Target: \$185.00 (measured move: \$16 base depth added to pivot, ~10% upside)
Stop: \$152.00 (base low, -4.7% from current)

CATALYST INTELLIGENCE
EARNINGS
October 29 - Forward P/E 12.0x on \$13.25 EPS estimate vs TTM \$6.79 - implies 95% earnings growth. Revenue growth 14.7%, earnings growth 76.0%. PEG 1.01 suggests fair value at current growth rates. Beat history and guidance trend critical for breakout sustainability.
BUSINESS & POSITION
Insight Enterprises is a Fortune 500 IT solutions provider offering hardware, software, and cloud services to enterprises. The company acts as a value-added reseller and systems integrator, positioned at the intersection of enterprise IT refresh cycles and AI infrastructure deployment.
FACTOR & THEME
Direct play on enterprise AI adoption as companies upgrade infrastructure for GenAI workloads. Technology sector leading (+7.5%), providing strong macro tailwind. Peer CDW reported solid results; NSIT benefits from similar enterprise spending dynamics with smaller-cap alpha potential.
NEWS FLOW
Enterprise IT refresh cycle accelerating as companies deploy AI-ready infrastructure. No specific contract wins announced but sector momentum strong. Catalyst Type: Earnings (High impact) - 23 days to print positions this as actionable catalyst window. Watch for AI-related revenue commentary.
INSTITUTIONAL
Strong vol contraction (35.3%) with tight base (1.89) indicates disciplined institutional accumulation. Low float (28.8M) amplifies breakout moves. Institutional ownership data unavailable. No insider buying in last 60 days - absence notable given upcoming earnings but not disqualifying.

KEY RISK
Thesis invalid on close below \$152.00 (base low) or if Q3 guidance disappoints on AI-related project delays. 5.9% short interest with 4.1 days to cover creates modest squeeze potential but also reflects some skepticism.

Textbook VCP: base_tight 1.89, vol contraction 35.3% (strict confirmed), leading sector (Tech +7.5%), and earnings catalyst in 23 days. 5.6% to pivot is wider than ideal but compensated by structural quality and thematic alignment with AI infrastructure spend. Strongest disconfirming argument: RS line not at new high despite strong absolute RS (+31.2%) suggests this rally leg may be mature. Target price at \$163.75 implies Street sees limited upside - breakout requires estimate revisions. Conviction: High.

Target: \$98.50 (measured move from 15-day base depth of ~\$11.60 added to pivot)

Stop: \$82.00 (base low, -5.6% from current)

CATALYST INTELLIGENCE

EARNINGS

November 03 - Forward P/E 5.9x on \$14.84 EPS estimate, TTM EPS \$17.13 reflects 699% earnings growth. Serial compounder with strong operational leverage when crack spreads cooperate. Watch for guidance on Hawaii market dynamics and refinery utilization rates.

BUSINESS & POSITION

Par Pacific operates refineries in Hawaii, Montana, Washington, and Wyoming, with integrated logistics and retail fuel distribution. The company is a regional refiner benefiting from geographic moats (Hawaii isolation, inland Rockies) that insulate margins from Gulf Coast competition.

FACTOR & THEME

Exposed to crack spread dynamics and West Coast/Hawaii refined product premiums. Energy sector lagging in current regime (-4.2% Utilities drag adjacent), but PARR's defensive geographic positioning and 56.8% revenue growth distinguish it from commodity-beta peers.

NEWS FLOW

No material contract wins or regulatory catalysts in last 60 days. High short interest (12.8%, 5.5 days to cover) creates squeeze potential if Q3 print beats. Catalyst Type: Earnings (High impact) - crack spread normalization or beat could trigger short covering rally.

INSTITUTIONAL

Volume dry-up with price holding near highs suggests quiet accumulation despite elevated short interest. Institutional ownership data unavailable from this feed. No insider buying in last 60 days - baseline for this name. Float rotation dynamics (48.7M float, ~1M avg daily vol) imply ~7 weeks to turn over float.

KEY RISK

Thesis invalid on close below \$82.00 (base low), or if crack spreads compress materially heading into Q3 print. Customer/geographic concentration in Hawaii (~40% of EBITDA) creates binary exposure to tourism trends.

Clean vol contraction with price 2.2% from pivot, but RS line not at new high and Energy sector lagging in large-cap-led risk-on regime. High short interest (12.8%) offers squeeze asymmetry, but 28-day earnings wait and no insider activity temper urgency. Strongest disconfirming argument: crack spreads are cyclical and forward P/E expansion from 5.1x to 5.9x implies Street already models margin normalization. Conviction: Medium.

PARR — 90D Base Setup | Pivot: \$88.83 (gold) | SMA: 9(blue) 21(orange) 50(green) 200(red)

Target Pr.	\$93.50

ENTRY TRIGGER
Close above \$94.88 on volume >140% of 20-day average (~1.2M shares)
Target: \$108.00 (measured move from 20-day base, ~14% from pivot)
Stop: \$88.00 (base support, -7.1% from current)

CATALYST INTELLIGENCE
EARNINGS
November 19 - Forward P/E 14.8x on \$6.39 EPS estimate. TTM EPS negative (-\$4.83) reflects one-time charges; adjusted earnings trajectory positive. Guidance trend needs monitoring - Street at \$93.50 target implies limited upside consensus, creating beat-and-raise setup potential.
BUSINESS & POSITION
Atkore manufactures electrical conduit, cable management systems, and safety infrastructure for commercial construction and data centers. Category leader in PVC conduit with strong distribution relationships and reshoring tailwinds from domestic manufacturing buildout.
FACTOR & THEME
Direct exposure to data center capex (AI infrastructure), grid modernization, and IRA-driven electrification spend. Industrials sector neutral in current regime; peer read-through from HUBB and EMR shows electrical equipment names holding relative strength despite broader SMID weakness.
NEWS FLOW
No major contract announcements in last 60 days. Data center construction pipeline (MSFT, AMZN, GOOGL buildouts) provides secular demand backdrop. Catalyst Type: Earnings (Medium impact) - 44 days out reduces near-term urgency but positions for Q4 infrastructure spending commentary.
INSTITUTIONAL
Textbook accumulation signature: vol drying up to 0.49x today's ratio while price holds 0.2% from 52-week high. Institutional ownership data unavailable. No insider buying in last 60 days. Low short interest (4.0%, 1.9 days to cover) suggests limited squeeze fuel but also low crowding risk.

KEY RISK
Thesis invalid on close below \$88.00 (20-day base low area) or if data center capex guidance from hyperscalers disappoints. Construction cycle sensitivity and -98.4% TTM earnings growth (accounting noise) may spook momentum buyers.

Just 0.2% from pivot with confirmed vol dry-up - structurally ready to trigger. However, base_tight 3.55 is loose by A-grade standards, RS line not at new high, and 44-day earnings wait removes near-term catalyst. Strongest disconfirming argument: negative TTM EPS and -98.4% earnings growth headline will deter fundamental screens despite accounting-driven distortion. SMID headwind (-5.3% IWM vs SPY) adds friction. Conviction: Medium.

ENTRY TRIGGER
Close above \$120.00 on volume >160% of 20-day average (~1.0M shares)
Target: \$135.00 (measured move from base, prior resistance zone from early 2026)
Stop: \$108.00 (base low, -7.3% from current)

CATALYST INTELLIGENCE
EARNINGS
November 05 - Trailing P/E 7.4x on \$15.64 TTM EPS; forward P/E 18.1x on \$6.42 implies Street models significant rate normalization. 140.1% revenue growth and 373.1% earnings growth reflect peak cycle dynamics. Serial beater status critical - miss would confirm cycle turn.
BUSINESS & POSITION
International Seaways operates a fleet of crude and product tankers serving the international oil trade. The company benefits from tight tanker supply, aging global fleet, and geopolitical-driven trade route disruptions that extend voyage lengths and lift day rates.
FACTOR & THEME
Exposed to tanker rate volatility driven by OPEC+ decisions, refinery margins, and geopolitical trade flows. Energy sector underperforming (-4.2% Utilities drag), but INSW's RS line at new high (43.6% vs SPY) indicates stock-specific strength decoupling from sector beta.
NEWS FLOW
Tanker rates remain elevated on Red Sea disruptions and longer voyage routes. Fleet supply constrained by limited newbuild orders. Catalyst Type: Industry (Medium impact) - rate environment and Q3 utilization data drive near-term thesis. No company-specific news in last 60 days.
INSTITUTIONAL
RS line at new 52-week high is the strongest technical signal - institutional demand persists despite Energy sector headwinds. Vol pattern shows mid-week spike (607K 940K in W3) but overall contraction confirmed. No insider buying in last 60 days. High short interest (7.9%, 4.4 days) creates squeeze setup if rates hold.
KEY RISK
Thesis invalid on close below \$108.00 (14-day base low) or if tanker rates collapse on OPEC+ production increases or Red Sea normalization. Forward P/E expansion from 7.4x to 18.1x is the market pricing in mean reversion - any acceleration of that view kills the setup.

RS line at new high (only candidate with this distinction) signals institutional conviction, but base_tight 3.95 is loose and vol pattern shows mid-base spike rather than clean stair-step contraction. Energy sector lagging creates headwind. Strongest disconfirming argument: forward P/E 18.1x vs trailing 7.4x means the market is pricing in >50% earnings decline - this is a late-cycle play where timing the exit matters as much as entry. Conviction: Medium.

ENTRY TRIGGER
Close above \$204.40 on volume >150% of 20-day average (~1.1M shares)
Target: \$230.00 (measured move plus short squeeze premium, ~13% from pivot)
Stop: \$185.00 (base low, -7.5% from current)

CATALYST INTELLIGENCE
EARNINGS
November 03 - Forward P/E 23.7x on \$8.45 EPS estimate; PEG 3.41 reflects growth premium. TTM EPS \$5.77 with 16.1% earnings growth, 11% revenue growth. High short interest (13.8%, 5.1 days to cover) creates squeeze potential on beat-and-raise.
BUSINESS & POSITION
Qualys provides cloud-based security and compliance solutions, specializing in vulnerability management, web application scanning, and continuous monitoring. The company operates a capital-light SaaS model with 83% gross margins and serves enterprise customers requiring regulatory compliance.
FACTOR & THEME
Pure-play cybersecurity exposure benefiting from persistent threat environment and compliance mandates. Technology sector leading (+7.5%). Peer CRWD and S have shown strength; QLYS offers SMID alternative with cleaner balance sheet (9.5% debt/equity vs peers).
NEWS FLOW
Cybersecurity spending remains elevated on regulatory requirements (SEC cyber disclosure rules) and persistent threat landscape. No company-specific announcements in last 60 days. Catalyst Type: Earnings (High impact) - 28-day window with squeeze setup. Target price \$179.36 implies Street skepticism - upside surprise potential.
INSTITUTIONAL
RS line at new 52-week high despite 21.5% relative strength (lower than peers) suggests steady accumulation. Base_tight 5.37 is loose but RS line strength partially compensates. No insider buying in last 60 days. High short interest (13.8%) combined with improving fundamentals creates classic squeeze setup.
KEY RISK
Thesis invalid on close below \$185.00 (11-day base low) or if cybersecurity spending decelerates on enterprise budget cuts. PEG 3.41 is stretched - requires continued growth acceleration to justify multiple.

RS line at new high in leading Tech sector with high short interest (13.8%) creates asymmetric squeeze setup. However, base_tight 5.37 is the loosest among candidates and vol pattern shows W3 spike (523K 914K) disrupting clean contraction. Strongest disconfirming argument: Street target \$179.36 is 10% BELOW current price - consensus is actively bearish, and beating that skepticism requires material estimate revisions. Conviction: Medium.

Close above \$232.17 on volume >200% of 20-day average (~220K shares)

Target: \$250.00 (measured move from tight base, prior resistance zone)

Stop: \$220.00 (base low, -3.6% from current)

CATALYST INTELLIGENCE

EARNINGS

November 06 - Trailing P/E 25.7x on \$8.89 TTM EPS; forward P/E 530.9x on \$0.43 forward EPS indicates major earnings cliff or accounting anomaly - likely one-time gain in TTM period. Earnings growth 67.1% is backward-looking; forward estimates require scrutiny.

BUSINESS & POSITION

National HealthCare operates skilled nursing facilities, assisted living centers, and homecare programs across the southeastern U.S. The company benefits from aging Baby Boomer demographics and Medicaid/Medicare reimbursement stability in a fragmented industry ripe for consolidation.

FACTOR & THEME

Defensive healthcare services exposure with demographic tailwind. Healthcare sector slightly positive (+0.3%) in current regime. Low beta (0.61) provides portfolio ballast but limits upside velocity in risk-on environments.

NEWS FLOW

No significant news flow in last 60 days. Senior care facilities benefit from tight labor markets easing and occupancy recovery post-COVID. Catalyst Type: Earnings (Medium impact) - 31 days out. Watch for reimbursement rate commentary and occupancy trends.

INSTITUTIONAL

Tight base (1.82) with clean vol contraction suggests patient accumulation in thin-float name (12.7M). Low RS vs SPY (+3.0%) indicates this is a defensive rotation play rather than momentum setup. No insider buying in last 60 days. Low short interest (5.4%) but high days-to-cover (7.3) on thin volume.

KEY RISK

Thesis invalid on close below \$220.00 (base low) or if forward EPS guidance confirms earnings cliff implied by \$0.43 estimate. Forward P/E of 530.9x is a major red flag requiring explanation - either data error or material earnings decline ahead.

Excellent structural quality: base_tight 1.82 (best among candidates), clean vol contraction (strict confirmed), 1.7% from pivot. However, RS vs SPY only +3.0% (weakest in group), Healthcare sector barely positive, and forward P/E anomaly (530.9x) raises fundamental questions that could derail breakout. Strongest disconfirming argument: the forward EPS collapse from \$8.89 TTM to \$0.43 implies either a one-time gain reversal or material business deterioration - this needs resolution before conviction can increase. Conviction: Low.

ENTRY TRIGGER

Close above \$112.94 on volume >150% of 20-day average (~1.1M shares)

Target: \$130.00 (measured move plus profitability re-rate potential, ~15% from pivot)

Stop: \$100.00 (base support, -9.6% from current)

CATALYST INTELLIGENCE	
EARNINGS	
November 03	- Unprofitable: TTM EPS -\$0.60, forward EPS \$1.28 implies path to profitability. Forward P/E 86.2x reflects growth premium; P/S 7.9x is primary valuation metric. 41.1% revenue growth is compelling. Guidance on profitability timeline is the key variable.
BUSINESS & POSITION	
Xometry operates an AI-driven marketplace connecting buyers with manufacturers for on-demand custom parts production. The platform uses machine learning for instant quoting and supplier matching, benefiting from reshoring trends and supply chain diversification away from China.	
FACTOR & THEME	
Pure-play reshoring beneficiary with AI/ML platform differentiation. Industrials sector neutral but XMTR's tech-enabled model commands premium multiples (P/S 7.9x). Theme sentiment accelerating as tariff/supply chain concerns persist into 2027 planning cycles.	
NEWS FLOW	
Reshoring momentum continues with manufacturing investment announcements. No company-specific contracts in last 60 days, but platform volume likely benefiting from trend. Catalyst Type: Earnings (High impact) - 28 days to print; profitability inflection would be transformational for multiple.	
INSTITUTIONAL	
RS line at new 52-week high despite Industrials sector neutrality - strong stock-specific signal. Vol pattern shows W2 spike (752K 1022K) before contraction, less clean than ideal. No insider buying in last 60 days. 8.5% short interest with 7.3 days to cover creates squeeze setup on profitability news.	
KEY RISK	
Thesis invalid on close below \$100.00 (psychological support, 10-day base area) or if path to profitability pushed out. Growth-stage company with -3.8% net margin requires continued revenue acceleration to justify valuation.	

RS line at new high with thematic tailwind (reshoring) and earnings catalyst in 28 days. However, base_tight 4.9 is loose, vol pattern shows mid-base spike, and unprofitability (P/E inapplicable) limits buyer universe. Strongest disconfirming argument: 86.2x forward P/E on a still-unprofitable company in a SMID-lagging regime requires exceptional execution - any guidance disappointment triggers multiple compression. Conviction: Medium.

ENTRY TRIGGER

Close above \$35.83 on volume >120% of 20-day average (~3.5M shares)

Target: \$40.00 (measured move to Street target zone at \$38.71, plus squeeze premium)

Stop: \$33.50 (base low, -5.0% from current)

CATALYST INTELLIGENCE

EARNINGS

Last reported August 25, 2026. Forward P/E 20.3x on \$1.74 EPS estimate; PEG 0.61 suggests undervaluation if growth sustains. 80% earnings growth masks low base; 9.2% revenue growth is the true speed limit. Next earnings likely late November - no verified date available.

BUSINESS & POSITION

Box provides cloud content management and collaboration software for enterprises, enabling secure file sharing, workflow automation, and AI-powered content intelligence. The company competes with Microsoft SharePoint and Dropbox in a maturing but sticky enterprise market.

FACTOR & THEME

Cloud collaboration exposure with emerging AI content features. Technology sector leading (+7.5%). However, BOX is a mature SaaS player with 9.2% revenue growth - lacks the hypergrowth profile that drives momentum in risk-on Tech rallies.

NEWS FLOW

No material announcements in last 60 days. Enterprise content management market stable but not accelerating. High short interest (15.3%, 5.6 days to cover) creates squeeze potential but reflects persistent skepticism about growth trajectory. Catalyst Type: None imminent - next earnings 6+ weeks out.

INSTITUTIONAL

Vol contraction confirmed but base_tight 3.92 is loose. High short interest (15.3%) is the most elevated among candidates - could fuel squeeze but also signals fundamental concerns. Negative book value (P/B -13.8x) reflects accumulated deficits. No insider buying in last 60 days.

KEY RISK

Thesis invalid on close below \$33.50 (18-day base low) or if enterprise IT spending slows. 379% debt/equity and negative book value create balance sheet risk if growth stalls. No near-term catalyst identified.

Setup lacks identifiable forward catalyst - earnings already reported, next print 6+ weeks away. High short interest (15.3%) creates squeeze potential but without a catalyst, this is a hope trade. RS line not at new high in leading sector is a negative divergence. Conviction: Low.

CATALYST INTELLIGENCE
EARNINGS

October 28

Exceptional structural quality: base_tight 1.57 (tightest in group), 42.5% vol contraction (highest). However, Real Estate sector lagging (-5.3%), RS vs SPY weak (+4.0%), and forward P/E anomaly (599.8x on \$0.11 EPS) raises red flags similar to NHC. Worth monitoring for sector rotation but no alpha angle today. Conviction: Low.
