CATALYST INTELLIGENCE	
EARNINGS	
Oct 29 - Street expects ~\$1.28 EPS on ~\$740M revenue. TTM earnings growth of 447% reflects acquisition integration (Stavola Industries). Last 4 quarters show consistent beats; guidance maintained at analyst day. No near-term catalyst within 2 weeks - earnings 83 days out.	
BUSINESS & POSITION	
Arcosa manufactures infrastructure-related products across three segments: Construction Products (aggregates, specialty materials), Engineered Structures (utility poles, wind towers, telecom), and Transportation Products (barge components, steel tanks). The company is a category leader in utility structures and aggregates with vertically integrated quarry assets providing durable competitive moats.	
FACTOR & THEME	
Direct beneficiary of IJIA infrastructure spending tailwinds, grid hardening capex cycle, and domestic reshoring of critical materials. Sentiment in infrastructure/reshoring themes remains constructive with peer names (MLM, VMC, MTZ) showing steady institutional accumulation.	
NEWS FLOW	
Completed Stavola acquisition integration driving Construction Products margin expansion. Grid modernization spending accelerating with utility capex budgets up 15% YoY. No imminent corporate catalyst but secular tailwind intact. Catalyst type: Industry (Med impact) - infrastructure bill flow-through continues but next earnings print is distant.	
INSTITUTIONAL	
Volume dry-up is textbook (598K 659K 896K contracting to 0.44x avg) indicating quiet institutional accumulation into the base. No insider activity in last 60 days (baseline for industrial names). Float is tight at 48M shares with \$7B market cap suggesting limited incremental seller pressure.	

KEY RISK

Thesis invalid on a close below the \$142.00 base low (~2% below current) or on guidance cut signaling infrastructure project delays; aggregates pricing pressure in a recession would compress margins.

Textbook VCP structure with base_tight 1.24, strict vol contraction confirmed, price 0.8% from pivot - institutional-quality coil. Infrastructure theme tailwind intact but no catalyst within 2 weeks (earnings 83d away) slightly reduces urgency. Strongest disconfirming argument: RS line not at new high and small-cap leadership negative (-0.4%) creates macro headwind for SMID breakouts. Conviction: Medium

CATALYST INTELLIGENCE

EARNINGS

Aug 06 - Just reported (Aug 6). Pre-revenue biotech - P/E inapplicable; P/B 8.1x reflects growth-stage premium. No EPS consensus meaningful; focus is on cash runway and clinical milestones. Monitor for updated creto trial data readouts and regulatory pathway updates post-print.

BUSINESS & POSITION

CG Oncology is a clinical-stage biotech developing cretostimogene grenadenorepvec (creto), an oncolytic immunotherapy for bladder cancer. Lead program targets non-muscle invasive bladder cancer (NMIBC) with BCG-unresponsive patients - a high unmet need population with limited treatment options and strong FDA engagement.

FACTOR & THEME

Taps biotech innovation cycle theme with focus on bladder cancer, an underserved oncology niche. FDA breakthrough therapy designation potential and GLP-1-adjacent sentiment rotation into oncology innovators provides thematic support. Peer read-through: IMVT and RXRX rallies show appetite for differentiated oncology platforms.

NEWS FLOW

Earnings just released - watch for clinical update or partnership commentary on the call. 22.3% short interest with 9.4 days-to-cover creates squeeze setup if positive catalyst emerges. Potential PDUFA timeline for creto BLA could be major 2027 catalyst. Catalyst type: Corporate (High impact) - post-earnings reaction and any trial updates are the key near-term drivers. MASSIVE INSIDER ACTIVITY: \$24.8M single insider buy in last 60 days (insider_cluster 7) signals extreme conviction - this is top-decile insider signal.

INSTITUTIONAL

The \$24.8M insider purchase is a top-tier conviction signal - one of the largest open-market buys in biotech SMID-caps this quarter. This upgrades the setup materially. Volume dry-up (793K 916K 953K) with price holding near highs suggests accumulation. High short interest (22.3%) creates reflexive squeeze potential on positive news.

KEY RISK

Thesis invalid on close below \$70.00 (base low/50-day MA area) or on negative clinical data readout for creto; binary FDA risk on any trial setback could gap stock 30%+ lower.

GRADE UPGRADED from B to A due to insider_cluster 7 (\$24.8M insider buy) combined with risk-on regime. Vol dry-up confirmed, base_tight 1.63, pivot proximity 1.9% - strong VCP structure. Post-earnings positioning with massive insider conviction and 22% short interest creates asymmetric squeeze setup. Strongest disconfirming argument: Binary clinical risk in biotech means any negative creto data could invalidate thesis regardless of technicals; RS line not at new high. Conviction: High

Target: \$32.00 (measured move to analyst target zone and prior resistance)
Stop: \$22.80 (below breakout pivot and 10-day MA)

CATALYST INTELLIGENCE
EARNINGS
Jul 29 - Just reported Q2 (Jul 29). Revenue growth 21.5% signals clonoSEQ commercial traction. Still unprofitable (EPS -\$0.40 TTM) but loss narrowing (fwd EPS -\$0.18). Focus is on path to profitability inflection and Genentech milestone payments. No near-term earnings catalyst - just reported.
BUSINESS & POSITION
Adaptive Biotechnologies is the leader in immune-driven medicine, using its proprietary immune sequencing platform to decode T-cell and B-cell receptor data. Core products include clonoSEQ (FDA-cleared MRD test for blood cancers) and immunoSEQ for research/pharma partnerships, with Genentech partnership for TCR-based therapeutics.
FACTOR & THEME
Positioned at intersection of precision diagnostics, AI/ML in healthcare, and oncology innovation themes. Sentiment in diagnostics accelerating post-COVID as liquid biopsy and MRD testing gain oncology standard-of-care adoption. Peer read-through: EXAS, GH showing institutional rotation into diagnostic innovators.
NEWS FLOW
Q2 earnings showed continued clonoSEQ adoption with 21.5% revenue growth. Genentech partnership milestones remain potential catalyst for 2H26. MRD testing gaining Medicare coverage expansion which drives volume. Catalyst type: Corporate (Med impact) - partnership milestones and coverage decisions are key. No insider activity in last 60 days.
INSTITUTIONAL
RS line at 52-week high (+75.4% vs SPY) is the strongest relative strength in this candidate set - institutional sponsorship clearly present. Vol dry-up partial (vol_dryup_strict false) but price holding at highs. Float is large (125M) so moves require real institutional commitment. 9.1% short interest with improving fundamentals creates squeeze potential.

KEY RISK
Thesis invalid on close below \$23.00 (prior pivot/breakout level) or if Genentech partnership milestones delayed; high debt/equity (272%) and continued losses require monitoring of cash runway.
RS line at new high is the standout feature - strongest relative strength in the set. However, vol_dryup_strict is false (vol contraction only 1.9%), base_tight 2.97 is loose for A-grade, and just reported earnings means no near-term catalyst. Setup needs another week of tightening to merit A consideration. Strongest disconfirming argument: Wide base (2.97) and lack of strict vol contraction suggests potential for failed breakout; high beta (2.09) amplifies downside. Conviction: Medium

Stop: \$89.00 (below base low and psychological \$90 level)

CATALYST INTELLIGENCE
EARNINGS
Aug 10 - Earnings in 3 days - HIGH VOLATILITY EVENT. Pre-revenue biotech with negative forward P/E (-39.7x) - valuation reflects growth-stage premium; P/E inapplicable. Focus will be on cash position, clinical trial updates, and partnership discussions. This is a binary event window.
BUSINESS & POSITION
Oruka Therapeutics is a clinical-stage biotech developing biologics for chronic skin diseases, with lead candidates targeting psoriasis and atopic dermatitis. The company's differentiated antibody platform aims for best-in-class efficacy and dosing convenience in the competitive immunology space.
FACTOR & THEME
Taps dermatology/immunology biotech theme which has shown durable investor interest (peer names HZNP, acquired; DICE showing strength). GLP-1 adjacent as obesity drugs create halo for inflammation-focused biotechs. Sentiment constructive but competitive landscape crowded.
NEWS FLOW
Earnings Aug 10 is the immediate catalyst - any clinical update or partnership news could move stock significantly. 22.3% short interest with 5.0 days-to-cover creates squeeze setup into earnings. Stock has rallied from \$12.84 low to \$98+ (7x move) - momentum is extreme. Catalyst type: Earnings (High impact) - binary event in 3 days.
INSTITUTIONAL
Extreme RS (+47.9% vs SPY) and vol dry-up (617K 900K 971K contracting) suggest institutional accumulation into earnings. High short interest (22.3%) creates reflexive upside potential. No insider activity in last 60 days. Institutional ownership data unavailable from this feed.

KEY RISK
Thesis invalid on close below \$90.00 or on any negative clinical commentary at earnings; base_tight 3.18 is loose and 7x move from lows means significant profit-taking risk on any disappointment.
Earnings in 3 days creates binary event risk that precludes A-grade despite strong vol dry-up and RS. Base_tight 3.18 is loose (>2.0 threshold), and the 7x run from lows means significant mean-reversion risk if earnings disappoint. Position sizing must reflect binary nature. Strongest disconfirming argument: Extended stock (7x from lows), loose base, and earnings binary risk mean this is a coin-flip event rather than a high-probability VCP breakout. Conviction: Low (event-dependent)

Target: \$48.00 (analyst target \$47; measured move to prior resistance)
Stop: \$39.80 (below base low and 50-day MA)

CATALYST INTELLIGENCE
EARNINGS
Oct 22 - Street expects ~\$1.00 EPS. Earnings growth 835% YoY reflects prior year's low base from rate shock. Forward P/E 10.4x is attractive vs peers. Revenue growth 35.8% driven by Sandy Spring acquisition. Earnings 76 days out - no near-term catalyst.
BUSINESS & POSITION
Atlantic Union Bankshares is a Virginia-based regional bank with \$24B+ in assets, serving commercial and retail customers across the Mid-Atlantic. Strong deposit franchise and disciplined credit culture position it as a quality regional in the post-SVB environment.
FACTOR & THEME
Regional bank theme remains mixed - NIM expansion tailwind from higher rates partially offset by CRE concentration concerns. Peer read-through: KRE ETF stabilizing but not leading; quality regionals (CBSH, PNFP) outperforming. Sentiment cautious but improving.
NEWS FLOW
Sandy Spring Bancorp acquisition integration ongoing - synergy realization is key 2H26 driver. No recent contract wins or regulatory events. Regional bank sector watching Fed rate trajectory closely. Catalyst type: Industry (Low impact) - no imminent catalyst, sector-dependent. No insider activity in last 60 days.
INSTITUTIONAL
Vol dry-up textbook (812K 856K 1.38M contracting to 0.47x avg) with price holding suggests quiet accumulation. Short interest 7.1% with 5.6 days-to-cover is elevated for a regional. No insider activity - baseline for banks. Institutional ownership data unavailable.
KEY RISK
Thesis invalid on close below \$40.00 (base low area) or on CRE credit deterioration in Mid-Atlantic markets; integration execution risk on Sandy Spring acquisition.

Solid VCP structure with base_tight 1.85 and strict vol contraction, but pivot 4.3% away (outside 3% A-grade threshold) and RS line not at new high. Regional bank theme lacks immediate catalyst (earnings 76d away) and sector sentiment is neutral. Strongest disconfirming argument: CRE exposure in a slowing economy could trigger credit concerns; no catalyst within 2 weeks means being early is same as being wrong. Conviction: Low

Base_tight 6.69 is extremely loose (only 2 days in base), disqualifying from A/B despite strong vol contraction. Infrastructure theme supportive but setup too early - needs 2+ weeks to form proper base. Conviction: Low
