| Massive insider cluster (\$849.6M across 42 buys in 60d) signals undisclosed value creation ahead; near-term catalyst is August 20 earnings, with potential fleet expansion or distribution increase announcement as sector fundamentals remain strong.                                                                                                                                                                                                                                                                |
| BUSINESS & POSITION                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| Navios Maritime Partners is a shipping MLP operating a diversified fleet of dry bulk and container vessels. The partnership generates stable cash flows through long-term charters with blue-chip counterparties, offering high distribution yields to unitholders in a capital-intensive industry.                                                                                                                                                                                                                    |
| FACTOR & THEME                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| Direct exposure to Energy sector strength (+11.9% vs SPY this week) through maritime logistics; benefits from commodity shipping demand and potential re-rating as energy infrastructure play. Shipping partnerships also gain from rising interest in yield vehicles as alternatives to fixed income.                                                                                                                                                                                                                 |
| BREAKOUT SIGNAL                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

| Extraordinary insider buying - 42 open-market purchases totaling \$849.6M in the last 60 days represents one of the largest insider clusters in the dataset. This is not routine; it signals C-suite and affiliated parties see material upside or undisclosed catalyst ahead. Small float (14.8M) amplifies impact; minimal incremental selling pressure. GRADE UPGRADED from B to A due to insider_cluster = 7.                                                                                                      |

| Next print August 20. Partnership earnings typically focus on distribution coverage, fleet utilization, and charter renewals. Historical beat/miss data not provided, but the unprecedented insider buying cluster suggests management expects a strong print or transformative corporate action.                                                                                                                                                                                                                      |
| KEY RISK                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| Thesis invalid on a close below \$78.00 (prior consolidation support), or on any distribution cut or negative charter renewal guidance at the August 20 print.                                                                                                                                                                                                                                                                                                                                                         |
| ANALYSIS                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| Disconfirming: base_tight at 4.07 is wide (well above VCP threshold), and RS line at new high with only modest RS vs SPY (+12.2) suggests sector lift rather than individual alpha. Counter: the \$849.6M insider cluster is the single strongest buy signal in this entire scan - insiders rarely deploy this scale of capital without asymmetric information. Earnings in 20 days provides immediate catalyst path. Small float, leading sector (Energy), and RS line new high complete the setup. Conviction: High. |
| Signal: Close above \$81.50 on vol >2.88x of 20d avg                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

## Analysis

### Catalyst / Today's Driver

Post-earnings breakout (reported July 30) likely reflects beat or strategic pivot announcement; forward catalyst is Q3 print (est. late October) and potential M&A activity as small-cap media names consolidate or monetize content libraries in streaming wars.

### Business & Position

AMC Networks operates cable entertainment channels (AMC, BBC America, IFC, SundanceTV) and streaming platforms. The company is navigating secular cord-cutting headwinds while monetizing owned IP and exploring strategic alternatives in a consolidating media landscape.

### Factor & Theme

Exposure to media consolidation theme as streaming platforms seek content libraries and niche audiences. Potential beneficiary of any shift in advertising spend or consumer recovery in premium entertainment. Not a primary secular growth theme, but turnaround/M&A optionality provides catalyst fuel.

### Breakout Signal

Close above \$11.20 on vol >4.66x of 20d avg

### Institutional

Vol at 4.66x suggests institutional participation post-earnings. RS line at new high with +28.3% vs SPY confirms strong relative buying. Small float (29.6M) and micro-cap size (\$490M) mean limited sell-side coverage - under-followed setup with asymmetric discovery potential. No insider buying in last 60d is neutral (not a negative for post-earnings technical breakouts).

## Earnings

Reported

### Earnings Context

Reported July 30 (yesterday). Specific EPS/revenue consensus not provided, but 15.76% move and breakout to 52W high suggests material beat or guidance raise. Next print estimated late October 2026.

### Key Risk

Thesis invalid on a close back below \$10.50 (prior resistance becoming support), or on any guidance cut or adverse subscriber trend disclosure before next earnings.

### Analysis

Disconfirming: base\_tight at 2.97 is wider than ideal (VCP standard is <2.0), and micro-cap media faces secular headwinds from cord-cutting. Counter: RS line at new high, prox\_52w 99.7%, vol 4.66x, and strong RS vs SPY (+28.3) meet four of the five A-grade technical criteria. Post-earnings momentum often extends 2-4 weeks if the print resets Street models. Small float and under-owned structure provide incremental-buyer fuel. Conviction: Medium (macro is Mixed, not Risk-On, which caps follow-through probability).

| RS vs SPY at +97.8% is extraordinary - top decile relative strength signals institutional accumulation over the last quarter. Vol 2.59x and RS line at new high confirm this is not retail-driven. Float 49.3M provides liquidity for funds; no insider buying in last 60d is not a negative post-earnings. Likely held by healthcare specialists; check 13F for Perceptive, Farallon, or similar biotech-focused funds.                                                                                                                                        |
| EARNINGS                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

| Disconfirming: base_tight at 4.32 is very wide (no VCP coil), and biotech/diagnostics face binary reimbursement risk. Counter: RS vs SPY +97.8% is elite - this is a clear market leader over the last 12 weeks. RS line new high, prox_52w 98.5%, and vol 2.59x meet three A-grade criteria; the RS magnitude alone justifies institutional-grade status. Post-earnings momentum with a defined catalyst path (Q3 print, CMS decisions) provides 3-6 month holding window. Conviction: Medium (Mixed macro caps healthcare discretionary spending visibility). |
| Signal: Close above \$43.00 on vol >2.59x of 20d avg                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

| Catalyst / Today's Driver                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| Breakout to all-time high likely driven by sector rotation into Financials (+2.8% vs SPY this week) and regional bank recovery thesis; forward catalyst is Q3 earnings (October 21), with potential NIM expansion or loan growth acceleration as rate environment stabilizes.                                                                                                                                                                                                                                                           |
| Business & Position                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| First Internet Bancorp is a digital-first commercial bank offering business and consumer deposit products, commercial loans, and specialty finance (leasing, factoring). The company operates without physical branches, targeting cost efficiency and niche verticals underserved by traditional banks.                                                                                                                                                                                                                                |
| Factor & Theme                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| Direct play on Financials sector leadership (+2.8% vs SPY this week). Benefits from regional bank recovery narrative post-2023 stress, NIM normalization as rate curve steepens, and commercial lending demand tied to reshoring/infrastructure spend. Small-cap bank consolidation also provides M&A optionality.                                                                                                                                                                                                                      |
| Breakout Signal                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| Close above \$29.95 on vol >2.06x of 20d avg                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| Institutional                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| Tiny float (7.5M) and micro-cap size (\$260M) mean this is under-institutional radar - likely held by regional bank specialists or value funds. Vol 2.06x and RS line at new high confirm genuine breakout, not low-liquidity noise. Sector tailwind (Financials leading) provides cross-asset support. No insider buying in last 60d is neutral for banks (regulatory scrutiny limits open-market activity).                                                                                                                           |

| Analysis                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| Disconfirming: base_tight at 3.72 is wide, and regional banks face idiosyncratic credit/deposit risk that macro data doesn't capture. Counter: RS line at new high + prox_52w 100.0% (all-time high breakout) + sector leadership (Financials +2.8%) + vol 2.06x meet A-grade criteria. Tiny float (7.5M) means minimal selling pressure and asymmetric upside on any positive catalyst. Sector grade boost (+0.5) applied. Conviction: Medium (sector rotation trades are powerful but regime-dependent; Mixed macro limits duration). |
| Signal: Close above \$29.95 on vol >2.06x of 20d avg                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

| Disconfirming: base_tight at 2.32 is just above VCP threshold, and thrifts face structural headwinds (low ROE, mortgage cyclicality). Counter: RS line new high + prox_52w 97.6% + insider buying (rare for banks) + base_tight 2.32 (borderline textbook) + sector leadership (Financials +2.8%) meet A-grade criteria. Insider_cluster = 2 is modest but meaningful given sector constraints. Sector grade boost applied. Conviction: Medium (sector rotation is live, but Mixed macro and wide base reduce follow-through certainty). |

| Exceptional RS vs SPY (+71.3%) and RS line new high signal institutional re-discovery of a turnaround. Vol 1.64x is modest but sufficient for a micro-cap (\$210M). Tiny float (10.1M) means minimal selling pressure; likely under-owned by growth funds. No insider buying is a neutral (not a negative for service businesses with lower insider alignment).                                                                                                                                                                                                                                                   |

| ANALYSIS                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| Disconfirming: vol_ratio 1.64x is just above threshold (not the 2x+ needed for A-grade institutional confirmation), base_tight 3.58 is wide, and consulting is a lagging cyclical with no secular tailwind. Counter: RS vs SPY +71.3% is elite, RS line new high, and prox_52w 95.4% meet three of five A-grade criteria. However, volume is the missing piece - 1.64x suggests early-stage accumulation, not breakout conviction. B-grade is appropriate; this is a strong follow-through candidate if volume confirms on next leg. Conviction: Medium (exceptional RS, but Mixed macro and low vol cap upside). |

| Minerals Technologies produces specialty minerals and engineered materials for paper, building materials, automotive, and consumer products. The company offers high-margin additives (precipitated calcium carbonate, talc, bentonite) and has been shifting toward higher-value engineered solutions to improve ROE.                                                                                                                                                                                                                                                                      |
| FACTOR & THEME                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| Limited thematic exposure; plays industrial/construction activity and commodity pricing. Potential indirect beneficiary of reshoring (domestic manufacturing buildout) or infrastructure spend. No primary secular tailwind, but mix shift to engineered products provides multi-year margin expansion story.                                                                                                                                                                                                                                                                               |

| ANALYSIS                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| Disconfirming: RS vs SPY -1.3% is negative - this stock is lagging the market, not leading it. No RS line new high further confirms lack of institutional sponsorship. Counter: base_tight 2.02 is elite VCP quality, vol 2.66x confirms breakout, and prox_52w 91.3% shows price at actionable level. The technical setup is pristine, but the lack of relative strength leadership prevents A-grade. This is a pure mean-reversion / sector-rotation play, not a momentum leader. Conviction: Low (tight base is attractive, but negative RS and Mixed macro reduce follow-through odds). |
| Signal: Close above \$76.50 on vol >2.66x of 20d avg                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

| ANALYSIS                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| Disconfirming: vol_ratio 1.73x is below the 2x threshold for institutional breakout confirmation, RS line not at new high, and prox_52w 88.4% is below the 90+ zone preferred for A-grade. Counter: base_tight 2.42 is solid, RS vs SPY +11.1% is positive, and small float (13.4M) provides torque on incremental buying. This is a quality industrial compounder breaking out from a clean base, but lacks the volume and RS leadership to justify A-grade in a Mixed macro. Conviction: Low (technical structure is fine, but no catalyst visibility or momentum leadership). |
| Signal: Close above \$161.00 on vol >1.73x of 20d avg                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

Analysis

Catalyst / Today's Driver

Post-earnings surge (reported July 29) on vol 22.65x driven by likely beat or order/margin guidance raise; forward catalyst is Q3 print (late October) and any housing policy shift or mortgage rate relief that sustains affordability and demand.

Business & Position

Taylor Morrison is a top-10 U.S. homebuilder operating in high-growth Sun Belt markets (Texas, Florida, Arizona, Carolinas). The company targets entry-level and move-up buyers, with a land-light strategy and strong spec-home inventory management to drive margin and turn efficiency.

Factor & Theme

Direct exposure to housing affordability recovery, potential mortgage rate normalization, and Sun Belt demographic tailwinds (migration, job growth). Homebuilders also benefit from limited existing-home inventory (lock-in effect) driving new-home market share gains.

Breakout Signal

Close above \$72.00 on vol >22.65x of 20d avg

Institutional

Vol 22.65x is extraordinary - institutional block buying post-earnings. However, change\_pct +0.44% today suggests the move already happened (likely July 29-30 post-print). RS line NOT at new high and prox\_52w 99.9% with wide base (4.08) indicate this is late-stage, not early breakout. Float 92.7M and likely high institutional ownership mean limited incremental-buyer fuel.

Earnings

Reported

Earnings Context

Reported July 29. Vol 22.65x and breakout to 52W high suggest material beat on orders, ASP, or gross margin. Next print late October; homebuilders are serial guidance-raisers in up cycles, so Q3 could provide follow-through if demand holds.

Key Risk

Thesis invalid on a close below \$68.00 (prior resistance), or on any order cancellation spike or margin compression at Q3 print.

Analysis

Disconfirming: change\_pct +0.44% today means the breakout already occurred (volume was July 29-30 post-earnings); RS line NOT at new high suggests this is not a market leader; base\_tight 4.08 is very wide (no VCP). Counter: vol 22.65x is institutional, prox\_52w 99.9% confirms breakout, and homebuilders are in a strong fundamental cycle. However, this is a LATE-stage setup - the explosive volume day has passed, today's action is consolidation. B-grade for follow-through potential, but not a fresh entry. Conviction: Low (late to the move; wait for a new base or entry on any pullback).
