ANALYSIS

CATALYST / TODAY'S DRIVER

Massive 8.5x volume spike suggests institutional block accumulation ahead of the October 28 earnings print (61 days out). Forward catalyst: next earnings date provides re-rating opportunity in accelerating cybersecurity spend cycle, with November print timing aligned to enterprise budget flush for calendar year-end.

BUSINESS & POSITION

Tenable is a leading cybersecurity exposure management platform, providing continuous vulnerability assessment and threat intelligence across cloud, on-prem, and OT environments. The company has carved defensible market share in the growing attack surface management category, with sticky enterprise contracts and high switching costs.

FACTOR & THEME

Direct exposure to the secular cybersecurity infrastructure buildout, amplified by zero-trust architecture adoption and regulatory compliance tailwinds (SEC cyber disclosure rules, NIS2 in EU). Theme momentum accelerating as breach costs and AI-driven attack vectors force enterprises to upgrade legacy point solutions to continuous exposure platforms.

BREAKOUT SIGNAL

Close above \$37.67 on vol >850% of 20d avg

INSTITUTIONAL

The 8.5x volume explosion with only +0.13% price change is a textbook institutional absorption pattern-smart money quietly building position without spiking price, classic 'silent accumulation.' Float of 108.5M provides liquidity for block trades. No recent insider buying (last 90 days clean), but the volume signature alone screams institutional pre-positioning ahead of the October earnings catalyst.

EARNINGS

EARNINGS IN 61D

EARNINGS CONTEXT

Next earnings October 28. Consensus estimates not provided in data; historically Tenable has shown subscription revenue growth in the 15-20% range. Forward catalyst timing aligns well with enterprise budget cycles entering Q4, typically the strongest quarter for cybersecurity bookings.

KEY RISK

Thesis invalid on a close below \$35.50 (approximate 20-day MA support), or if October 28 earnings show deceleration in ARR growth or net retention below 110%, signaling competitive pressure from broader platform players (Palo Alto, CrowdStrike).

ANALYSIS

Disconfirming: RS line NOT at new high (key Qullamaggie signal missing) and base is wider than textbook VCP (2.49 vs ideal <2.0), suggesting consolidation not yet fully coiled. However, the 8.5x volume with flat price is an elite institutional setup-absorption at scale without markup is how smart money builds before the move. Prox_52w at 86.3 in breakout zone, rs_vs_spy +26.8 confirms leadership, and 61 days to next earnings provides a clear forward catalyst path. Technology sector +2.8% tailwind. Conviction: High-the volume anomaly is rare and actionable, upgrade from B to A on pure institutional signature despite missing RS line new high.

ANALYSIS
CATALYST / TODAY'S DRIVER
Stock within 1.4% of 52-week high ahead of September 9 earnings (12 days out), with base_tight at 1.98 indicating textbook VCP coil. Forward catalyst: the imminent earnings print is the primary catalyst-a beat on white-collar hiring trends and guidance raise could trigger breakout to new all-time highs.
BUSINESS & POSITION
Korn Ferry is the world's largest executive search and organizational consulting firm, with diversified revenue across recruitment, leadership development, and HR advisory. The company has pricing power in C-suite and senior executive placements, with countercyclical consulting revenue providing downside cushion.
FACTOR & THEME
Direct leverage to white-collar labor market recovery and corporate hiring budgets rebounding post-recessionary trough. As enterprises restart strategic hiring and succession planning after cost-cutting cycles, Korn Ferry captures the high end of the market. Theme is early-cycle recovery play-momentum depends on macro not re-weakening.
BREAKOUT SIGNAL
Close above \$86.28 on vol >176% of 20d avg
INSTITUTIONAL
Volume 1.76x is elevated but not explosive, suggesting steady accumulation rather than panic buying. Float of 50.4M is manageable for institutional rotation. No insider buying in last 90 days is neutral (executives often restricted ahead of earnings). Prox_52w at 98.6% and base_tight 1.98 signal institutions are already positioned-this is a momentum continuation setup, not an early discovery.
EARNINGS
EARNINGS IN 12D
EARNINGS CONTEXT
Next earnings September 9 (12 days). Consensus estimates not provided, but the setup into earnings (tight coil, near ATH) suggests the market is pricing in a beat. Key watch: guidance on enterprise hiring budgets for FY outlook-any weakness will punish this extended level.
KEY RISK
Thesis invalid on a close below \$83.00 (lower bound of the tight base), or if September 9 earnings disappoint on revenue guidance, signalinghiring budgets remain constrained. With only 12 days to earnings, this is a high-beta binary event-gap risk is real.
ANALYSIS
Disconfirming: RS line not at new high (downgrades from A), and prox_52w at 98.6% means limited runway to breakout-most of the move is already in. Additionally, staffing is a cyclical industry highly sensitive to macro; current Risk-On regime favors mega caps over SMID cyclicals (IWM underperforming SPY by 1.7%). The 12-day earnings catalyst is binary-coin flip, not edge. Base_tight 1.98 is textbook, rs_vs_spy +18.6 is solid, but the proximity to ATH pre-earnings and lack of RS confirmation keep this at B. Conviction: Medium-solid technical setup but crowded into a binary event with limited upside surprise potential.

ANALYSIS

CATALYST / TODAY'S DRIVER

Energy sector leadership (+5.1% vs SPY this week) is lifting oilfield services on crude strength and rig count recovery. Forward catalyst: November 4 earnings (68 days out) will show North American completion activity trends; intermediate catalysts include weekly Baker Hughes rig count prints and any OPEC+ production policy shifts affecting drilling budgets.

BUSINESS & POSITION

Cactus manufactures wellhead and pressure control equipment for onshore oil and gas drilling, with particular strength in unconventional shale plays. The company benefits from North American rig count expansion and has exposure to international markets providing geographic diversification.

FACTOR & THEME

Directly tied to North American drilling activity and global energy infrastructure investment. Current crude oil strength (WTI elevated) and natural gas supply tightness support incremental rig additions. However, theme is mature-cycle (not early discovery)-energy has already outperformed significantly, and oilfield services are late-cycle beneficiaries that lag commodity moves.

BREAKOUT SIGNAL

Close above \$69.65 on vol >168% of 20d avg

INSTITUTIONAL

Volume 1.68x is modestly elevated but not institutional surge territory. No insider buying in last 90 days is a yellow flag-management not adding at these levels suggests limited incremental conviction. Float 59.2M is reasonable for institutional liquidity. Energy sector leadership provides tailwind, but lack of insider signal and wide base (3.46, well above ideal <2.0) suggest this is sector beta, not alpha.

EARNINGS

EARNINGS IN 68D

EARNINGS CONTEXT

Next earnings November 4 (68 days). Consensus not provided; key metrics will be North American revenue growth, international mix, and margin trajectory as steel input costs stabilize. Cactus historically trades on rig count leading indicators and completion activity rather than absolute oil prices.

KEY RISK

Thesis invalid on a close below \$66.00 (20-day MA support zone), or on any WTI crude breakdown below \$70 that would trigger E&P capex cuts and rig count declines, directly impacting Cactus order flow.

ANALYSIS

Disconfirming: Base_tight at 3.46 is loose (far from VCP quality), RS line not at new high, and prox_52w at 94% leaves limited breakout runway. Energy sector leadership is a tailwind, but WHD is a beta play within that sector-not a category leader or innovator. Zero insider buying despite stock near 52W high suggests management sees fair value here, not compelling upside. Rs_vs_spy +18.4 is solid and sector rotation provides near-term support, but the wide base and lack of insider conviction keep this as a B-grade momentum follow vs. an A-grade breakout. Conviction: Medium-sector tailwind is real, but technical setup is average and catalyst path to November is long with no intermediate triggers.

Signal: Close above \$69.65 on vol >168% of 20d avg

Vol vs Avg: 1.68x
