through mixed: Deckers (DECK) strong, but footwear broadly volatile on inventory concerns.

NEWS FLOW

Limited news flow; HEYDUDE brand reset continues with inventory rationalization. No major product launches announced. Industry catalyst (Med): Back-to-school season approaching provides near-term demand catalyst for core Crocs brand.

INSTITUTIONAL

Volume contraction is soft (not strict dry-up) but price holding at 52W high with RS line confirming strength. The 14.6% short interest with 4.2 days-to-cover provides squeeze fuel if HEYDUDE turnaround shows progress in Q2 print. No insider activity in last 60 days.

KEY RISK

Thesis invalid on a close below \$128.50 (base low), or if HEYDUDE segment posts another revenue decline >10% YoY indicating brand impairment. High beta (1.55) means setup will get hit hard in any risk-off rotation; negative TTM EPS reflects real execution challenges.

RS line at new high and price coiled within 0.6% of pivot with earnings in 20 days creates actionable setup. However, vol dry-up is soft (not strict), HEYDUDE turnaround remains unproven (strongest disconfirming argument), and negative TTM EPS means this is a show-me story. Street price target of \$126 below current price reflects skepticism. Conviction: Medium.

Target Pr.	\$51.31

ENTRY TRIGGER
Close above \$54.51 on volume >150% of 20-day avg (5.4M+ shares)
Target: \$65.00 (measured move toward prior 2024 highs, ~20% upside)
Stop: \$51.50 (base low, ~5.5% risk from pivot)

CATALYST INTELLIGENCE
EARNINGS
Last reported Jun 17 with mixed results. Street expects FY26 EPS of ~\$3.03 (forward PE 17.6x). PEG of 0.51 suggests value if earnings recovery materializes. Beat/miss pattern has been inconsistent - not a serial beater.
BUSINESS & POSITION
Nation's largest used vehicle retailer with ~250 stores, omnichannel capability, and captive finance arm (CarMax Auto Finance). Category leader with ~4% market share of a highly fragmented \$1T+ used car market; competitive moat from scale, brand trust, and proprietary auction/reconditioning infrastructure.
FACTOR & THEME
Consumer cyclical with credit sensitivity; benefits from used car price stabilization after 2022-2024 volatility and improving auto loan availability. Interest rate cuts would directly benefit CAF margins and consumer affordability. Peer read-through: AutoNation (AN) and Lithia (LAD) have shown improving used vehicle margins.
NEWS FLOW
Reported Q1 on Jun 17 with results meeting low expectations; no subsequent corporate catalysts. Industry catalyst (Med): Fed rate trajectory remains the dominant driver - any dovish pivot accelerates used car financing demand. Russell inclusion stable; no near-term index events.
INSTITUTIONAL
SIGNIFICANT INSIDER ACTIVITY: 5 open-market buys by 4 distinct insiders totaling \$770K in last 60 days - a strong cluster signal (insider_cluster = 10). This is institutional-quality conviction from people with information advantage. Volume dry-up is textbook (55% contraction) with price holding, confirming accumulation. The 12% short interest provides squeeze fuel on any positive catalyst.

KEY RISK
Thesis invalid on a close below \$51.50 (base low), or if used vehicle prices resume decline >5% per Manheim Index indicating margin compression. High debt/equity (308%) creates balance sheet risk in recession; RS line NOT at new high suggests relative weakness vs market.
INSIDER CLUSTER SIGNAL UPGRADE CONSIDERATION: 5 buys / \$770K from 4 insiders is a top-tier conviction indicator. However, RS line NOT at new high is a critical technical flaw - the stock is lagging the market despite insider conviction. No imminent earnings catalyst (reported Jun 17, next print likely September). Base_tight at 2.76 is acceptable but not prime. Strongest disconfirming argument: prox_52w at only 80.6% means stock is rebuilding from significant drawdown, not leading. Would upgrade to A with RS line confirmation; for now B reflects structural incompleteness despite insider signal. Conviction: Medium-High on insider conviction, but technical setup not yet A-grade.

EARNINGS

Aug 05

Exceptional fundamentals (55% net margin, 78% rev growth) but Energy sector lagging (-3.6%) and RS line NOT at new high despite price near 52W high. Forward EPS of \$6.44 vs TTM \$10.98 implies earnings normalization - peak cycle concern. Negative beta (-0.1) is unusual and may indicate data issue. Monitor for sector rotation. Conviction: Low.

EARNINGS

Aug 04

7.4% to pivot is too far for imminent trigger - needs 2-3 more weeks of consolidation. Base_tight at 5.41 is loose. RS line NOT at new high despite strong +41% RS vs SPY. Revenue growth of 41% is compelling but trailing PE of 73x reflects full valuation. Early-stage setup; monitor for tightening. Conviction: Low.

EARNINGS

REPORTED

Energy sector lagging (-3.6%) is direct headwind. RS line NOT at new high, prox_52w at only 87.9%. No near-term earnings catalyst (reported May 19). Interesting hydrogen/ammonia shipping theme but setup is early-stage technically. Monitor for sector rotation into energy transition names. Conviction: Low.
