ANALYSIS

CATALYST / TODAY'S DRIVER

Current move driven by momentum in specialty pharma sector (+4.0% vs SPY this week). Forward catalyst (High/Corporate): Q2 earnings on August 12 will be critical for revenue trajectory and YUTREPIA commercial ramp guidance-next inflection for re-rating.

BUSINESS & POSITION

Liquidia develops and commercializes therapies for cardiovascular and metabolic diseases, including YUTREPIA for pulmonary arterial hypertension. The company competes in a specialized niche against Tyvaso DPI, positioning itself as a lower-cost, higher-efficacy alternative deserving of share gains if commercial execution delivers.

FACTOR & THEME

Healthcare sector leadership (+4.0% vs SPY) and biotech specialty pharma rotation provide tailwind. Theme momentum is accelerating into earnings season as investors position for growth inflections in underowned specialty names.

BREAKOUT SIGNAL

Close above \$87.04 on vol >210% of 20d avg

INSTITUTIONAL

Volume surge to 2.1x on a +7.6% day suggests institutional accumulation, though the absence of RS line at new high and the wide base (3.28 ATR range) indicate this is follow-through buying rather than pristine early-stage accumulation. No insider activity in last 90 days weakens conviction-management not visibly backing the move.

EARNINGS

EARNINGS IN 21D

EARNINGS CONTEXT

Next earnings August 12. Company is in commercial ramp phase; consensus and beat history not broadly available for this specialty name, but the proximity to earnings (21 days) creates binary event risk and potential for volatility on guidance revisions.

KEY RISK

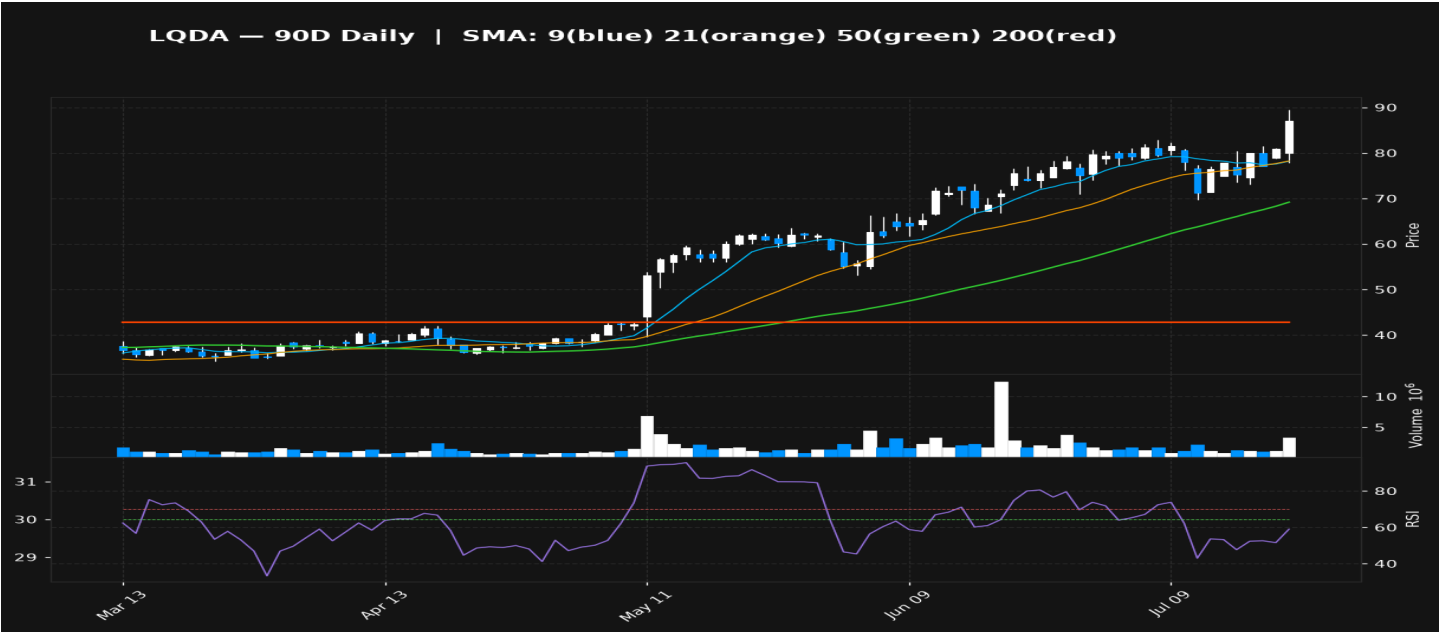

Thesis invalid on close below \$78.50 (prior consolidation support) or any negative revenue guidance / commercial traction miss at August 12 print.

ANALYSIS

Disconfirming evidence: RS line not at new high despite massive 12-week outperformance (+129.5%) and base is wide (3.28 ATR), suggesting the move has been choppy and not yet institutional-quality tight. The healthcare sector tailwind and proximity to earnings (21 days) support follow-through potential, but zero insider buying and failure to print RS line new high keep this a B rather than A. Conviction: Medium

Signal: Close above \$87.04 on vol >210% of 20d avg

Vol vs Avg: 2.1x

FBP

First BanCorp. New

\$28.86

+4.41%

RS vs SPY: +17.6%

B STRONG SETUP

\$4.5B Cap | 150M Float

Banks - Regional | Theme: Regional bank recovery | 52W Hi: 100% | Base Tight: 4.54 | Vol: 1.85x | RS/SPY: +17.6% | Above 20MA: YES

ANALYSIS

CATALYST / TODAY'S DRIVER

Current move driven by Financials sector leadership (+4.3% vs SPY this week) and regional bank rotation. Forward catalyst (Low/Macro): next earnings date unavailable from feed; sector tailwind from rate-cut expectations and credit-quality stability, but no company-specific event on the horizon to extend momentum.

BUSINESS & POSITION

First BanCorp is a regional bank serving Puerto Rico and the U.S. Virgin Islands, benefiting from economic recovery and deposit growth in its core markets. It competes as the leading franchise in an under-banked geography, deserving premium valuation if net interest margin expansion and credit trends hold.

FACTOR & THEME

Financials sector leadership (+4.3% vs SPY) and regional bank recovery theme provide near-term tailwind. However, theme momentum is decelerating as mega-cap leadership dominates (IWM/SPY -2.9%), creating crosswind for SMID financials.

BREAKOUT SIGNAL

Close above \$28.86 on vol >185% of 20d avg

INSTITUTIONAL

Volume at 1.85x with +4.41% gain on breakout to 99.9% of 52-week high suggests institutional participation, though the extremely wide base (4.54 ATR range) and absence of RS line new high indicate this is sector-driven rather than stock-specific accumulation. No insider buying in last 90 days-management not visibly confident at these levels. Float at 149.8M (near the upper limit) reduces agility for sustained momentum.

EARNINGS CONTEXT

Next earnings date not available from feed; recommend cross-referencing FactSet or Bloomberg for forward calendar and consensus estimates.

KEY RISK

Thesis invalid on close below \$27.50 (breakout pivot) or any sector reversal if Financials leadership fades and money rotates back to mega-cap growth.

ANALYSIS

Disconfirming evidence: Base is extremely wide (4.54 ATR) and RS line not at new high, signaling choppy accumulation rather than textbook coil. The Financials sector tailwind (+4.3%) is real, but with no identifiable forward catalyst and IWM/SPY deteriorating (-2.9%), this is a sector-trade follow-through, not a durable stock-specific setup. Conviction: Low

Signal: Close above \$28.86 on vol >185% of 20d avg

Vol vs Avg: 1.85x
