## ANALYSIS

### CATALYST / TODAY'S DRIVER

Q3 earnings report drove the breakout with likely beat and improved guidance as enterprise UCaaS spending accelerates. Forward catalyst path: Q4 earnings in late January 2027 (~90d out) where management will guide FY2027, plus any enterprise partnership or AI integration announcements as the company pivots toward AI-powered contact center and collaboration tools.

### BUSINESS & POSITION

RingCentral is a leading cloud-based unified communications (UCaaS) and contact center platform serving mid-market and enterprise clients. The company competes with Zoom, Microsoft Teams, and legacy telcos, differentiated by its all-in-one platform and robust API ecosystem for workflow integration.

### FACTOR & THEME

Enterprise digital transformation and cloud migration tailwinds. The UCaaS market is consolidating around leaders as hybrid work remains structurally embedded. RNG also benefits from early AI integration (sentiment analysis, agent assist) in contact centers-an accelerating theme as enterprises prioritize customer experience automation.

### BREAKOUT SIGNAL

Close above $83.92 on vol >2.49x of 20d avg

### INSTITUTIONAL

Volume 2.49x average on the earnings pop signals institutional participation in the breakout. Float at 72.6M and $7B market cap places RNG squarely in growth fund territory. No recent insider buying, but the RS line hitting new highs is Qullamaggie's #1 signal that smart money is rotating in ahead of the crowd. Watch for 13F filings next quarter to confirm new fund entries.

### EARNINGS

REPORTED

### EARNINGS CONTEXT

Q3 report yesterday (Oct 22). Consensus and actual figures not provided in data, but the 5.67% gap-up on 2.5x volume strongly suggests a beat with raised guidance. Q4 print expected late January 2027.

### KEY RISK

Thesis invalid on a close back below $79.50 (approximate breakout pivot), or if Q4 guidance disappoints due to elongated enterprise sales cycles. Competitive pressure from Microsoft bundling Teams could compress margins-monitor churn metrics and net retention rate closely.

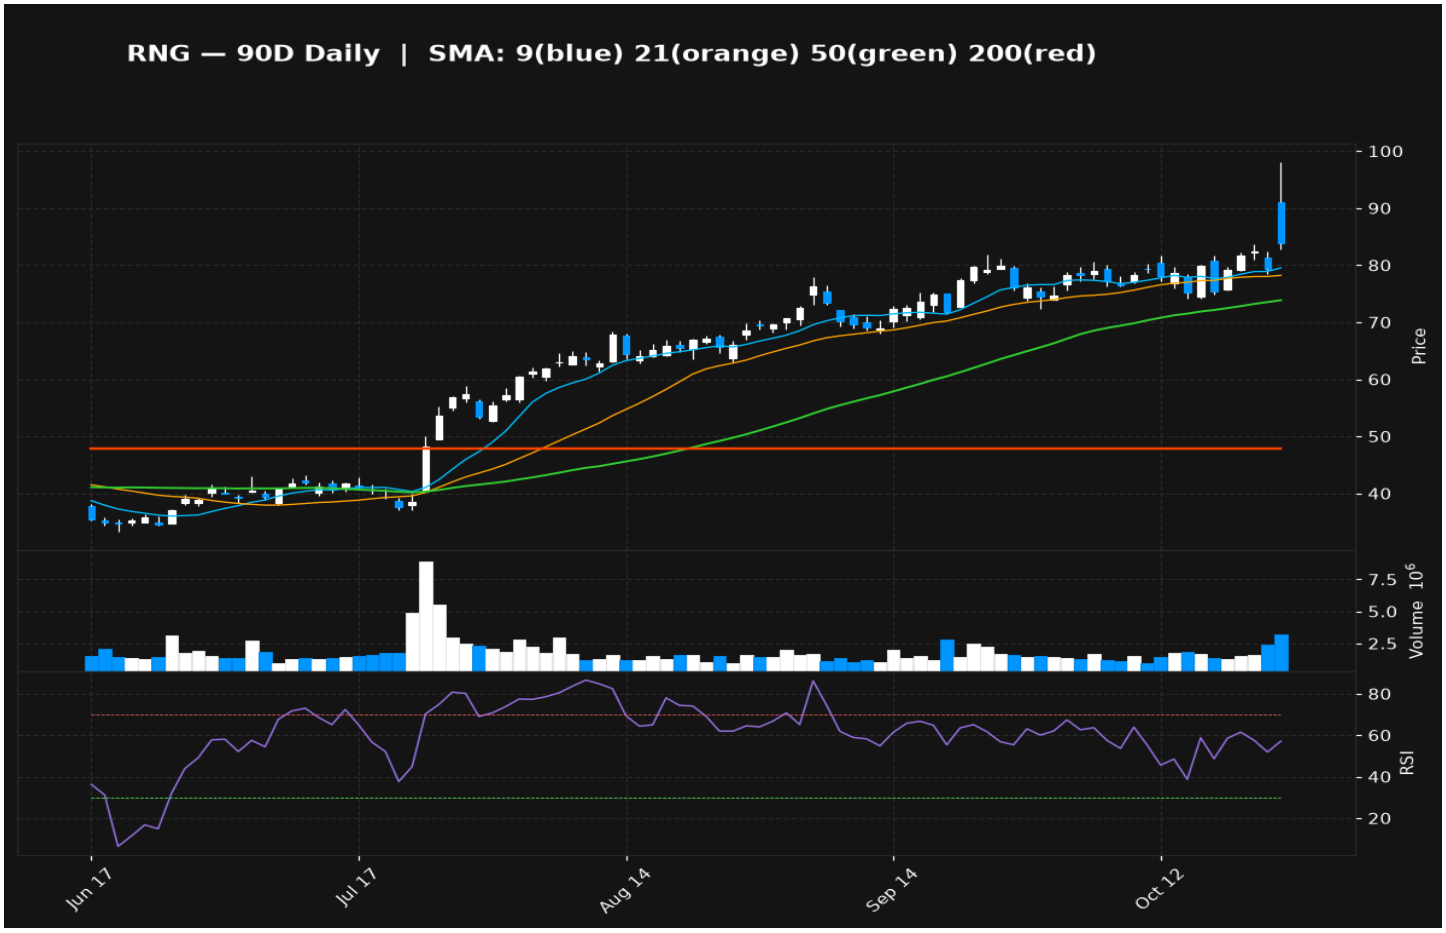

### ANALYSIS

Textbook post-earnings breakout with five A-grade criteria met: vol >2x, prox_52w 85.5 (breakout zone), rs_line_new_high (elite leadership signal), rs_vs_spy +44.8 (massive outperformance), and base_tight 2.11 (near VCP threshold). Disconfirming evidence: base_tight is slightly above ideal 2.0, and the mixed/transitional macro regime creates follow-through risk for all setups. However, the RS line at new highs + extreme relative strength override macro concerns-this is a name institutions are chasing. Forward catalyst (Q4 earnings in 90d) provides runway. Conviction: High.

**Signal: Close above $83.92 on vol >2.49x of 20d avg**

## ANALYSIS

### CATALYST / TODAY'S DRIVER

Explosive 22.4% earnings gap driven by a Q3 beat and likely guidance raise signaling a turn in the staffing cycle-historically RHI gaps hard when white-collar hiring inflects. Forward catalyst: Q4 earnings in late January 2027 will test whether the recovery is sustainable, plus any incremental employment data (BLS, ADP) or Fed commentary on labor tightness over the next 8-12 weeks that confirms the inflection.

### BUSINESS & POSITION

Robert Half is the largest specialized staffing firm in the U.S., placing finance, accounting, technology, and legal professionals on temporary and permanent assignments. The company is a direct barometer of white-collar hiring demand and operates with high operating leverage to cyclical turns.

### FACTOR & THEME

Employment cycle recovery and potential soft-landing narrative. If the Fed pivots dovish or unemployment stabilizes without recession, staffing names re-rate sharply. RHI also benefits from structural shifts toward flexible labor as enterprises shed fixed headcount post-pandemic. However, the thesis is purely cyclical-any hard-landing fears kill the trade immediately.

### BREAKOUT SIGNAL

Close above $46.11 on vol >2.68x of 20d avg

### INSTITUTIONAL

Volume 2.68x on a 22% gap is significant institutional participation-this is not retail FOMO. The RS line hitting new highs confirms smart money anticipation ahead of the turn. Float at 89.7M provides liquidity for funds. No insider buying in the data, but at this stage of a cyclical inflection, insiders often sit out (they can't trade on material cycle knowledge). Monitor 13F filings for new fund initiations.

### EARNINGS

REPORTED

### EARNINGS CONTEXT

Q3 reported yesterday (Oct 22). The 22% gap strongly implies a large earnings beat and raised guidance-likely first positive guide in multiple quarters as staffing demand inflects. Q4 earnings expected late January 2027.

### KEY RISK

Thesis invalid on a close back below $40.00 (approximate pre-gap support), or if subsequent employment data (jobless claims, JOLTS, ADP) deteriorates, signaling false inflection. Staffing is a high-beta, low-margin business-any whiff of recession kills the multiple. The base_tight of 7.89 (wide, choppy consolidation) suggests this was NOT a clean setup pre-gap; the entire thesis rides on the earnings catalyst being durable.

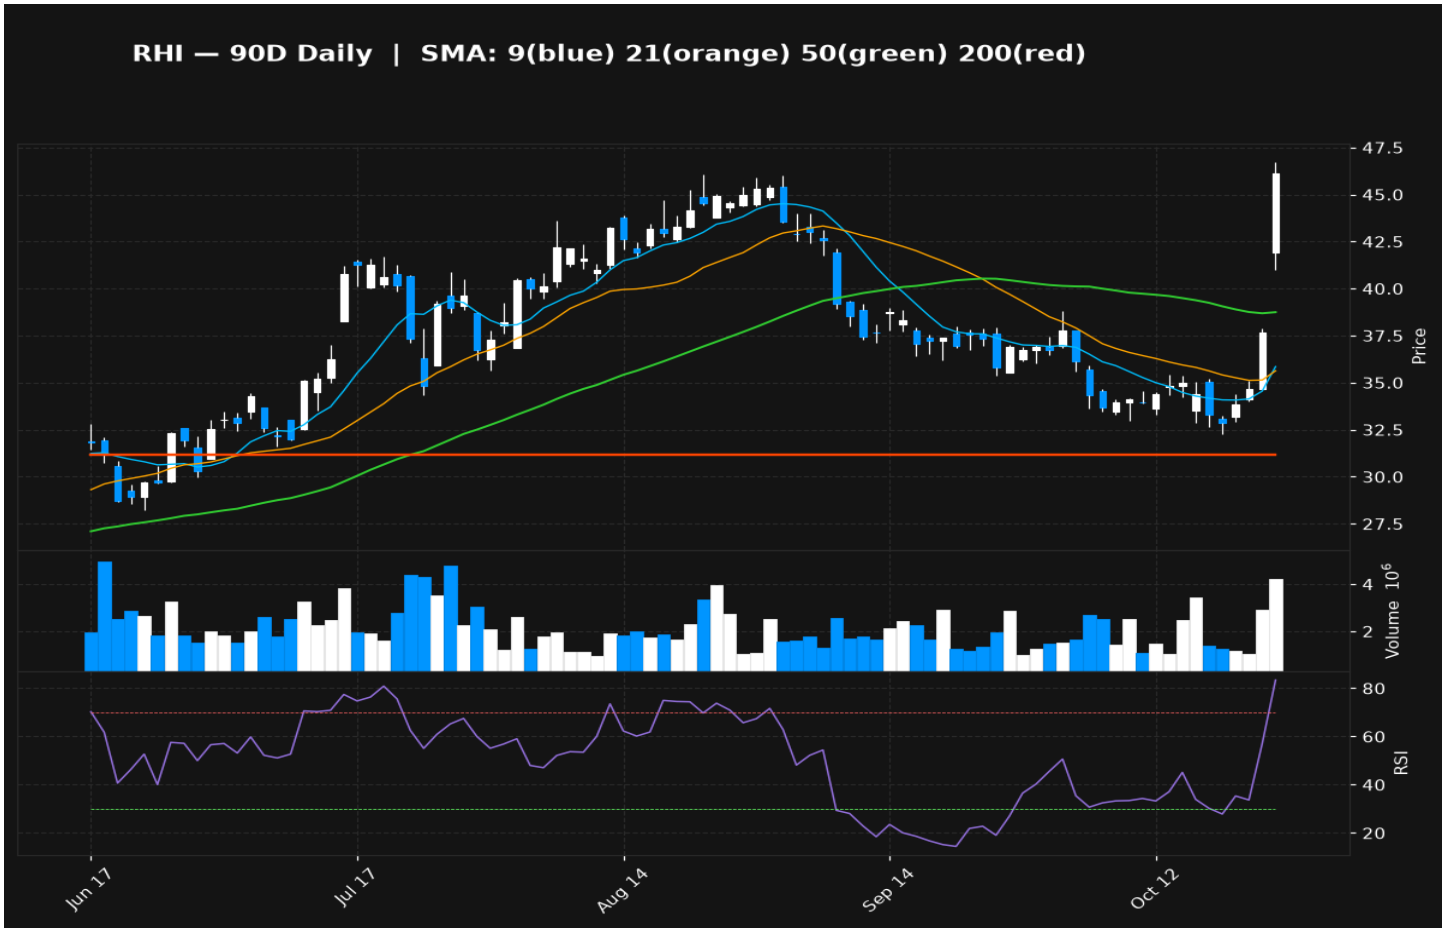

### ANALYSIS

Massive earnings gap with RS line new high and vol >2.5x meets multiple A-grade technical criteria, but the base_tight of 7.89 (well above 2.0 threshold) disqualifies it-this was a wide, sloppy base, not a VCP coil. The setup is purely catalyst-driven (earnings gap) rather than a clean technical breakout. Disconfirming evidence: staffing is a late-cycle sector, and the mixed macro regime means this could be a head-fake if the recovery stalls. The thesis requires validation from subsequent employment data and Q4 guidance in 90 days. Conviction: Medium.

## ANALYSIS

### CATALYST / TODAY'S DRIVER

Q3 earnings yesterday (Oct 22) drove a 5.5% gap, likely on a beat and favorable reserve development or improved combined ratio. Forward catalyst path is weak: next earnings in late January 2027 (~90d), but P&C insurance lacks event-driven catalysts between prints. Potential tailwinds from catastrophe bond issuance or rate-hardening commentary, but no near-term binary events to extend the move.

### BUSINESS & POSITION

Selective Insurance is a regional property & casualty insurer focused on commercial lines (small to mid-sized businesses) with a disciplined underwriting culture. The company competes on service and loss-ratio discipline rather than scale, earning a premium valuation in hard-market cycles.

### FACTOR & THEME

Insurance rate hardening and potential catastrophe-driven reinsurance tightness. P&C carriers benefit from rising premiums and lower loss ratios as climate risk reprices. However, the sector is defensive and rate-sensitive-rising rates compress book value. Theme momentum is decelerating as the hardest part of the rate cycle has passed.

### BREAKOUT SIGNAL

Close above $96.80 on vol >2.93x of 20d avg

### INSTITUTIONAL

Volume 2.93x on the earnings gap shows institutional participation, but the RS line is NOT at new highs (rs_line_new_high=false) and rs_vs_spy is barely positive at +0.1-this stock is moving in line with the market, not leading it. No insider buying. Float at 55.7M is moderate. Likely a tactical earnings trade rather than a durable momentum setup.

### EARNINGS

REPORTED

### EARNINGS CONTEXT

Q3 reported Oct 22. The 5.5% gap suggests a beat, likely on combined ratio improvement or premium growth. Selective has historically been a steady operator but not a serial beater that re-rates materially. Q4 earnings expected late January 2027.

### KEY RISK

Thesis invalid on a close back below $92.00 (approximate pre-gap support), or if catastrophe losses spike in Q4 (hurricane season tail risk). The lack of RS leadership (rs_vs_spy +0.1, rs_line_new_high=false) means this is a sector-relative trade, not a market leader-any rotation out of financials kills follow-through.

### ANALYSIS

Strong volume and proximity to 52W high (95.6) on an earnings gap meet some A-grade criteria, but rs_line_new_high=false and rs_vs_spy barely positive (+0.1) disqualify it-this is not a market leader. The base_tight of 6.37 (wide) confirms this was not a VCP setup. Disconfirming evidence: P&C insurance is a defensive, rate-sensitive sector with no meaningful forward catalyst path beyond the next quarterly print in 90 days. In a mixed/transitional macro regime, defensive rotations are noise, not durable trends. Conviction: Low.

**Signal: Close above $96.80 on vol >2.93x of 20d avg**

**Vol vs Avg: 2.93x**
