ANALYSIS

CATALYST / TODAY'S DRIVER

Post-earnings breakout from 11/04 print, now breaking to 52W high with RS line at new high-a Qullamaggie leadership signal. Forward catalyst: next quarterly earnings in early February 2027 (90d forward), potential inclusion in small-cap healthcare ETFs as sector rotation accelerates, and continued margin expansion narrative as hospital utilization recovers.

BUSINESS & POSITION

Ardent operates a portfolio of acute-care hospitals and outpatient facilities across mid-sized U.S. markets, with ~30 hospitals in 6 states. The company is benefiting from post-pandemic normalization of elective procedures and labor-cost stabilization, positioning it as a recovery play in healthcare services.

FACTOR & THEME

Direct exposure to the Healthcare sector mega-rotation (+12.9% vs SPY this week). Taps the medical-services recovery theme as aging demographics and resumed elective procedures drive utilization; no direct AI/GLP-1 exposure but rides the flight-to-quality in defensive healthcare during risk-off periods.

BREAKOUT SIGNAL

Close above $17.30 on vol >5.8x of 20d avg

INSTITUTIONAL

Volume surge at 5.81x on a modest +8.8% move post-earnings suggests institutional block accumulation rather than retail chase. Small float (21.7M) and $2.4B market cap make this an ideal SMID vehicle for healthcare rotation. No insider buying in the window, but the RS line at new high is the institutional confirmation-smart money is already positioned.

EARNINGS

REPORTED

EARNINGS CONTEXT

Just reported 11/04; consensus and beat/miss data not provided, but the +8.8% post-earnings move on 5.8x volume indicates a material beat or guidance raise. Next print expected ~Feb 2027.

KEY RISK

Thesis invalid on a close below $16.00 (prior consolidation pivot) or any margin guidance cut at the February print. Hospital labor inflation re-accelerating is the fundamental kill switch.

ANALYSIS

Five technical criteria met: vol >5x, prox_52w 97.9, rs_line_new_high true, rs_vs_spy +62, sector leadership. Disconfirming evidence: base_tight 8.81 is extremely wide (VCP textbook is <2.0), indicating volatility rather than institutional coiling-this is more an explosive post-earnings gap than a classic tight base. However, the RS line at new high in the #1 leading sector during risk-off makes this the rare setup with edge. Conviction: Medium-the technical quality is A-tier, but the risk-off regime caps follow-through probability.

Signal: Close above $17.30 on vol >5.8x of 20d avg

Vol vs Avg: 5.81x

ANALYSIS

CATALYST / TODAY'S DRIVER

Post-earnings breakout from 11/05 report, now at 99.4% of 52W high with RS line at new high-a textbook leadership signal. Forward catalyst path: holiday quarter guidance confirmation in February 2027 earnings, potential for comps acceleration as housing market stabilizes, and category share gains in premium home furnishings as competitors struggle.

BUSINESS & POSITION

Arhaus is a premium home-furnishings retailer operating ~100 showrooms, selling artisan-crafted furniture with a vertically integrated supply chain. The company targets affluent consumers and has been gaining share in the high-end home category despite broader retail headwinds.

FACTOR & THEME

Consumer-discretionary recovery play, levered to housing turnover and high-income consumer spending. Not a secular theme (no AI/biotech), but taps the normalization trade as mortgage rates stabilize and existing-home sales recover. The +48.5 RS vs SPY suggests the market is pricing a consumer inflection ahead of consensus.

BREAKOUT SIGNAL

Close above $14.19 on vol >2.5x of 20d avg

INSTITUTIONAL

Volume at 2.54x on a +9.66% move post-earnings is solid institutional validation. RS line at new high with prox_52w at 99.4 signals that smart money is accumulating a new leadership position. No insider buying in the window, but the technical leadership signal substitutes. Float at 52.2M is manageable for institutions but not squeeze-tight.

EARNINGS

REPORTED

EARNINGS CONTEXT

Just reported 11/05; the +9.66% post-earnings move on elevated volume suggests a beat or strong guidance. Next print expected ~February 2027, where holiday comp and margin trajectory will be key.

KEY RISK

Thesis invalid on a close below $13.00 (prior consolidation floor) or any negative revision to Q4 guidance. A resumption of housing-market weakness or consumer pullback in discretionary spending kills the setup.

ANALYSIS

Five criteria met: vol >2x, prox_52w 99.4, rs_line_new_high true, rs_vs_spy +48.5, and a durable forward catalyst (Feb earnings). Disconfirming evidence: Consumer Cyclical in a risk-off regime is a headwind-most discretionary names are getting sold, yet ARHS is at new highs, suggesting either a powerful idiosyncratic story or a narrow institutional bet that could unwind quickly. Base_tight 4.29 is wider than ideal but acceptable for a post-earnings gap. Conviction: Medium-the technical setup is pristine, but the macro regime and sector are working against it.

Signal: Close above $14.19 on vol >2.5x of 20d avg

RS Line Hi	**no**
Above 50MA	**-**
Fwd P/E	**-**
Short %	**-**
Days to Cover	**-**
Inst. Own	**- (data lag)**

ANALYSIS

CATALYST / TODAY'S DRIVER

Post-earnings pop from 11/05 report driving the +42% surge; the magnitude suggests a material beat or contract announcement. Forward catalyst: next quarterly earnings in February 2027, potential defense-contract awards (Karman is levered to government aerospace/defense spending), and sector tailwinds from elevated defense budgets. Insider cluster: 3 distinct insiders bought $1.0M in last 60d-rare and high-conviction signal.

BUSINESS & POSITION

Karman Holdings operates in aerospace and defense, likely providing components, services, or technology to government and commercial aerospace customers. The company sits in a sector with multi-year tailwinds from elevated U.S. and allied defense budgets, though RS data suggests it has lagged the broader market until this recent catalyst.

FACTOR & THEME

Defense spending is a secular tailwind, supported by geopolitical tension and budget growth. However, the -22.0 RS vs SPY over 12 weeks indicates Karman was not participating in the theme until this catalyst. The insider buying cluster suggests insiders saw value at lower levels and expected a re-rating.

BREAKOUT SIGNAL

Close above $45.61 on vol >3.0x of 20d avg

INSTITUTIONAL

Insider cluster score of 11 (3 distinct buyers, $1.0M total in last 60d) is the strongest signal in this entire scan-insiders rarely buy in size unless they see a material catalyst or undervaluation. Volume at 3.08x post-earnings is institutional-grade. However, the negative RS vs SPY and prox_52w at only 38.5 suggest this is a catch-up move, not a leadership breakout. The insider buying warrants a grade upgrade per the rule: BA.

EARNINGS

REPORTED

EARNINGS CONTEXT

Just reported 11/05; the +42% move indicates a significant beat, guidance raise, or contract win. Next print expected ~February 2027.

KEY RISK

Thesis invalid on a close below $38.00 (pre-earnings base) or any defense-contract delay/cancellation. The stock is 61.5% below its 52W high of $118.38, indicating prior volatility or a fundamental reset-understand what caused the prior collapse before adding size.

ANALYSIS

Upgraded from B to A solely due to insider cluster (11 score, $1.0M, 3 distinct buyers)-this is the single strongest alpha factor in the scan. Disconfirming evidence: RS vs SPY is -22.0, prox_52w only 38.5, and the stock is deeply below its 52W high, indicating this is a broken stock attempting a repair, not a true leadership breakout. The risk-off regime further reduces follow-through odds. The insider buying cluster is the only reason to stay involved, but this is a trade, not a core position. Conviction: Low-high-variance setup dependent on defense catalysts and insider knowledge edge.

Signal: Close above $45.61 on vol >3.0x of 20d avg

RS Line Hi	**no**
Above 50MA	**-**
Fwd P/E	**-**
Short %	**-**
Days to Cover	**-**
Inst. Own	**- (data lag)**

ANALYSIS

CATALYST / TODAY'S DRIVER

Post-earnings surge from 11/05 report, +27.9% on 4.03x volume indicates a material beat or clinical/commercial milestone. Forward catalyst: next earnings in February 2027, potential FDA approvals or label expansions for its organ-preservation platform, continued adoption by transplant centers, and CMS reimbursement updates. Insider activity: 1 buy, $109K in last 60d-modest but present.

BUSINESS & POSITION

TransMedics commercializes the Organ Care System, a portable platform that preserves donor organs (hearts, lungs, livers) in a near-physiologic condition during transport, improving transplant outcomes and expanding the donor pool. The company is a category leader in organ-preservation technology, a small but high-growth niche within medical devices.

FACTOR & THEME

Healthcare innovation with durable tailwinds from an aging population, organ-shortage crisis, and value-based care models that reward better transplant outcomes. Not a hot thematic (no AI/GLP-1), but a defensible moat in a clinically validated category. The +12.9% Healthcare sector leadership this week is a tailwind.

BREAKOUT SIGNAL

Close above $88.24 on vol >4.0x of 20d avg

INSTITUTIONAL

Volume at 4.03x on a +27.9% move is institutional-quality. One insider bought $109K in last 60d-not a cluster, but any insider buying in a medtech name post-commercialization is notable. Float at 33.6M is tight enough for supply/demand dynamics to matter. RS vs SPY of only +3.1 indicates this was not a leadership name until this catalyst; now it must prove durability.

EARNINGS

REPORTED

EARNINGS CONTEXT

Just reported 11/05; the +27.9% reaction suggests a significant revenue or margin beat, or guidance raise. Next print ~February 2027.

KEY RISK

Thesis invalid on a close below $75.00 (prior consolidation support) or any setback in transplant-center adoption or reimbursement. The stock is 43.4% below its 52W high of $156, indicating prior volatility-understand whether the decline was fundamental or multiple compression.

ANALYSIS

Volume, sector leadership, and post-earnings momentum are strong, but RS vs SPY of only +3.1, prox_52w at 56.6, and RS line not at new high keep this at B. Disconfirming evidence: the stock is deeply below its 52W high and was not leading until this catalyst-this is a post-earnings gap recovery, not a sustained leadership breakout. The risk-off regime and wide base (5.52) further cap conviction. The insider buy is modest ($109K) and does not trigger an upgrade. Conviction: Medium-worthy of a trade into the next catalyst (Feb earnings or FDA news), but not a core position in this regime.

Signal: Close above $88.24 on vol >4.0x of 20d avg

ANALYSIS

CATALYST / TODAY'S DRIVER

Reporting earnings today (11/06); the +17.3% pre-earnings move on 3.98x volume suggests either a leaked positive result, anticipation of a pipeline update, or sector rotation into healthcare. Forward catalyst path: today's earnings may include clinical trial readout or commercial-launch timelines for its bladder-cancer immunotherapy; next major catalyst is likely FDA action (PDUFA date if applicable) or Phase 3 data presentation at a major oncology conference (ASCO, ESMO) in H1 2027.

BUSINESS & POSITION

CG Oncology is developing cretostimogene (CG0070), an oncolytic immunotherapy for non-muscle-invasive bladder cancer (NMIBC), targeting patients who failed BCG therapy. The company is in late-stage development with potential for FDA approval in 2027, positioning it as a first-in-class commercial opportunity in a large unmet-need market.

FACTOR & THEME

Biotech with binary FDA risk, levered to the oncology innovation wave and the Healthcare sector's +12.9% outperformance. Not AI/GLP-1, but immuno-oncology remains a high-conviction secular theme. The stock is moving ahead of earnings, suggesting either insider knowledge (risky) or sophisticated positioning ahead of a data catalyst.

BREAKOUT SIGNAL

Close above $75.99 on vol >4.0x of 20d avg (earnings day)

INSTITUTIONAL

Volume at 3.98x on a +17.3% move is institutional-grade, but the timing (same day as earnings) raises the question of whether this is informed buying or speculative positioning. No insider buying in the last 60d. Float at 68.3M is moderate; short interest and days-to-cover not provided but would be critical for squeeze dynamics.

EARNINGS

EARNINGS TODAY

EARNINGS CONTEXT

Earnings today (11/06). Biotech earnings are less about revenue (likely pre-commercial) and more about clinical milestones, timelines, and cash runway. The market is pricing in a positive update.

KEY RISK

Thesis invalid on any clinical trial delay, safety signal, or FDA feedback requiring additional studies. For a pre-commercial biotech, the key invalidation is a close below $65.00 (prior support) or any negative regulatory update. Binary event risk is extreme.

ANALYSIS

Prox_52w at 93.8 and volume at 3.98x are strong, but RS vs SPY of only +3.0 and RS line not at new high keep this at B. Disconfirming evidence: the pre-earnings rip on no disclosed news is a red flag-either there's informed buying (illegal) or this is speculation that could reverse violently post-print. Biotech in a risk-off regime is double jeopardy. The sector tailwind (+12.9% Healthcare) is the only edge. Conviction: Low-this is a binary event gamble, not a durable momentum setup. Wait for the earnings reaction and re-assess.

Signal: Close above $75.99 on vol >4.0x of 20d avg (earnings da

ANALYSIS

CATALYST / TODAY'S DRIVER

No same-day catalyst disclosed; the +14.2% move on 3.29x volume suggests either a contract win, analyst upgrade, or sector rotation into enterprise IT. Forward catalyst: earnings on January 27, 2027 (82d out), potential large enterprise or government networking contract announcements, and 5G/Wi-Fi 6/7 infrastructure refresh cycles.

BUSINESS & POSITION

Extreme Networks provides enterprise networking solutions (switching, wireless, SD-WAN) to education, healthcare, and large enterprises. The company competes with Cisco, Arista, and HPE Aruba, positioning as a lower-cost, higher-service alternative in the mid-market.

FACTOR & THEME

Enterprise IT spending / campus-network refresh, levered to the enterprise infrastructure cycle. No direct AI exposure but could benefit if AI-driven data-center expansion spills into campus networks. The base_tight of 2.85 is the tightest in the top cohort-a classic VCP coil.

BREAKOUT SIGNAL

Close above $24.03 on vol >3.0x of 20d avg

INSTITUTIONAL

Volume at 3.29x on a +14.2% move is solid. Base_tight at 2.85 indicates institutional coiling-supply has been absorbed quietly. No insider buying in the window. Float at 127.1M is large, reducing squeeze potential but allowing institutional accumulation without spiking price.

EARNINGS

EARNINGS IN 82D

EARNINGS CONTEXT

Earnings January 27, 2027 (82d out). Consensus and beat history not provided, but the 82d runway is sufficient to build a position ahead of the print if fundamentals confirm.

KEY RISK

Thesis invalid on a close below $21.00 (prior consolidation floor) or any negative pre-announcement ahead of the January print. Enterprise IT spending is cyclical and sensitive to macro-a risk-off regime is a headwind.

ANALYSIS

Base_tight at 2.85 (tightest in the scan), vol at 3.29x, and a durable 82d forward catalyst (earnings 1/27) are strong. Disconfirming evidence: RS vs SPY of only +4.9, prox_52w at 71.2 (not in breakout zone), and RS line not at new high indicate this is early-stage momentum, not a confirmed breakout. The risk-off regime caps conviction. Conviction: Medium-this is a watch-and-wait for a higher-probability entry closer to $26-27 (85+ prox_52w) or wait for the January earnings setup.

Signal: Close above $24.03 on vol >3.0x of 20d avg

Vol vs Avg: 3.29x
