CATALYST INTELLIGENCE

EARNINGS

Oct 08 - Street expects ~\$1.38 FY EPS on 33.7% revenue growth. Beat history mixed - company transitioned from losses to profitability recently. Forward P/E of 93x reflects growth-stage premium; P/S of 84x is elevated but justified if SiC ramp sustains. Guidance trends have been constructive with capacity expansion announcements.

BUSINESS & POSITION

Aehr designs and manufactures wafer-level burn-in and test systems used by semiconductor fabs to stress-test chips before packaging - a critical quality gate for high-reliability applications in AI accelerators, EVs, and data centers. The company holds a near-monopoly in silicon carbide (SiC) wafer-level burn-in, positioning it as a picks-and-shovels beneficiary of both AI compute and EV power electronics buildouts.

FACTOR & THEME

Direct exposure to AI infrastructure capex (accelerator reliability testing), EV/power semiconductor cycle (SiC adoption), and reshoring tailwinds as US fabs expand domestic test capacity. Sentiment in AI infrastructure remains strong with hyperscaler capex guides intact; SiC EV power module demand accelerating as legacy OEMs electrify.

NEWS FLOW

No major contract announcements in last 60 days from public sources. Key watch: SiC customer expansion beyond lead customer (likely ON Semi/Wolfspeed). Industry read-through: Wolfspeed's recent capex commentary supportive of SiC test demand. Catalyst type: Industry (SiC adoption) / Impact: High.

INSTITUTIONAL

Volume dry-up is textbook (2.37M 2.49M 3.31M contracting 28%) with RS line at new highs - signature of quiet institutional accumulation into a tight coil. No insider activity in last 60 days, which is neutral for a name at this stage. Float is tight at 30M shares; institutional ownership data unavailable from this feed. High short interest (13.9%) creates squeeze fuel if breakout triggers.

KEY RISK

Thesis invalid on a weekly close below \$115 (base low support) or if lead SiC customer delays capacity expansion. Customer concentration is the key bear case - estimated 60%+ revenue from top 2 customers creates binary risk on any order pushout.

RS line at 52W high and clean 3-week volume contraction (28%) confirm institutional interest, but base_tight of 5.63 is loose by A-grade standards - this is a volatile name that needs another 1-2 weeks to consolidate. Earnings 57 days out removes near-term catalyst urgency. Strongest disconfirming argument: extreme customer concentration means any SiC order delay could gap the stock 30%+ lower. Mega-cap leadership regime creates headwind for SMID momentum. Conviction: Medium.

CATALYST INTELLIGENCE
EARNINGS
Nov 03 - Pre-revenue biotech - earnings irrelevant except for cash burn update. Street modeling -\$1.43 FY EPS (losses). Key metric is cash runway and trial enrollment pace. No beat/miss pattern applicable.
BUSINESS & POSITION
COMPASS is developing COMP360, a proprietary synthetic psilocybin formulation paired with psychological support, targeting treatment-resistant depression (TRD). The company is a first-mover in the regulated psychedelic therapy space with Phase 3 trials underway - a binary FDA approval story with blockbuster potential if successful.
FACTOR & THEME
Pure-play psychedelic/mental health theme exposure at a time when the FDA has shown increasing openness to novel psychiatric treatments. Sentiment mixed: recent MDMA rejection by FDA created sector headwinds, but differentiated psilocybin mechanism may avoid same pitfalls. Peer read-through: MNMD and ATAI price action has been volatile but CMPS outperforming on differentiated data.
NEWS FLOW
Phase 3 COMP360 enrollment ongoing for TRD indication. No PDUFA date set yet - likely 2027 filing. Recent sector noise from FDA MDMA advisory committee rejection creates uncertainty but COMPASS differentiated. No new partnerships or financing announcements in last 60 days. Catalyst type: Corporate (Phase 3 data readout) / Impact: High (binary).
INSTITUTIONAL
Volume contracting 31% over 3 weeks with price holding near highs suggests accumulation, though RS line NOT at new high is a yellow flag - this is a base rebuild, not a leadership breakout. No insider buying in last 60 days. Short interest at 10% with 3.1 days to cover creates modest squeeze potential. Institutional data unavailable.

KEY RISK
Thesis invalid on close below \$12.00 (50-day MA and base structure low) or on any negative Phase 3 interim data readout. The strongest bear case: FDA's MDMA rejection signals broader regulatory skepticism toward psychedelics that could delay or doom COMP360 approval.

Tight vol contraction and proximity to pivot (2.7%) are constructive, but RS line NOT at new high and base_tight of 4.16 keep this from A-grade. Healthcare sector leading (+4.1% 20d) provides tailwind. No near-term catalyst (earnings 83 days, no PDUFA) means this is a positioning trade ahead of Phase 3 data. Strongest disconfirming argument: FDA's evolving skepticism on psychedelic trial design could invalidate the entire thesis regardless of efficacy data. Conviction: Medium.

ENTRY TRIGGER
Close above \$68.75 on volume >130% of 20-day avg (1.6M+ shares)
Target: \$82 (measured move; prior 2022 highs as resistance)
Stop: \$60.00 (structure low; 13% risk from pivot)

CATALYST INTELLIGENCE
EARNINGS
Nov 06 - Street expects \$4.38 FY EPS; trailing P/E 18.3x, forward 15.4x - reasonable for cyclical refiner. 47.8% revenue growth reflects margin expansion. PEG of 0.38 suggests value angle if margins sustain. Prior quarter beat history: refiners typically in-line to beat when cracks strong.
BUSINESS & POSITION
Delek operates petroleum refineries in Texas and Arkansas with ~302k bpd capacity, plus retail fuel stations and logistics assets. The company is a leveraged play on crack spreads - when refining margins expand, DK's earnings spike due to its high operating leverage and mid-continent refinery positioning.
FACTOR & THEME
Direct energy sector exposure - sector leading at +7.0% over 20 days. Refining margins have been strong on tight product supply and resilient demand. Theme sentiment accelerating as summer driving season supports gasoline cracks. Peer read-through: VLO, MPC have shown strong relative action confirming sector tailwind.
NEWS FLOW
No specific contract or M&A news in last 60 days. Macro catalyst: summer driving season demand peak and potential hurricane-related refinery outages (bullish for DK if competitors affected). Energy sector momentum is the primary catalyst. Catalyst type: Macro/Industry / Impact: Medium.
INSTITUTIONAL
Volume dry-up is partial (vol_w1 vol_w3 with spike in w2) - not textbook stair-step. RS at +49% vs SPY is strong but RS line NOT at new high suggests this is a retest, not a fresh breakout. No insider buying in 60 days. Short interest 11.4% with 5 days to cover - meaningful squeeze potential if energy momentum continues. High debt/equity (812%) is structural for refiners but limits financial flexibility.

KEY RISK
Thesis invalid on close below \$60.00 (20-day MA and recent consolidation low) or on crack spread collapse below \$15/bbl. Bear case: refining is deeply cyclical - any demand slowdown or inventory build would compress margins rapidly, and DK's leverage amplifies downside.

Leading sector (+7% 20d) and tight base (2.86) are positives, but RS line not at new high and vol dry-up not strictly stair-stepping prevent A-grade. Setup is 2.2% from pivot with no earnings for 86 days - pure momentum trade on energy sector leadership. Strongest disconfirming argument: crack spreads are mean-reverting and DK's high leverage cuts both ways - a 20% margin compression could erase the setup entirely. Conviction: Medium.

Target: \$36 (analyst consensus; 28% upside from pivot)

Stop: \$24.00 (consolidation low; 15% risk from pivot)

CATALYST INTELLIGENCE	
EARNINGS	
Nov 05 - Pre-revenue biotech - Street models -\$2.13 FY EPS. Cash burn and pipeline progression are the metrics. No beat/miss pattern relevant.	
BUSINESS & POSITION	
Immunome develops antibody-based therapeutics targeting solid tumors, with lead asset IM-1021 (an ADC targeting CEACAM5) in clinical trials. The company leverages a proprietary discovery platform to identify novel tumor antigens - positioning in the competitive but high-value ADC/bispecific space.	
FACTOR & THEME	
Oncology biotech with ADC exposure - ADC M&A has been active (Pfizer/Seagen) creating strategic value floor. Healthcare sector +4.1% provides modest tailwind. Sentiment in ADC names remains elevated post-deal activity.	
NEWS FLOW	
No major announcements in last 60 days from public sources. 18.6% short interest with 14.9 days to cover is VERY high - creates significant squeeze potential if positive catalyst emerges. Pipeline data readouts are key watch. Catalyst type: Corporate (clinical data) / Impact: High (binary).	
INSTITUTIONAL	
Price 0.2% from pivot is extremely tight positioning - breakout imminent or failure. However, RS line NOT at new high and base_tight of 4.85 suggest this is more coiled than leading. Volume contraction minimal (1.2%) - not textbook dry-up. No insider buying in 60 days. Extremely high short interest (18.6%, 15 days to cover) is the key asymmetry - short squeeze setup if any positive news emerges. Below 200-day MA is structural concern.	
KEY RISK	
Thesis invalid on close below \$24.00 (recent consolidation low) or on any negative clinical data. Bear case: crowded ADC space with larger players (Daiichi, AbbVie) having superior resources - pipeline assets may struggle to differentiate or attract partnership interest.	

Extremely tight to pivot (0.2%) and very high short interest (18.6%, 15 DTC) create squeeze asymmetry, but RS line not at new high, below 200-day MA, and minimal vol contraction (1.2%) prevent A-grade. This is a high-risk/high-reward squeeze setup, not a quality leadership breakout. No near-term catalyst (85 days to earnings). Strongest disconfirming argument: without a near-term clinical catalyst, the high short interest reflects genuine skepticism about pipeline viability. Conviction: Low.

ENTRY TRIGGER
Close above \$20.75 on volume >150% of 20-day avg (1.6M+ shares)
Target: \$26 (25% measured move; round number resistance)
Stop: \$18.00 (50-day MA; 13% risk from pivot)

CATALYST INTELLIGENCE
EARNINGS
Sep 01 - Street expects \$0.66 FY EPS on 15.6% revenue growth; forward P/E 31.6x reasonable for med-tech. Transition from losses (TTM -\$1.30) to profitability is key inflection. Earnings in 20 days is a NEAR-TERM CATALYST. Catalyst type: Earnings / Impact: High.
BUSINESS & POSITION
MiniMed (Note: ticker MMED typically associated with Mind Medicine; data suggests diabetes device company) develops insulin pump systems and continuous glucose monitoring integration for diabetes management. Competes in a duopoly with Insulet (PODD) and partners/competes with Dexcom/Abbott on CGM integration.
FACTOR & THEME
Medical device exposure with GLP-1 headwind consideration - GLP-1 adoption could reduce Type 2 diabetes device demand long-term. However, Type 1 market unaffected. Healthcare +4.1% 20d is supportive. RS vs SPY at +80.8% is exceptional - among the strongest in the candidate set.
NEWS FLOW
No specific product launches or FDA clearances in last 60 days from available data. Earnings in 20 days is the primary catalyst. 21.5% short interest with 5.6 days to cover creates squeeze potential on beat. Industry read-through: PODD, DXCM action has been mixed on GLP-1 concerns but stabilizing.
INSTITUTIONAL
RS at +80.8% vs SPY is standout relative strength - this is a leader. Price 0.1% from pivot suggests breakout imminent TODAY. Volume contraction 24.8% is solid. However, RS line NOT at new high and below 200-day MA create tension - strong momentum but not confirmed leadership. Very high short interest (21.5%) is significant squeeze fuel. No insider buying in 60 days.

KEY RISK
Thesis invalid on close below \$18.00 (50-day MA) or on GLP-1-related guidance commentary at earnings. Bear case: GLP-1 drugs (Ozempic, Mounjaro) reducing Type 2 diabetes prevalence could structurally shrink TAM - this is the consensus short thesis.
Exceptional RS (+80.8% vs SPY), tight to pivot (0.1%), high short interest (21.5%), and earnings catalyst in 20 days create compelling setup. However, RS line not at new high, below 200-day MA, and loose base (5.59) prevent A-grade. The GLP-1 overhang is the key bear case creating the high short interest - earnings guidance will be decisive. Strongest disconfirming argument: if management acknowledges any GLP-1-related demand impact, the 21% short position will be validated. Conviction: Medium.

Target: \$52 (30% measured move; analyst target zone)
Stop: \$32.00 (50-day MA; 20% risk from pivot)

CATALYST INTELLIGENCE
EARNINGS
Aug 12 - EARNINGS TODAY - pre-revenue biotech so focus on cash runway, enrollment updates, and any pipeline commentary. Street models -\$1.90 FY EPS (losses). This is NOT a beat/miss catalyst but a clinical update event. Catalyst type: Earnings/Corporate / Impact: High (binary on any data/trial update).
BUSINESS & POSITION
Avalyn is developing inhaled pirfenidone (AP01) for idiopathic pulmonary fibrosis (IPF), aiming to improve tolerability over oral formulations. The company targets a large unmet need - IPF has limited treatment options and oral pirfenidone causes significant GI side effects driving discontinuation.
FACTOR & THEME
Biotech theme with focus on respiratory/fibrosis - less crowded than oncology, but lower sentiment intensity. Healthcare sector +4.1% 20d provides tailwind. No direct read-throughs from peer action in last 30 days.
NEWS FLOW
Earnings report TODAY creates immediate binary event risk. IPF inhaled pirfenidone differentiation is compelling thesis but Phase 2 data timing is key watch. No recent partnerships or regulatory milestones announced. Low liquidity (0.33M avg volume) amplifies move potential.
INSTITUTIONAL
RS line at new high with vol contraction is constructive, but base only 4 days old and 7% from pivot - early stage. Volume ratio today at 1.88x suggests positioning ahead of earnings. No insider buying in 60 days. Low float (25M) and low volume create illiquidity risk on both sides.
KEY RISK
Thesis invalid on close below \$32.00 (50-day MA support) or on disappointing enrollment/cash update today. Bear case: inhaled delivery is technically challenging - any formulation or manufacturing issues could delay timelines materially.

ENTRY TRIGGER

Close above \$230.50 on volume >150% of 20-day avg (450K+ shares)

Target: \$275 (19% measured move; prior ATH zone)

Stop: \$195.00 (50-day MA; 15% risk from pivot)

CATALYST INTELLIGENCE

EARNINGS

REPORTED

Earnings already reported (Aug 03), removing near-term catalyst. 7.4% from pivot is wide, RS +13.9% is modest, RS line not at new high. Base is reasonably tight (2.75) but setup needs price to work higher before becoming actionable. Trans-Pacific shipping rates are the macro driver - monitor for rate strength. Conviction: Low.

MATX — 90D Base Setup | Pivot: \$230.31 (gold) | SMA: 9(blue) 21(orange) 50(green) 200(red)
