ENTRY TRIGGER
Close above \$114.79 on volume >150% of 20-day avg (>900K shares)
Target: \$135 based on 18% measured move from 14-day base depth; secondary target \$145 on sustained rate environment
Stop: \$109.50 (4.5% below pivot, below 14-day base low)

CATALYST INTELLIGENCE
EARNINGS
Nov 05 - Consensus expects EPS ~\$1.50-1.80 on continued elevated spot rates; TTM EPS \$15.64 reflects extraordinary rate environment. Company has beaten 4 of last 4 quarters. Forward P/E compression (7.3 trailing 17.8 forward) reflects normalization assumptions that may prove conservative if rates persist.
BUSINESS & POSITION
International Seaways operates one of the largest tanker fleets globally, transporting crude oil and refined petroleum products via VLCCs, Suezmaxes, Aframaxes, and MR tankers. The company benefits from tight vessel supply dynamics and elevated spot rates driven by longer ton-mile routes post-Russia sanctions and Red Sea diversions.
FACTOR & THEME
Direct exposure to energy security/supply-chain dislocation theme with sentiment accelerating as OPEC+ policy shifts and geopolitical tensions sustain rate premiums. Peer DHT and STNG strength confirms sector momentum; negative beta (-0.1) provides defensive rotation appeal.
NEWS FLOW
Tanker rates have remained elevated through Q3 with VLCC TCE rates averaging \$45-50K/day. No specific corporate catalysts announced in last 60 days, but industry tailwinds from continued Red Sea avoidance and potential hurricane-season disruptions support near-term fundamentals. Catalyst type: Industry / Impact: Medium.
INSTITUTIONAL
Volume dry-up with price at 52W high and RS line at new high suggests quiet institutional accumulation into the tight 14-day base. Zero insider activity in last 60 days is baseline for this name. Float of 41.5M shares is manageable; 7.9% short interest (4.4 days to cover) creates squeeze potential on breakout.

KEY RISK
Thesis invalid on close below \$110 base low or if tanker spot rates collapse >30% on OPEC+ supply surge or demand destruction; binary exposure to geopolitical normalization (Red Sea reopening) would compress ton-mile demand immediately.
RS line at 52W high with price 0.2% from pivot is compelling, but base_tight 4.3 is loose for A-grade and vol dry-up is partial (vol_w1 < vol_w3 but vol_w2 was higher). Earnings 35 days out removes imminent catalyst urgency. Energy sector lagging (-3.0%) in current regime creates headwind despite strong relative strength. Strongest bear case: forward P/E of 17.8 implies Street expects significant rate normalization - if consensus is right, upside is capped. Mixed/transitional regime warrants caution on breakout follow-through. Conviction: Medium.

Close above \$23.61 on volume >130% of 20-day avg (>4.4M shares)
Target: \$28 based on 19% measured move; aligned with prior resistance zone
Stop: \$22.40 (5% below pivot, below 16-day base structure)

CATALYST INTELLIGENCE
EARNINGS
Oct 28 - Consensus EPS ~\$0.55-0.60 for Q3; TTM EPS \$2.94 reflects exceptional rate environment. Serial beater with 4/4 quarters exceeded. Management has maintained disciplined capital allocation with regular/special dividends. Forward P/E 11.0 vs trailing 8.0 reflects modest rate normalization assumption.
BUSINESS & POSITION
DHT Holdings operates a pure-play fleet of VLCCs (Very Large Crude Carriers), the largest class of oil tankers, providing critical infrastructure for long-haul crude transportation. The company's asset-light chartering strategy and dividend focus make it a preferred vehicle for tanker cycle exposure.
FACTOR & THEME
Peak exposure to tanker supercycle thesis with VLCC rates at multi-year highs. Negative beta (-0.12) provides macro hedge characteristics. Peer read-through from FRO, STNG, and INSW all showing similar strength confirms sector-wide institutional rotation into energy logistics.
NEWS FLOW
VLCC spot rates have held \$50K+/day TCE through September. Company announced continued fleet optimization in Q2 call. No material corporate announcements in last 60 days but industry fundamentals remain supportive. Earnings in 27 days is the next catalyst. Catalyst type: Earnings / Impact: High.
INSTITUTIONAL
RS line at new high with volume contracting into the 52W high suggests textbook accumulation pattern. Zero insider buying in 60 days is neutral baseline. Float of 144.9M is larger, requiring more institutional participation for meaningful moves. Short interest 10.4% with 3.9 days to cover provides fuel on confirmed breakout.

KEY RISK
Thesis invalid on close below \$22.50 or if VLCC spot rates fall below \$30K/day TCE; customer concentration risk with major oil traders and potential fleet oversupply from newbuild deliveries in 2027-2028 cycle.

Strongest RS in the batch (+44.6%) with RS line at new high and price within pennies of breakout is technically compelling. However, base_tight 4.2 is loose, volume dry-up is soft (vol_w2 vol_w3), and Energy sector is lagging in current regime. Earnings in 27 days provides catalyst but also event risk. Strongest bear case: 10.4% short interest could be informed sellers anticipating rate normalization - and Street targets average \$21.85 (below current price) suggests consensus sees limited upside. Mixed regime reduces breakout reliability. Conviction: Medium.

ENTRY TRIGGER

Close above \$168.50 on volume >150% of 20-day avg (>570K shares)

Target: \$188 based on 12% measured move from 20-day base; \$200 secondary on trend continuation

Stop: \$155.00 (4% below current, at base low support)

CATALYST INTELLIGENCE

EARNINGS

Oct 29 - Street expects EPS ~\$3.20-3.40 on revenue of ~\$2.4B. Forward EPS \$13.25 implies significant acceleration; PEG 0.99 suggests reasonable growth-adjusted valuation. Earnings growth +76% YoY indicates strong execution. Beat/miss pattern: generally in-line to slight beats.

BUSINESS & POSITION

Insight Enterprises is a Fortune 500 IT solutions integrator providing hardware, software, cloud, and managed services to enterprise clients. The company benefits from enterprise digital transformation spending and positions as a trusted partner for AI infrastructure deployment across hybrid cloud environments.

FACTOR & THEME

Direct exposure to enterprise IT refresh cycle and AI infrastructure buildout as companies upgrade compute/networking for GenAI workloads. Technology sector leading (+6.4%) in current regime provides tailwind. Peer CDW reported solid results; VAR/distributor space seeing sustained demand.

NEWS FLOW

No major corporate announcements in last 60 days. Company has been executing on cloud services expansion and AI-adjacent infrastructure deals. Earnings in 28 days is primary catalyst; potential for upside guidance given enterprise IT spending resilience. Catalyst type: Earnings / Impact: High.

INSTITUTIONAL

Base_tight 1.79 is excellent - among the tightest in the batch - suggesting controlled institutional accumulation with minimal volatility. Volume dry-up (vol_w1 279K vs vol_w3 333K) shows supply exhaustion. Zero insider activity is neutral baseline. Small float (28.8M) amplifies moves on volume confirmation.

KEY RISK

Thesis invalid on close below \$155 (base low) or if enterprise IT spending decelerates on macro weakness; 4.4% distance to pivot means breakout is not imminent - requires patience. Customer concentration with large enterprise accounts creates lumpy revenue risk.

Exceptional base_tight 1.79 and strong RS (+42.5%) in leading Tech sector make this structurally attractive. However, RS line not at new high and 4.4% to pivot means breakout is 2-3 weeks away. Partial vol dry-up (vol_w2 spike interrupts clean contraction). Earnings in 28 days provides catalyst but timing requires price to work toward pivot first. Strongest bear case: Street target \$163.75 is essentially at current price - consensus sees limited upside from here, though forward estimates imply significant EPS growth. Mixed regime tempers conviction. Conviction: Medium.

Close above \$87.72 on volume >130% of 20-day avg (>1.3M shares)
Target: \$100 based on 14% measured move; psychological round number target
Stop: \$82.50 (4.3% below pivot, below 17-day base structure)

CATALYST INTELLIGENCE
EARNINGS
Nov 03 - Street expects EPS ~\$3.50-4.00 given sustained crack spread environment. TTM EPS \$17.04 reflects extraordinary margin capture. Forward P/E 5.8 is extremely cheap if margins persist; PEG unavailable suggests limited growth visibility post-normalization.
BUSINESS & POSITION
Par Pacific operates refineries in Hawaii, Montana, Wyoming, and Washington, focusing on niche regional markets with limited competition. The company benefits from geographic moats, tight regional supply/demand dynamics, and exposure to West Coast/Pacific crack spreads.
FACTOR & THEME
Levered to refining margins (crack spreads) which have remained elevated due to capacity rationalization and regional supply constraints. West Coast gasoline premiums provide structural advantage. Energy sector lagging (-3.0%) creates near-term headwind despite strong company-level fundamentals.
NEWS FLOW
No material corporate announcements in last 60 days. Refining margins have remained supportive through Q3 with West Coast gasoline cracks elevated. Potential hurricane impacts to Gulf Coast could temporarily boost Pacific region demand. Catalyst type: Earnings / Impact: Medium.
INSTITUTIONAL
Base_tight 2.25 is solid with price holding near highs on declining volume - classic accumulation signature. Zero insider activity in 60 days is baseline. Float of 48.8M is modest; 12.8% short interest (5.5 days to cover) provides squeeze mechanics on confirmed breakout.

KEY RISK
Thesis invalid on close below \$83 (base low) or if crack spreads collapse on demand destruction or new refinery capacity; earnings in 33 days creates event risk. Binary exposure to commodity spreads makes fundamental thesis inherently volatile.
Tight base (2.25) and strong RS (+40%) with price 1.8% from pivot creates actionable setup potential. However, RS line not at new high, Energy sector lagging, and partial vol dry-up (vol_w1 nearly equals vol_w3) reduce grade. Strongest bear case: Forward P/E 5.8 reflects market's view that current margins are unsustainable - if crack spreads normalize toward historical averages, earnings power drops significantly. Street target \$86.57 is below current price, suggesting professional skepticism. Conviction: Medium.

PARR — 90D Base Setup | Pivot: \$87.72 (gold) | SMA: 9(blue) 21(orange) 50(green) 200(red)

Target Pr.	\$179.36

ENTRY TRIGGER

Close above \$190.91 on volume >140% of 20-day avg (>1.04M shares)

Target: \$215 based on 13% measured move; prior 52W high \$201.54 is interim resistance

Stop: \$179.00 (4.5% below pivot, below 18-day base structure)

CATALYST INTELLIGENCE

EARNINGS

Nov 03 - Street expects EPS ~\$1.45-1.55 on revenue ~\$165M. Forward P/E 22.2 on 16% earnings growth yields PEG 3.2 - premium valuation requires beat-and-raise. Beat history is solid (3 of 4 quarters). High-margin SaaS model provides earnings visibility.

BUSINESS & POSITION

Qualys provides cloud-based IT security and compliance solutions, specializing in vulnerability management, web application security, and compliance monitoring. The company's platform approach and high gross margins (83%) position it as a durable franchise in mandatory enterprise security spending.

FACTOR & THEME

Core cybersecurity exposure with sentiment stable-to-accelerating as breach incidents and regulatory mandates (SEC cyber disclosure rules) drive sustained demand. Tech sector leading (+6.4%) provides tailwind. Peer CrowdStrike premium suggests quality cybersecurity names can command valuation expansion.

NEWS FLOW

No major corporate announcements in last 60 days. Cybersecurity spending remains resilient despite broader IT budget scrutiny. FedRAMP certifications and compliance tool expansion continue. Earnings in 33 days is primary catalyst. Catalyst type: Earnings / Impact: Medium.

INSTITUTIONAL

Strict vol dry-up confirmed (602K 718K 798K week-over-week contraction pattern) suggests orderly accumulation. Zero insider activity is baseline. Float of 34.3M is tight; 13.8% short interest (5.1 days to cover) creates squeeze potential but also reflects valuation skepticism.

KEY RISK

Thesis invalid on close below \$180 (base low and 50-day MA zone) or on earnings miss/guide-down; PEG 3.2 means any growth deceleration will compress multiple significantly. Competition from CrowdStrike, Tenable, and Rapid7 in vulnerability management space.

Clean vol dry-up pattern and position in leading Tech sector with cybersecurity theme support are positives. However, RS line not at new high (only +16.5% vs SPY), base_tight 4.09 is moderate, and PEG 3.2 creates high bar for earnings execution. Strongest bear case: Street target \$179.36 is 4% below current price - consensus sees the stock as fairly valued to overvalued at current levels, meaning upside requires sentiment shift rather than just fundamental delivery. Conviction: Medium.

CATALYST INTELLIGENCE
Oct 30

7.8% to pivot is too far for imminent breakout consideration - requires significant price appreciation before trigger becomes relevant. RS line not at new high, Financials sector lagging (-8.7%) in current regime creates substantial headwind. High debt/equity (257%) and 17.3% short interest add risk factors. Base needs to tighten and sector needs to rotate before promotion. Conviction: Low.

Nov 03

Price 0.2% from pivot but RS vs SPY is only +0.3% - essentially market-performing despite Tech sector leading. RS line nowhere near new high. Company is unprofitable (negative TTM EPS, negative operating margin) with forward P/E 51x creating high valuation risk. 12.9% short interest with 8.4 days to cover suggests informed skepticism. Proximity to pivot without relative strength is a false signal. Conviction: Low.

EARNINGS
REPORTED

5.8% to pivot is too distant for near-term breakout. RS only +7.2% indicates underperformance vs market. Earnings already reported (Sep 08) means no catalyst for ~3 months. Industrials sector neutral but stock lacks relative strength leadership. Defensive characteristics (beta 0.67) but no alpha angle present. Conviction: Low.

Solid base_tight 2.17 but RS line not at new high and vol contraction is weak (only 7.9%). Trailing P/E 53.6 and forward P/E 36.8 create stretched valuation despite 55% earnings growth. High short interest (15%) and debt/equity (146%) add risk. Consumer Defensive sector is middle-of-pack. Needs RS improvement and base tightening before promotion. Conviction: Low.
