| Current move driven by secular AI-driven imaging adoption and outpatient shift momentum; forward catalyst is November 5 earnings (51d) where AI-enhanced workflow and DeepHealth platform contribution will be key, plus any guidance on imaging center expansion and payer contract wins through year-end.                                                                                                                                                                                             |
| BUSINESS & POSITION                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| RadNet is the largest owner/operator of outpatient diagnostic imaging centers in the U.S., with 350+ locations and radiology workflow software (DeepHealth AI). The company benefits from the structural shift of imaging from hospital to lower-cost outpatient settings, enhanced by proprietary AI tools that compress read time and expand throughput.                                                                                                                                              |
| FACTOR & THEME                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
| Taps AI-in-healthcare (DeepHealth workflow automation), outpatient migration, and aging demographics driving imaging volumes. Theme momentum is accelerating as payers and providers prioritize cost reduction and AI-assisted diagnostics gain regulatory/clinical traction.                                                                                                                                                                                                                           |
| BREAKOUT SIGNAL                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| Close above \$78.33 on vol >1.5x of 20d avg                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| INSTITUTIONAL                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| Volume 1.57x on a continuation day (not extreme accumulation) suggests steady follow-through rather than climactic buying. No insider buys in the last 90 days and no data on accumulation/distribution bar counts limit conviction on institutional positioning; the 37.4 RS vs SPY over 12 weeks is strong and suggests sustained fund interest, but lack of volume intelligence (A/D rating, flow trend) prevents confirmation of a silent-build or regime change.                                   |
| EARNINGS                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

| Strong 12-week RS (+37.4) and proximity to 52W high (91.3%) with a textbook 2.93 base-tightness ratio are institutional-quality. Disconfirming evidence: RS line NOT at new high, volume only 1.57x (lacks breakout surge), and base_tight just under 3.0 (wider than ideal VCP coil). In a mixed/transitional macro regime with small-caps lagging, this is a solid follow-through candidate but not a high-conviction breakout without the RS line confirmation or volume climax. Conviction: Medium. |
| Signal: Close above \$78.33 on vol >1.5x of 20d avg                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

| Current move reflects the ongoing energy sector rally (+4.7% vs SPY this week) and rising oil-services activity; forward catalyst is November 4 earnings (50d) where drilling activity, supply-chain margin expansion, and any upstream capex guidance will drive re-rating, plus exposure to any oil price strength or international activity acceleration into Q4.                                                                          |
| BUSINESS & POSITION                                                                                                                                                                                                                                                                                                                                                                                                                           |
| DNOW is a leading distributor of energy and industrial products (pipes, valves, mill supplies) to upstream, midstream, and downstream oil & gas. The company benefits from rig-count recovery and energy infrastructure investment, with revenue highly correlated to North American drilling activity and international projects.                                                                                                            |
| FACTOR & THEME                                                                                                                                                                                                                                                                                                                                                                                                                                |
| Direct play on energy capex recovery and oil-price stability. Theme momentum accelerating with Energy leading sectors (+4.7% this week). Also benefits from any reshoring/industrial renaissance in pipes/valves for LNG and petrochemical build-out.                                                                                                                                                                                         |

| INSTITUTIONAL                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| Volume only 1.54x on a sector-driven day limits conviction that this is incremental institutional accumulation vs. passive sector rotation. No insider buys in last 90 days. Float is large at 177.7M, suggesting easier supply and less squeeze potential. The 16.5 RS vs SPY is solid but not elite; without A/D rating or flow trend data, institutional conviction is unclear.                                                            |

| Next earnings November 4. Consensus and beat history not provided; DNOW has historically been volatile on energy activity surprises. Watch for North America vs. international sales mix and any supply-chain margin commentary.                                                                                                                                                                                                              |
| KEY RISK                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| Thesis invalid on a close below \$14.80 (prior tight-range support and ~50-day MA), or if oil prices break below \$65 WTI (macro energy thesis breaks), or if November 4 earnings show flat/declining rig-count exposure or margin compression from competitive pricing.                                                                                                                                                                      |
| ANALYSIS                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| Textbook base-tightness (1.58, VCP-quality coil) and 92% proximity to 52W high in a leading sector (Energy +4.7%) are strong. Disconfirming evidence: RS line NOT at new high, modest volume (1.54x), and large float (177.7M) reduce breakout urgency. In a mixed macro regime, energy leadership is a tailwind but the lack of RS line confirmation and only incremental volume suggest this is sector beta, not alpha. Conviction: Medium. |
| Signal: Close above \$15.88 on vol >1.5x of 20d avg                                                                                                                                                                                                                                                                                                                                                                                           |
| Vol vs Avg: 1.54x                                                                                                                                                                                                                                                                                                                                                                                                                             |

ANALYSIS

CATALYST / TODAY'S DRIVER

Current 7.95% move likely reflects sector rotation into healthcare IT and anticipation of revenue-cycle-management tailwinds from hospital margin pressure; forward catalyst is October 28 earnings (43d) where any guidance raise on software adoption, client adds, or revenue-per-transaction growth would extend momentum, plus exposure to any broader healthcare digitization policy announcements or M&A speculation.

BUSINESS & POSITION

Waystar provides cloud-based revenue cycle management (RCM) software for healthcare providers, automating billing, claims, payments, and denial management. The company benefits from hospital/physician-practice need to optimize reimbursement amid labor shortages and payer complexity.

FACTOR & THEME

Taps healthcare IT modernization, AI-driven workflow automation in RCM, and structural margin pressure on providers driving software adoption. Theme momentum steady but not accelerating; healthcare IT is a defensive growth pocket in mixed macro.

BREAKOUT SIGNAL

Close above \$26.88 on vol >2.4x of 20d avg

INSTITUTIONAL

Volume 2.46x is the strongest surge in this candidate set, suggesting genuine institutional interest or news-driven accumulation. No insider buys in last 90 days and no A/D rating/flow trend data limit visibility. The 45.1 RS vs SPY (highest in the set) over 12 weeks is elite and confirms sustained fund buying; large float (139.4M) and only 66.6% proximity to 52W high suggest early-stage move, not exhaustion.

EARNINGS

EARNINGS IN 43D

EARNINGS CONTEXT

Next earnings October 28. Consensus and beat history not provided; Waystar is a relatively recent IPO (2024) so limited earnings track record. Watch for net revenue retention (NRR), new client wins, and any commentary on AI/automation feature adoption driving ARPU.

KEY RISK

Thesis invalid on a close below \$24.50 (prior breakout level and 20-day MA support), or if October 28 earnings show NRR deceleration, client churn, or any hospital IT budget pullback commentary that questions the RCM growth narrative.

ANALYSIS

Elite 12-week RS (+45.1, best in set) and volume surge (2.46x, also best) are institutional-quality signals. Disconfirming evidence: prox\_52w only 66.6% (far from breakout zone), base\_tight 3.67 (wide, not a VCP coil), and RS line NOT at new high. This is a strong continuation/accumulation setup but NOT a breakout - the stock is mid-base, not at highs. In mixed macro, early-stage setups without technical confirmation are watch-list, not high-conviction buys. Conviction: Medium.

Signal: Close above \$26.88 on vol >2.4x of 20d avg
