Analysis
Catalyst / Today's Driver Stock is pressing within 0.7% of 52-week high after 9.5% surge, driven by strong relative strength in biotech diagnostics. Forward catalyst: November 4 earnings print with potential to break out on guidance for immune-medicine partnerships or MRD (minimal residual disease) commercialization progress.
Business & Position Adaptive Biotechnologies develops immune-driven medicine using next-generation sequencing to decode the adaptive immune system. The company's clonoSEQ platform is FDA-cleared for minimal residual disease testing in blood cancers, with expanding partnerships in pharma (Genentech) and immunosequencing applications.
Factor & Theme Direct exposure to precision medicine tailwinds - MRD testing becoming standard-of-care in oncology, and immune profiling gaining traction in drug development. Biotech sector rotation accelerating as market rewards commercial-stage platforms with recurring revenue models.
Breakout Signal Close above \$27.14 on vol >1.5x of 20d avg
Institutional Volume at 1.51x is modest for a 9.5% move, suggesting potential retail FOMO rather than institutional block accumulation. No insider buying in last 90 days is a notable absence given proximity to 52W highs. Float of 125M allows for rotation but lacks the tight supply dynamics of elite momentum setups.
Earnings Earnings in 50D
Earnings Context Next print November 4. Company has been unprofitable but revenue growth trajectory and partnership milestones are the key metrics. Last few quarters showed mixed results with pharma partnership revenue lumpy. Market will focus on clonoSEQ adoption trends and any new pharma collaborations.
Key Risk Thesis invalid on a close back below \$25.00 (approximate base support), or if November 4 earnings show deceleration in clonoSEQ clinical adoption or loss of a key pharma partnership.
Analysis At 99.3% of 52W high with exceptional 12-week RS of +56.4, ADPT is a near-breakout leader in precision medicine. Strongest disconfirming evidence: RS line NOT at new high despite price near peak, and volume surge is tepid (1.51x) for a 9.5% move, indicating weak institutional participation. Base is looser than ideal (2.66 vs <2.0 threshold). In a mixed regime with no insider buying and earnings 50 days out, this is a strong B-grade follow-through candidate but lacks the technical confirmation (RS line new high, vol >2x) for A-grade conviction. Conviction: Medium.
Signal: Close above \$27.14 on vol >1.5x of 20d avg Vol vs Avg: 1.51x

Analysis
Catalyst / Today's Driver Breakout from textbook VCP coil (base_tight 1.58) at 92% of 52-week high, riding sector tailwind (Energy +4.7% vs SPY this week). Forward catalyst: November 4 earnings with potential upside from higher oil/gas CapEx spending and energy service demand as WTI stabilizes above \$70.
Business & Position DNOW is a leading distributor of energy and industrial products, serving upstream oil & gas, midstream pipelines, and downstream refining. The company provides supply-chain solutions and equipment to energy operators, levered to North American drilling activity and global energy infrastructure spending.
Factor & Theme Direct play on energy sector rotation, which is leading the market this week (+4.7% vs SPY). Benefits from reshoring of industrial supply chains and sustained oil/gas CapEx as energy companies prioritize reliability over cost-cutting. Theme momentum accelerating with crude stable and natural gas demand rising into winter.
Breakout Signal Close above \$15.90 on vol >1.5x of 20d avg
Institutional Volume only 1.51x on a 1.69% move suggests quiet accumulation rather than panic buying - consistent with textbook base-building. Large float (177.7M) requires sustained institutional participation for follow-through. No insider buying in last 90 days, but the tight base (1.58) and sector leadership provide technical confirmation of smart-money positioning.
Earnings Earnings in 50D
Earnings Context Next print November 4. DNOW is cyclically levered to energy CapEx; consensus will focus on order trends, backlog growth, and margin expansion as supply-chain pressures ease. Recent quarters have shown recovery in North American activity and international strength.
Key Risk Thesis invalid on a close back below \$15.00 (base support), or if WTI crude breaks below \$65 and triggers energy sector de-rating ahead of November earnings.
Analysis DNOW exhibits textbook VCP setup: base_tight 1.58 (best in the list), prox_52w 92.1, and riding the week's strongest sector (Energy +4.7%). Strongest disconfirming evidence: RS line not at new high, RS vs SPY is solid but not exceptional (+16.7), and volume is just meeting the 1.5x threshold. In a mixed regime, energy sector leadership provides asymmetry, but the lack of RS line confirmation and no insider buying caps conviction. Solid B-grade technical setup with sector tailwind, but not yet institutional breakout quality. Conviction: Medium.
Signal: Close above \$15.90 on vol >1.5x of 20d avg Vol vs Avg: 1.51x

ANALYSIS
CATALYST / TODAY'S DRIVER
8.13% surge on 2.4x volume suggests news-driven spike, likely tied to healthcare IT sector rotation or contract/partnership win. Forward catalyst: October 28 earnings with focus on revenue-cycle management demand as hospitals accelerate automation post-reform. Additional upside if AI-driven billing solutions show adoption acceleration.
BUSINESS & POSITION
Waystar provides cloud-based revenue cycle management (RCM) software for healthcare providers, automating billing, claims management, and payment processing. The company serves hospitals, physician groups, and health systems looking to reduce administrative costs and improve cash flow in a complex payer environment.
FACTOR & THEME
Healthcare IT tailwind as providers invest in automation to offset labor shortages and margin pressure. RCM is a sticky, recurring-revenue model with high switching costs. Potential AI integration angle as billing/coding becomes AI-augmented, though theme is secondary to core operational efficiency demand.
BREAKOUT SIGNAL
Close above \$26.93 on vol >2.4x of 20d avg
INSTITUTIONAL
Volume at 2.4x (highest in the list) on an 8.13% move suggests institutional participation or algorithmic response to news. Large float (139.4M) allows for sustained accumulation, but base_tight 3.71 (widest in the list) indicates choppy, not controlled, price action. No insider buying in last 90 days is a yellow flag given recent IPO-like float dynamics.
EARNINGS
EARNINGS IN 43D
EARNINGS CONTEXT
Next print October 28. Waystar is a recent public company (2024 IPO); market is still establishing baseline expectations. Consensus will focus on revenue growth, customer adds, and margin trajectory as the company scales. Any partnership with major EHR vendors (Epic, Cerner) or payer integrations would be material catalysts.
KEY RISK
Thesis invalid on a close back below \$25.00 (pre-spike support), or if October 28 earnings show customer churn, pricing pressure from competitors (ChangeHealthcare, Availity), or slower-than-expected hospital IT spending.
ANALYSIS
WAY shows strong relative strength (+45.3 vs SPY) and the highest volume surge (2.4x) in the list, but is only 67% of 52W high with a wide base (3.71). Strongest disconfirming evidence: prox_52w 66.7 means this is early-stage recovery, not a breakout from an established base, and the wide base suggests distribution rather than accumulation over the past consolidation. In a mixed regime with no insider buying and earnings 43 days out, this is a momentum follow-through play but not a high-conviction institutional setup. Conviction: Medium.
Signal: Close above \$26.93 on vol >2.4x of 20d avg

RS Line Hi	no
Above 50MA	-
Fwd P/E	-
Short %	-
Days to Cover	-
Inst. Own	- (data lag)

Analysis
Catalyst / Today's Driver Stock approaching 52-week high (91.2% proximity) with 3.7% gain on 1.59x volume, likely driven by healthcare services rotation and AI-imaging narrative. Forward catalyst: November 5 earnings with potential upside from imaging volume recovery, DeepHealth AI platform adoption, and accretive M&A integration updates.
Business & Position RadNet is the largest operator of outpatient imaging centers in the U.S., providing MRI, CT, PET/CT, and mammography services. The company is integrating AI-driven radiology tools (DeepHealth acquisition) to improve diagnostic accuracy and workflow efficiency, positioning as a technology-enabled services play.
Factor & Theme Dual exposure: (1) healthcare services recovery as elective procedures normalize post-pandemic, and (2) AI in medical imaging as a competitive moat. RadNet's DeepHealth platform is an early-mover advantage in AI-assisted diagnostics, aligning with broader AI healthcare adoption. Theme momentum is steady but not accelerating sharply.
Breakout Signal Close above \$78.28 on vol >1.6x of 20d avg
Institutional Volume at 1.59x is modest for a 3.7% move, suggesting incremental rather than urgent buying. Float of 65.7M (smallest in the list) provides better supply/demand dynamics for squeeze potential. No insider buying in last 90 days, but strong 12-week RS (+37.4) indicates sustained institutional interest even without Form 4 activity.
Earnings Earnings in 51D
Earnings Context Next print November 5. RadNet typically beats on revenue (imaging volume trends) but margin expansion is key given labor and equipment costs. Market will focus on same-center volume growth, AI platform monetization progress, and any M&A accretion. Last few quarters showed strong volume recovery and improved profitability.
Key Risk Thesis invalid on a close back below \$74.00 (approximate 20-day MA support), or if November 5 earnings show imaging volume deceleration, reimbursement pressure from payers, or AI platform adoption stalling.
Analysis RDNT is 91.2% of 52W high with strong 12-week RS (+37.4) and the smallest float in the list (65.7M), providing supply scarcity for follow-through. Strongest disconfirming evidence: RS line not at new high, volume is tepid (1.59x) for a near-breakout move, and base is loose (2.91). In a mixed regime with no insider buying and earnings 51 days out, this is a solid B-grade setup with AI-imaging narrative and tight float, but lacks the technical confirmation for A-grade conviction. Conviction: Medium.
Signal: Close above \$78.28 on vol >1.6x of 20d avg Vol vs Avg: 1.59x
