## ANALYSIS

### CATALYST / TODAY'S DRIVER

Stock breaking to 52W high ahead of Oct 28 earnings; market positioning for a positive surprise after management lowered expectations last quarter. Forward catalyst: holiday season GMV and take-rate expansion guidance on the upcoming print could drive a material re-rating.

### BUSINESS & POSITION

Etsy operates a global two-sided marketplace connecting artisan sellers with buyers seeking unique handmade and vintage goods, generating revenue through listing fees, transaction fees, and payment processing. The platform has 95M+ active buyers and differentiated positioning in the anti-Amazon niche.

### FACTOR & THEME

Consumer recovery and e-commerce stabilization theme; benefits from consumer shift back to discretionary spending and small-business tailwinds. Holiday shopping season setup into Q4 is a seasonal accelerant.

### BREAKOUT SIGNAL

Close above $88.00 on vol >1.5x 20d avg with RS line at new high

### INSTITUTIONAL

Volume at 1.51x is modest but the RS line hitting new high while price breaks out is classic institutional leadership confirmation per Qullamaggie. Float rotation at this market cap suggests measured accumulation into the print rather than retail chase.

### EARNINGS

EARNINGS IN 13D

### EARNINGS CONTEXT

Oct 28 print is critical; last quarter featured conservative guidance that reset expectations. Consensus likely looking for stabilization in GMV and any positive commentary on seller engagement or take-rate. Beat history and estimates not provided in data.

### KEY RISK

Thesis invalid on close back below $85 pivot or any guide-down on Oct 28 that signals continued GMS deceleration. Wide base (5.97 ATR range) makes this volatile; a headline miss could gap it back 10%+.

### ANALYSIS

RS line new high is the single strongest institutional confirmation signal, and proximity to 52W high (98.7) into earnings is textbook setup. However, base is wide (5.97 vs ideal <2.0), RS vs SPY is barely positive (+1.7), volume surge is modest, and mega-cap risk-on regime creates crosswind for SMID names. This is a binary event setup 13 days out-attractive for swing traders with tight risk, but conviction is tempered by base quality and macro. Conviction: Medium

**Signal: Close above $88.00 on vol >1.5x 20d avg with RS line at**

**Vol vs Avg: 1.51x**

## ANALYSIS

### CATALYST / TODAY'S DRIVER

7% move today likely front-running Oct 20 earnings (5 days out) as market anticipates AI-driven workflow automation momentum. Forward catalyst: guidance on GenAI product adoption and SaaS transition progress will dictate whether this extends or stalls post-print.

### BUSINESS & POSITION

Pegasystems provides low-code enterprise software for customer engagement and digital process automation, with recent pivot to GenAI-infused workflow tools targeting Fortune 500 clients. Company is mid-transition from perpetual license to SaaS, creating bookings visibility but near-term margin pressure.

### FACTOR & THEME

Enterprise AI and automation theme-direct exposure to corporate efficiency spend and digital transformation budgets. However, broader enterprise software spending is decelerating in current macro, creating sector headwind.

### BREAKOUT SIGNAL

Close above $36.00 on vol >2.0x 20d avg, tight 1.8 ATR base

### INSTITUTIONAL

Volume 2.18x with tight base (1.8 ATR) signals controlled accumulation ahead of the print. RS vs SPY +10.6 shows consistent outperformance. No insider activity in last 90 days is neutral; institutional ownership data unavailable in feed.

### EARNINGS

EARNINGS IN 5D

### EARNINGS CONTEXT

Oct 20 print imminent (5 days). Key focus will be GenAI product traction, Annual Contract Value (ACV) growth, and SaaS transition metrics. Beat/miss history and consensus not provided but forward guidance on AI adoption is the real catalyst.

### KEY RISK

Thesis invalid on close below $34.50 or any disappointment on Oct 20 regarding GenAI pipeline or SaaS bookings growth. Stock is only at 53% of 52W high ($68)-still 33% below previous highs suggests overhead resistance if print underwhelms.

### ANALYSIS

Textbook tight base (1.8) with elevated volume and positive RS into earnings is attractive, but prox_52w of only 53.2 means significant overhead supply from bag-holders at higher levels. RS line NOT at new high downgrades from A-tier. This is a binary event play 5 days out in a crosswind macro; decent setup for those with catalyst conviction, but disconfirming evidence is the 33% gap to highs and enterprise software sector deceleration. Conviction: Medium

**Signal: Close above $36.00 on vol >2.0x 20d avg, tight 1.8 ATR**

**Vol vs Avg: 2.18x**

## ANALYSIS

### CATALYST / TODAY'S DRIVER

Today's 7.3% move appears to be sector rotation into Consumer Staples (leading sector this week +4.3% vs SPY) and anticipation of back-to-school strength showing up in the Nov 5 print. Forward catalyst: earnings in 21 days will reveal higher-ed enrollment trends and digital platform adoption.

### BUSINESS & POSITION

McGraw Hill provides educational content, software, and services to K-12 and higher-ed institutions, with ongoing digital transition to adaptive learning platforms. Company benefits from multi-year textbook adoption cycles and secular shift to hybrid learning models post-COVID.

### FACTOR & THEME

Education recovery and Consumer Staples defensive rotation. Sector is +4.3% vs SPY this week, providing tailwind. However, theme momentum is stable rather than accelerating-no new macro catalyst beyond cyclical enrollment recovery.

### BREAKOUT SIGNAL

Close above $14.00 on vol >1.6x 20d avg, RS +44 vs SPY

### INSTITUTIONAL

Volume 1.68x is modest but RS vs SPY +44.2 over 12 weeks shows sustained outperformance. Small float (25M) creates potential for sharp moves on institutional interest. No insider activity in last 90 days; institutional ownership data not available in feed.

### EARNINGS

EARNINGS IN 21D

### EARNINGS CONTEXT

Nov 5 print (21 days out) will be pivotal for confirming fall enrollment trends and digital platform revenue trajectory. Consensus and beat history not provided, but education stocks tend to be low-volatility with predictable seasonal patterns.

### KEY RISK

Thesis invalid on close below $13.50 support or any Nov 5 guidance suggesting weak higher-ed enrollment or delayed textbook adoption cycles. Stock is 79% of 52W high-needs earnings beat to break through $18 resistance.

### ANALYSIS

Strong 12-week relative strength (+44.2) and sector tailwind (Staples leading) support the move, but base is wider than ideal (2.88) and RS line not at new high. Prox_52w at 79.1 puts it in striking distance of breakout zone. Disconfirming evidence: volume surge is only 1.68x (below institutional threshold) and small-cap crosswind in current regime limits follow-through potential. This is a solid B-grade sector play but not an A-tier breakout. Conviction: Medium

**Signal: Close above $14.00 on vol >1.6x 20d avg, RS +44 vs SPY**

**Vol vs Avg: 1.68x**
