ANALYSIS
CATALYST / TODAY'S DRIVER
Stock breaking out to new 52W high on +80% RS vs SPY, likely tied to accelerating AI-for-drug-discovery theme momentum and institutional positioning ahead of Q3 print. Forward catalyst: Nov 4 earnings (48d out) - if management guides to accelerating software adoption or announces new pharma partnerships, this extends materially.
BUSINESS & POSITION
Schrodinger provides physics-based computational platform for drug discovery, licensing software to biopharma and running internal pipeline programs. The company sits at the intersection of AI/ML and life sciences R&D, a category seeing explosive investor interest post-2024 AI boom.
FACTOR & THEME
Direct play on AI infrastructure applied to biopharma R&D and the broader computational biology wave. Theme momentum is accelerating: pharma cos are racing to embed AI tools, and Schrodinger's physics-based approach is differentiated vs pure ML models. Sector rotation into Healthcare tech is also tailwind.
BREAKOUT SIGNAL
Close above \$28.81 on vol >547% of 20d avg
INSTITUTIONAL
5.5x volume surge on a +20% day with RS line at new 52W high is classic institutional breakout buying. No insider buying in last 60d, but the technical price/volume action is unambiguous: real money is chasing this into the Nov 4 print. Float rotation (57M shares, \$2.15B cap) suggests room for further accumulation.
EARNINGS
EARNINGS IN 48D
EARNINGS CONTEXT
Next report Nov 4. Consensus not provided in data; recommend checking for EPS/revenue trajectory and whether SDGR has a serial beat history - if so, institutional buyers are positioning for a re-rate on the print.
KEY RISK
Thesis invalid on a close back below the \$26.50 pivot (prior consolidation high) or any disappointing software bookings guidance on Nov 4 - the premium valuation (likely high P/S given pre-profit stage) requires sustained growth acceleration.
ANALYSIS
Five A-grade criteria met: vol >5x, prox_52w 99.3, rs_line_new_high true, rs_vs_spy +80.7, sector (Healthcare tech) has AI tailwind. Disconfirming evidence: base_tight is wide at 7.4 (volatile, not a textbook coil), and no insider buying - suggests this is purely technical/thematic momentum, not internal conviction. But the RS leadership (+80 vs SPY) and breakout to new high on monster volume override. Positioned ahead of Nov 4 earnings with strong thematic wind. Conviction: High.
Signal: Close above \$28.81 on vol >547% of 20d avg
Vol vs Avg: 5.47x

MGNI

Magnite, Inc.

\$25.35

+6.60%

RS vs SPY: +39.6%

ANALYSIS
CATALYST / TODAY'S DRIVER
Breaking out from a tight base (1.95 ATR) on 2.5x volume with RS line at new high, likely on sector rotation into Communications (+1.4% vs SPY this week) and optimism around programmatic ad spend recovery. Forward catalyst: Nov 4 earnings - if MGNI guides to accelerating CTV (connected TV) growth or raises full-year outlook, the stock extends; also watch for any M&A chatter in the consolidating ad-tech space.
BUSINESS & POSITION
Magnite is the largest independent sell-side ad platform (SSP), connecting publishers to programmatic demand. The company is levered to CTV advertising growth, a secular shift as linear TV spend migrates to streaming, and benefits from ongoing consolidation in ad tech.
FACTOR & THEME
Direct exposure to digital advertising recovery and CTV secular growth. Theme momentum is accelerating: ad budgets are shifting to programmatic/streaming, and MGNI is a pure-play beneficiary. Communications sector outperformance this week (+1.4%) adds tailwind.
BREAKOUT SIGNAL
Close above \$25.35 on vol >251% of 20d avg
INSTITUTIONAL
2.5x volume on a +6.6% move with RS line at new high and base_tight 1.95 signals institutional accumulation into a clean setup. No insider buying in last 60d, but the technical action (tight coil, breakout on volume) is textbook fund buying. Float is large (141M), so this needs sustained inflows, but the setup quality supports follow-through.
EARNINGS
EARNINGS IN 48D
EARNINGS CONTEXT
Next report Nov 4. MGNI has historically been volatile around prints; check for beat history and whether management has credibility on guidance. A positive CTV growth outlook or margin expansion narrative could re-rate the stock.
KEY RISK
Thesis invalid on a close back below \$24.00 (base pivot) or any guidance cut on Nov 4 - ad-tech names live and die by forward outlook, and macro ad-spend softness would kill the rally.
ANALYSIS
Four A-grade criteria met: vol >2x, prox_52w 94.5, rs_line_new_high true, base_tight 1.95 (VCP-quality), rs_vs_spy +39.6. Sector (Communications) is leading this week, earning +0.5 bump. Disconfirming evidence: no insider buying and float is large (institutional but also means crowding risk if sentiment turns). However, the tight base + RS leadership + volume surge + sector tailwind make this a high-probability follow-through into Nov 4. Conviction: High.
Signal: Close above \$25.35 on vol >251% of 20d avg
Vol vs Avg: 2.51x

PBLS

Parabilis Medicines, Inc.

\$39.89

ANALYSIS
CATALYST / TODAY'S DRIVER
Stock up 8% on 2.2x volume near 52W high, driven by insider cluster (6 buys, \$6.9M in last 60d) signaling internal conviction ahead of potential clinical data or pipeline update. Forward catalyst: Nov 12 earnings (56d out) - if PBLS provides positive Phase 2/3 readout timing or partnership/licensing deal color, the stock extends; also monitor for any FDA interaction disclosures or investor day scheduling.
BUSINESS & POSITION
Parabilis is a clinical-stage biotech focused on novel therapeutics (check specific pipeline focus - likely oncology or rare disease given cap and insider activity). The company's premium valuation and insider buying cluster suggest internal belief in near-term value inflection, likely tied to clinical milestones.
FACTOR & THEME
Biotech sector play with binary clinical catalyst risk/reward. Thematic momentum in biotech is mixed (not a leading sector currently), but company-specific catalysts (trial data, partnerships) can override macro. The \$6.9M insider buying cluster is a rare and powerful signal that management sees asymmetric upside.
BREAKOUT SIGNAL
Close above \$39.89 on vol >220% of 20d avg
INSTITUTIONAL
Insider cluster of 6 buys totaling \$6.9M in last 60d is top-tier conviction - this is the single strongest bullish signal in the dataset. Per GRADE UPGRADE RULE: insider_cluster = 7 (>= 5 threshold) upgrades this from B to A. Volume 2.2x on +8% confirms institutional interest aligning with insider conviction. Float 82M allows room for further accumulation.
EARNINGS
EARNINGS IN 56D
EARNINGS CONTEXT
Next report Nov 12. For clinical-stage biotech, the earnings call is often a forum for pipeline updates and trial timeline guidance. Check if PBLS has a history of using earnings to disclose data or partnerships - if so, the setup into Nov 12 is strong.
KEY RISK
Thesis invalid on a close back below \$37.50 (base support) or any negative clinical trial update / delay in expected milestones. Biotech is binary: insider buying is bullish, but if the science disappoints, the stock can collapse 30%+ in a session.
ANALYSIS
Initially a B-grade setup (vol >2x, prox_52w 94.5, rs_vs_spy +52, base_tight 2.35, but rs_line_new_high = false and only 3 of 5 criteria met). However, insider_cluster = 7 (6 buys, \$6.9M) triggers GRADE UPGRADE RULE A. Disconfirming evidence: RS line not at new high and biotech theme not leading macro - this is a stock-specific, catalyst-driven setup, not a sector-momentum play. But the insider buying is the rarest and most predictive signal in fundamental analysis; when C-suite or directors deploy \$7M in open market, they know something. Conviction: High, but with binary risk - size accordingly.
Signal: Close above \$39.89 on vol >220% of 20d avg
Vol vs Avg: 2.2x

CRD-B

Crawford & Company

\$12.30

+8.95%

ANALYSIS
CATALYST / TODAY'S DRIVER
Breaking out on 3.3x volume from a textbook tight base (1.76 ATR) with RS line at new high, likely on improved claims volume outlook or cost efficiency narrative. Forward catalyst: Nov 2 earnings (46d out) - if CRD reports margin expansion or guides to accelerating revenue from natural disaster / commercial claims activity, the setup extends.
BUSINESS & POSITION
Crawford is a claims management and outsourcing provider to insurance carriers and self-insured entities. The company benefits from elevated claims activity (weather events, commercial insurance hardening) and ongoing digitization of claims workflows.
FACTOR & THEME
Play on insurance sector tailwinds: hard pricing environment for commercial P&C, elevated natural catastrophe activity driving claims volume, and outsourcing trend as carriers seek cost efficiency. Theme is defensive and steady, not explosive, but the tight technical setup and RS leadership suggest institutional interest.
BREAKOUT SIGNAL
Close above \$12.30 on vol >332% of 20d avg
INSTITUTIONAL
3.3x volume surge on +9% with RS line at new high and base_tight 1.76 (VCP-quality coil) is institutional buying. No insider activity in last 60d, but the technical quality is unambiguous. Small float (22.6M) means limited supply - if funds are accumulating, the stock can move quickly.
EARNINGS
EARNINGS IN 46D
EARNINGS CONTEXT
Next report Nov 2. Check if CRD has a history of beating estimates and whether margins are expanding (operating leverage from digital claims platforms). A positive outlook on claims activity or cost savings could drive a re-rate.
KEY RISK
Thesis invalid on a close back below \$11.50 (base pivot) or any disappointing margin guidance on Nov 2 - the stock's premium (near 52W high) requires execution and positive forward outlook.
ANALYSIS
Four A-grade criteria met: vol >3x, prox_52w 90.5, rs_line_new_high true, base_tight 1.76 (textbook VCP), rs_vs_spy +16.8. Disconfirming evidence: sector (Financial Services / Insurance) is not a leading theme this week, and absolute RS vs SPY is modest (+16.8, not explosive). However, the technical setup quality (tight base, RS line new high, volume surge) is institutional-grade. Small float (22.6M) adds squeeze potential. Conviction: Medium - clean setup, but sector and theme are not in favor; this is a stock-specific breakout, not a macro wave.
Signal: Close above \$12.30 on vol >332% of 20d avg
Vol vs Avg: 3.32x

Inst. Own	- (data lag)

ANALYSIS
CATALYST / TODAY'S DRIVER Moving higher on 2.1x volume as stock approaches breakout zone (85% of 52W high), likely on improving sentiment around life sciences capex recovery and flow cytometry adoption. Forward catalyst: Nov 4 earnings (48d out) - if CTKB reports accelerating instrument placements or expanding pharma/biotech customer base, the stock breaks out; also watch for any major account wins or FDA clearances.
BUSINESS & POSITION Cytek manufactures advanced flow cytometry instruments (Aurora platform) for life sciences research and clinical diagnostics. The company is levered to recovery in biopharma R&D spending and adoption of high-parameter flow cytometry, a category seeing secular growth.
FACTOR & THEME Exposure to life sciences tools recovery and biopharma capex cycle. Theme momentum is mixed (biotech/pharma capex has been under pressure, but starting to stabilize). CTKB's differentiated spectral flow cytometry tech positions it well if R&D budgets re-accelerate.
BREAKOUT SIGNAL Close above \$5.26 on vol >213% of 20d avg
INSTITUTIONAL 2.1x volume on +6.6% near breakout zone (prox_52w 85) suggests institutional interest building. No insider buying in last 60d, and base_tight is wider at 3.15 (not a textbook coil), so this is early-stage accumulation, not a fully formed breakout. Float is large (102.9M), requiring sustained inflows.
EARNINGS EARNINGS IN 48D
EARNINGS CONTEXT Next report Nov 4. Check if CTKB has beaten estimates recently and whether instrument placement growth is accelerating. A positive outlook on pharma/biotech capex or international expansion would be bullish.
KEY RISK Thesis invalid on a close back below \$4.90 (20MA support) or any guidance disappointment on Nov 4 - the stock is approaching breakout but hasn't broken out yet; if fundamentals don't support the move, it fails.
ANALYSIS Three B-grade criteria met: vol >2x, prox_52w 85 (breakout zone), rs_vs_spy +37.3, above 20MA+50MA. Disconfirming evidence: rs_line_new_high = false (RS not confirming leadership), base_tight 3.15 (wider than ideal), and no insider buying. This is a strong follow-through candidate but lacks the institutional confirmation (RS line new high) to earn A-grade. The setup is building toward Nov 4 earnings; if the print is strong, it breaks out cleanly. Until then, it's a B. Conviction: Medium.
Signal: Close above \$5.26 on vol >213% of 20d avg Vol vs Avg: 2.13x

ANALYSIS
CATALYST / TODAY'S DRIVER
Stock approaching 52W high on 1.7x volume, likely on anticipation of Phase 3 COMP360 (psilocybin for treatment-resistant depression) trial updates or regulatory pathway clarity. Forward catalyst: Nov 3 earnings (47d out) - if CMPS provides positive enrollment update, FDA interaction readout, or partnership discussions, the stock breaks out; also monitor for any European regulatory news (EMA).
BUSINESS & POSITION
COMPASS is developing COMP360 psilocybin therapy for treatment-resistant depression, the leading candidate in the psychedelic medicine category. The company is in Phase 3 trials, with potential FDA approval pathway in 2027-2028 if data support.
FACTOR & THEME
Play on psychedelic medicine theme, which has seen renewed investor interest post-2023 as FDA signals openness to novel psychiatric therapies. Binary risk/reward tied to clinical trial success and regulatory approval. Theme is niche but high-conviction among specialized biotech investors.
BREAKOUT SIGNAL
Close above \$14.96 on vol >174% of 20d avg
INSTITUTIONAL
1.7x volume on +8.4% near 52W high suggests institutional positioning ahead of Nov 3 print. No insider buying in last 60d, and RS line not at new high (rs_line_new_high = false) downgrades conviction. Base_tight 2.36 is decent but not VCP-tight. This is a momentum follow-through play into a catalyst, not a confirmed breakout.
EARNINGS
EARNINGS IN 47D
EARNINGS CONTEXT
Next report Nov 3. For clinical-stage biotech, the earnings call is often the venue for trial updates. Check if CMPS has a pattern of disclosing enrollment milestones or regulatory interactions on calls - if so, the setup into Nov 3 is strong.
KEY RISK
Thesis invalid on a close back below \$14.00 (base support) or any negative trial update / enrollment delay. Psychedelic medicine is high-beta and binary; if the FDA pathway becomes unclear or trial data disappoint, the stock can collapse 40%+ rapidly.
ANALYSIS
Three B-grade criteria met: vol >1.5x, prox_52w 94.3, rs_vs_spy +17.3, base_tight 2.36. Disconfirming evidence: rs_line_new_high = false (RS not confirming), volume only 1.7x (not explosive), and no insider buying. This is a catalyst-driven setup into Nov 3 earnings, not a pure technical breakout. The psychedelic theme is niche and volatile. It's a solid B-grade follow-through if you have conviction in the Phase 3 story, but it lacks the institutional confirmation for A-grade. Conviction: Medium, with high binary risk.
Signal: Close above \$14.96 on vol >174% of 20d avg

ANALYSIS
CATALYST / TODAY'S DRIVER
Up 7.9% on 3.6x volume, likely on renewed firearms demand (election-cycle buying, concealed-carry law changes) or inventory restocking by distributors. Forward catalyst: Oct 28 earnings (41d out) - if RGR reports strong consumer demand, margin expansion, or new product traction, the setup extends; also watch for any policy news (2nd Amendment / ATF regulation headlines can drive firearm stocks).
BUSINESS & POSITION
Sturm Ruger manufactures firearms for sporting, law enforcement, and personal protection markets. The company benefits from cyclical demand tied to political/regulatory uncertainty and secular concealed-carry expansion in the U.S.
FACTOR & THEME
Exposure to defense / firearms theme, which can spike on political catalysts (election cycles, regulatory threats). Theme momentum is event-driven and not currently a leading macro trend. RGR is a pure-play on U.S. firearms demand, which is normalizing post-pandemic surge.
BREAKOUT SIGNAL
Close above \$40.00 on vol >355% of 20d avg
INSTITUTIONAL
3.6x volume on +7.9% is strong, but rs_vs_spy is negative (-2.0), meaning the stock is underperforming the market over 12 weeks. No insider buying in last 60d. This looks like a short-covering spike or event-driven pop, not sustained institutional accumulation. Small float (14M) means any buying can move it quickly, but lack of RS leadership is a red flag.
EARNINGS
EARNINGS IN 41D
EARNINGS CONTEXT
Next report Oct 28. Check if RGR has beaten estimates recently and whether firearm sell-through data (NICS background checks) support strong demand. A positive outlook on consumer demand or new product launches would be bullish.
KEY RISK
Thesis invalid on a close back below \$37.50 (prior consolidation) or any demand-softness guidance on Oct 28. RGR is cyclical and event-driven; without sustained demand or policy catalyst, the rally fades.
ANALYSIS
Mixed setup: vol >3x and prox_52w 83 are strong, but rs_vs_spy is negative (-2.0, underperforming SPY), rs_line_new_high = false, and base_tight 3.27 is wide. This is a tactical pop into Oct 28 earnings, not a confirmed momentum leader. Disconfirming evidence: the negative RS vs SPY is a major concern - the stock is not in sync with the market, suggesting the move is stock-specific (short cover, event-driven) rather than institutional accumulation. Sector (Defense) is not leading. Conviction: Low - this is a trade into Oct 28, not a position.
Signal: Close above \$40.00 on vol >355% of 20d avg
Vol vs Avg: 3.55x
