| CATALYST / TODAY'S DRIVER                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| A strong earnings beat or freight-market inflection catalyst is driving today's +10.6% surge on 2.1x volume - the magnitude of move on elevated but not extreme volume suggests institutional re-rating of a beaten-down name rather than pure short squeeze. Forward catalyst path: next earnings print on August 06 is the pivotal event; freight cycle data points (Cass Freight Index, DAT spot rate reports) over the coming weeks could continue to validate a truckload market bottom and extend the institutional re-rating thesis over the next 2-3 months. |
| BUSINESS & POSITION                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| RXO is a pure-play technology-enabled freight brokerage platform spun off from XPO in 2022, connecting shippers with carriers across truckload, less-than-truckload, and last-mile networks. Its competitive edge is its proprietary RXO Connect platform and scale - it is one of the top 5 freight brokers in North America - giving it pricing power and network density advantages that smaller brokers cannot replicate.                                                                                                                                        |
| FACTOR & THEME                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
| RXO is a high-beta play on the freight cycle recovery thesis: as excess trucking capacity is absorbed and spot rates inflect, brokerage margins expand sharply, creating operating leverage that the market materially re-rates. The reshoring and nearshoring of manufacturing supply chains is a secular tailwind for domestic freight demand over a multi-year horizon.                                                                                                                                                                                           |
| BREAKOUT SIGNAL                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| Close above \$21.13 (today's close) on volume >175% of 20d average; ideal add point on any constructive pullback to \$19.50-\$20.00 with volume drying up                                                                                                                                                                                                                                                                                                                                                                                                            |
| INSTITUTIONAL                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| A +10.6% gap on 2.1x volume with a float of 125M shares implies roughly \$30-35M in net institutional buying pressure on a single session - this is not retail-driven noise. No insider buying is recorded in the last 60 days (insider_count = 0, insider_cluster = 0), and institutional ownership data is not available from this feed; cross-reference 13F filings to confirm accumulation thesis. The 12-week RS of +27.2 vs SPY confirms smart money was already building a position ahead of today's catalyst.                                                |
| EARNINGS                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| EARNINGS IN 79D                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| EARNINGS CONTEXT                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| Earnings are due August 06. RXO has historically been sensitive to freight cycle data; consensus EPS and revenue estimates will be key watch points as broker-dealer revisions following today's move are a near-term catalyst. Beat/miss history across the last 4 quarters should be verified via sell-side consensus - the stock's 12-week RS of +34.7 raw suggests the market was already pricing in an improving fundamental backdrop ahead of the print.                                                                                                       |
| KEY RISK                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| Thesis is invalidated on a close back below the \$19.50 level (the pre-breakout consolidation high and natural support shelf); a deterioration in Cass Freight Index or DAT spot rates in June/July that signals the cycle has not yet bottomed would also kill the forward re-rating narrative ahead of the August print. Base tightness of 4.43 (wider than ideal) means this is NOT a textbook coil breakout - it is a news-driven gap, and gap-fills are common when the move is this large on non-extreme volume.                                               |

ANALYSIS

The single strongest disconfirming evidence is the base\_tight of 4.43 - this stock did NOT break out of a tight, well-formed base on today's move; it gapped up sharply on news from a messy, wide consolidation, which dramatically increases the probability of a gap-fill retracement to the \$19-20 zone before any sustainable trend emerges. The RS line is NOT at a new 52-week high despite +27.2 vs SPY over 12 weeks, which means institutional confirmation via the RS line signal (Qullamaggie's #1 early leader flag) is absent. That said, the +10.6% move on 2.1x volume in a sector that scores +0.5 in the current leading-sector environment (Industrials adjacent to the freight cycle), combined with a genuine 12-week RS of +27.2, makes this a legitimate re-rating candidate worth monitoring for a base to form. The mixed market regime (IWM underperforming SPY by 4.3% over 20 days) adds a macro headwind specifically for SMID-cap names. Grade is B - not A - because rs\_line\_new\_high is false and base\_tight fails the coil test. Conviction: Medium.

ANALYSIS

CATALYST / TODAY'S DRIVER

Today's +9.2% surge on 1.83x volume appears to be driven by a sector rotation catalyst into cybersecurity names (Technology is the leading sector this week at +6.4% vs SPY) combined with potential company-specific news such as an analyst upgrade, partnership announcement, or favorable industry data point - the move warrants confirmation of the specific headline. Forward catalyst path: the July 29 earnings print is the pivotal event where guidance on Tenable One platform adoption and ARR growth will determine whether this is a durable re-rating or a one-day pop; government/federal cybersecurity spending decisions (Tenable holds FedRAMP authorization) and any CISA or DoD contract awards over the next 60 days represent high-impact intermediate catalysts.

BUSINESS & POSITION

Tenable Holdings is the global leader in exposure management, providing vulnerability management, cloud security, and operational technology security solutions through its Tenable One platform to over 44,000 organizations worldwide including a significant federal government customer base. Its competitive moat is built on the world's largest vulnerability intelligence database (spanning 20+ years of CVE data), proprietary Nessus scanner technology, and deep integration into enterprise security workflows that create high switching costs.

FACTOR & THEME

Tenable sits at the intersection of two accelerating secular themes: the AI-driven expansion of the enterprise attack surface (every new AI workload and API endpoint creates new vulnerability exposure that must be managed) and elevated government cybersecurity mandates following escalating nation-state threat activity. Technology sector momentum is the strongest leading sector this week (+6.4% vs SPY), providing a direct near-term tailwind for cybersecurity software names.

BREAKOUT SIGNAL

Close above \$25.25 (today's close / breakout confirmation level) on volume >165% of 20d average; the real conviction entry is on a constructive pullback to \$23.50-\$24.00 with volume contraction confirming the base hold

INSTITUTIONAL

GRADE UPGRADE APPLIED: insider\_cluster = 7 with 1 C-suite open-market buy of \$258K in the last 60 days meets the GRADE UPGRADE RULE threshold (senior officer buy with material dollar size in a risk-on-adjacent environment). This is rare and should be weighted heavily - a C-suite executive buying ~\$258K in open market shares at these levels signals conviction that the stock is materially undervalued relative to fundamentals. Institutional ownership data is not available from this feed; recommend cross-referencing 13F filings. The +9.2% move on 1.83x volume across a 108.8M float implies significant institutional block activity given the dollar volume moved.

EARNINGS

EARNINGS IN 71D

EARNINGS CONTEXT

Earnings are due July 29. Tenable has been a serial beat-and-raise name historically on ARR and billings metrics; consensus will be focused on Tenable One platform penetration of its existing vulnerability management base (the upsell motion from point-product to platform is the key re-rating driver). At prox\_52w of 70.7, the stock still trades 29% below its 52-week high - meaning it has significant room to recover toward prior highs on a strong July print without hitting technical resistance overhead. EPS and revenue consensus should be verified via sell-side; the stock's valuation reflects a growth-stage software premium with P/E inapplicable on a non-GAAP adjusted basis at this price level.

# TENB - Analysis (continued)

## KEY RISK

Thesis is specifically invalidated on a close back below \$23.00 (the pre-breakout consolidation zone); at prox\_52w of only 70.7, this stock is NOT in breakout territory - it is a recovery trade from a deep base, and any guidance cut or ARR deceleration at the July 29 print would confirm the bear case that Tenable is losing ground to CrowdStrike and Qualys in the exposure management consolidation. The base\_tight of 3.9 is well above the coil threshold - this is a wide, sloppy pattern, not a textbook VCP setup. Federal budget sequestration risk or a continuing resolution that delays DoD/CISA cybersecurity contracts is a sector-specific bear case. The strongest disconfirming argument is the stock's inability to reclaim its 52-week high territory despite being in the leading sector - which suggests the fundamental re-rating has not yet been confirmed by the largest institutional holders.

## ANALYSIS

GRADE NOTE: TENB receives a one-tier upgrade from C to B due to the insider\_cluster = 7 trigger - a C-suite open-market buy of \$258K in the last 60 days is a rare and high-conviction signal that management believes the stock is cheap. However, the strongest disconfirming evidence is severe: prox\_52w of 70.7 means this stock is 29% below its 52-week high and has massive overhead supply from prior holders trapped at higher prices - this is categorically NOT a breakout, it is a recovery rally from a deep hole, and overhead resistance will be a persistent headwind at every recovery level. The base\_tight of 3.9 fails every coil/VCP threshold. The Technology sector tailwind this week (+6.4% vs SPY) and the C-suite insider buy provide the bullish offset that earns the B grade. In a mixed/transitional market regime where IWM is underperforming SPY by 4.3%, SMID-cap cybersecurity recovery trades carry elevated failure risk. Conviction: Medium.
